Egypt Karl Baedeker (Firm),1898 **Port Systems in Global Competition** César Ducruet,Theo Notteboom,2023-08-11 In a world where most international trade is carried by sea each port can be seen as a unique chokepoint competing to attract ever more traffic and economic activities However ports can also be seen as parts of a wider system which can be defined as a system of two or more ports located in proximity within a given area Their fate and governance is jointly influenced when belonging to the same region country or transnational space Investments shocks innovations and delays occurring in one port often affect other ports within a certain spatial range and time lapse Further understanding of such co developments in port systems is necessary to go beyond local specificities through a multidisciplinary and multi level contribution Port Systems in Global Competition is an answer to the strong and urgent need for reviewing the relevant theories concepts methods and sources that can be mobilized for the analysis of port systems With contributions from reputable scholars coming from no less than 11 countries in Europe Asia and North America this book delves into the analysis of port systems from diverse disciplinary angles geography regional science economics management engineering and mathematics computer sciences and covering innovative empirical approaches to various port systems in the world The theoretical and empirical knowledge can support and enhance decision making in relation with the development of ports supply chains and transport networks in general This book is an ideal companion to academics and upper level students interested in the analysis of transport and economic systems in general as well as the effective ways to answer complex issues in transportation and socio economic development It will be a valuable resource for those researching or studying transportation and supply chains maritime and port economics as well as regional development and human geography

Asymmetric Passive Components in Microwave Integrated Circuits Hee-Ran Ahn,2006-07-14 This book examines the new and important technology of asymmetric passive components for miniaturized microwave passive circuits The asymmetric design methods and ideas set forth by the author are groundbreaking and have not been treated in previous works Readers discover how these design methods reduce the circuit size of microwave integrated circuits and are also critical to reducing the cost of equipment such as cellular phones radars antennas automobiles and robots An introductory chapter on the history of asymmetric passive components which began with asymmetric ring hybrids first described by the author sets the background for the book It lays a solid foundation with a chapter examining microwave circuit parameters such as scattering ABCD impedance admittance and image A valuable feature of this chapter is a conversion table between the various circuit matrices characterizing two port networks terminated in arbitrary impedances The correct conversion has also never been treated in previous works Next the author sets forth a thorough treatment of asymmetric passive component design which covers the basic and indispensable elements for integration with other active or passive devices including Asymmetric ring hybrids Asymmetric branch line hybrids Asymmetric three port power dividers and N way power dividers Asymmetric ring

hybrid phase shifters and attenuators Asymmetric ring filters and asymmetric impedance transformers With its focus on the principles of circuit element design this is a must have graduate level textbook for students in microwave engineering as well as a reference for design engineers who want to learn the new and powerful design method for asymmetric passive components *Northern Guide* Zadock Thompson,1857 **Africa's Transport Infrastructure** Heinrich
