

**The Reach and Grasp of Policy Analysis: Comparative Views of the Craft.** By Richard L. Hofferbert. Tus-  
louse: University of Alabama Press, 1990. 192p.

Defining policy evaluation as the use of social science research to measure under what conditions public programs achieve their objectives (p. 4), Hofferbert draws

academic policy researcher  
in developing countries to  
ties and problems confronting

...his history of U.S. policy  
...since the halcyon "social engineering" years of  
...Johnson's Great Society and examines the active  
...policy research going on now with

which paper is directly familiar. Chapters 2 and 3 provide useful examinations of extension research in land grant universities, and practical challenges facing community-based researchers are discussed in sections of chapters 4 and 5.

university researchers engaged in public-program evaluation research. It is possible to derive from these chapters hypotheses that could be tested through surveys of university and other research centers. Part 2 contains the chapters on internationalization.

examines the obstacles and opportunities confronting the export of U.S. policy analysis methods and epistemic approaches to the analysis of developing and emerging economies, using previously published work as a starting point.

Hofferbert argues that political scientists engaged in policy research engage in either product or process research. While the former focuses on policy performance,

evaluating agencies, the latter has greater long-term utility to program administrators. Moreover process research also stands the best chance of enduring.

ing the discipline to policy analysis consumers, since it examines the relationship between the organization of authority as an independent variable and the accomplishment of policy objectives.

Hofferber asserts that the "green years" of Great Society optimism minimized the long- in relevance of the work of policy analysts cloistered in universities and removed from the political environment where social problems are being debated.

maximized their political vulnerability when social policies did not meet political expectations quickly – or decisively enough. This has resulted in the institutionalization of policy analysis in places out of sight of many political decisions. Within states and local governments,

While there is much to warrant such an interpretation, it is also clear that the rural extension centers, and similar places, however, policy research has flourished.

rising overhead to sustain policy research in traditional academic departments, the collocating of some policy analysis fields (e.g., environment and energy) into multidisciplinary research centers, and the fact that the social problems being researched require broader, institutionally

social problems being analyzed were larger than initially envisioned, as noted by observers such as John Schwarz in America's Hidden Success. (1988) may also have contributed to the apparent decline in support for social science-based or basic research.

Whether using firsthand experience in the evaluation of elderly services in New York state or applying contemporary policy analysis to evaluating Turkish economic development, students should be able to identify and explain the strengths and weaknesses of each approach.

resolution of tension between a disciplinary reward structure that often appears to penalize "practical" research.

Unfortunately, Hofferbert does not explore the phenomenonology of effective political science participation in policy research. As Hofferbert's cases illustrate, even university-based policy analysis is often conducted in interdisciplinary environments where project research agendas are established by several disciplines and methodologies and approaches are defended before committees unfamiliar with the idiosyncrasies of the researcher's discipline. Yet there is broad appreciation for the political variables responsible for policy success or failure. How are problems defined in such a context? How are research strategies developed to target these political variables in these environments effectively? This omission is ironic, since Hofferbert does explore the independence of political variables in successful policy implementation in developing countries with pluralistic political participation.

Other topics salient to the subject are also omitted, such as the rise of policy think tanks, both liberal and conservative, giving rise to rapid evaluations of existing public programs. The rise of these institutions may, in part, explain why, despite the decline in pure social science research dollars for studying social programs, the amount of policy analysis output (sometimes masquerading as objective scholarship) still arguably increases. One wishes that Hofferbert had generalized his analysis to permit a weighing of factors intrinsic to policy evaluation success, particularly in his discussion of extension research at land grant colleges where problem-oriented research has been conducted by social scientists in natural resource, economic development, and technology transfer policies. Taken as far as his cases permit, Hofferbert provides a good starting point for exploring these issues.

**Race and the Decline of Class in American Politics.** By Robert Huckfeldt and Carol Weitzel Kohfeldt Champagne-Urbana: University of Illinois Press, 1989. 205 p. \$27.50

The central arguments of this book deserve close study by both political scientists and political strategists. In addition to an account of the rise of race and the decline of class and income distribution as fundamental organizing themes of U.S. electoral politics, the authors develop original approaches to these problems: how to secure the representation and fundamental rights of blacks and other minorities, blunt and alleviate racial polarization in the party system, secure more effective representation of class, and prevent the withering away of the Democratic party.

An unusual book, replete with mathematical models and computer simulations (many readers will have tough going there), it also offers many pragmatic suggestions for restructuring the system. The analysis incorporates historical accounts and a well-documented quantitative data and is driven by a profound concern for the

played by testing in the nation's public school system has been increasing steadily and growing more complicated for more than 20 years. The Committee on Educational Excellence and Testing Equity (CEETE) was formed to monitor the effects of education reform, particularly testing, on students at risk for academic failure because of poverty, lack of proficiency in English, disability, or membership in population subgroups that have been educationally disadvantaged. The committee recognizes the important potential benefits of standards-based reforms and of test results in revealing the impact of reform efforts on these students. The committee also recognizes the valuable role graduation tests can potentially play in making requirements concrete, in increasing the value of a diploma, and in motivating students and educators alike to work to higher standards. At the same time, educational testing is a complicated endeavor that reality can fall far short of the model, and that testing cannot by itself provide the desired benefits. If testing is improperly used, it can have negative effects, such as encouraging school leaving, that can hit disadvantaged students hardest. The committee was concerned that the recent proliferation of high school exit examinations could have the unintended effect of increasing dropout rates among students whose rates are already far higher than the average, and has taken a close look at what is known about influences on dropout behavior and at the available data on dropouts and school completion. Interpretive Social Science Mark Bevir, Jason Blakely, 2018. This volume introduces and argues for the fundamental importance of an interpretive approach to explaining social and political reality.
