The Nature of Learning Disabilities Kenneth A. Kavale,Steven R. Forness,2012-12-06 The category of learning disabilities continues to be among the most contentious in special education Much of the debate and dissent emanates from a lack of understanding about its basic nature The failure to evolve a comprehensive and unified perspective about the nature of learning disabilities has resulted in the concept being lost The loss is best illustrated through the failure to answer this seemingly simple question What is a learning disability Using historical empirical theoretical conceptual and philosophical analyses this volume explores a number of problems and issues facing the field of learning disabilities The chapters cover historical influences definitional problems primary characteristics assessment practices theoretical development major themes research and measurement models and long term outcomes The goal is to explicate the nature of learning disabilities by analyzing what it was supposed to be what it has become and what it might be A predominant theme running through this text is the necessity for the field of learning disabilities to regain integrity by recapturing its essence *Handbook of Clinical QEEG and Neurotherapy* Thomas F Collura,Jon A. Frederick,2016-11-03 This book is an essential resource describing a wide range of approaches and technologies in the areas of quantitative EEG QEEG and neurotherapy including

neurofeedback and neuromodulation approaches It emphasizes practical clinically useful methods reported by experienced clinicians who have developed and used these approaches first hand These chapters describe how the authors approach and use their particular combinations of technology and how clients are evaluated and treated This resource which is encyclopedic in scope provides a valuable and broad yet sufficiently detailed account to help clinicians guide the future directions in client assessment and neurotherapeutic treatment Each contribution includes literature citations practical information related to clinical interventions and clinical outcome information Medical Subject Headings National Library of Medicine (U.S.),2001

Developmental Dyslexia Michael Thomson,1991-01-08 Long established as a set text for a number of training and diploma courses this book has been updated in response to new teacher training needs and to take account of developments in research and ideas on dyslexia which have occurred in recent years

Handbook of Children's Literacy Terezinha Nunes,Peter Bryant,2013-03-09 PETER BRYANT TEREZINHA NUNES The time that it takes children to learn to read varies greatly between different orthographies as the chapter by Sprenger Charolles clearly shows and so do the difficulties that they encounter in learning about their own orthography Nevertheless most people who have the chance to learn to read do in the end read well enough even though a large number experience some significant difficulties on the way Most of them eventually become reasonably efficient spellers too even though they go on make spelling mistakes at any rate if they are English speakers for the rest of their lives So the majority of humans plainly does have intellectual resources that are needed for reading and writing but it does not always find these resources easy to marshal What are these resources Do any of them have to be acquired Do different orthographies make quite different demands on the intellect Do people differ significantly from each other in the strength and accessibility of these resources If they do are these differences an important factor in determining children s success in learning to read and write These are the main questions that the different chapters in this section on Basic Processes set out to answer

Brain and Behavior in Child Psychiatry Aribert Rothenberger,2012-12-06 The Brain What Else All senses are connected with the brain From sense perception derives knowledge In the brain is the sovereignty of the mind Mind is interpreted by the brain Alcmaeon of Croton 5th Century B c The ground is shifting under the traditional approaches to problems in the philosophy of mind Earlier doctrines concerning the independence of cognition from the brain now appear untenable P S Churchland 20th Century A D It is not objective of this volume to discuss the history and significance of neuroscience for philosophy from a developmental perspective although this would be a rather interesting topic Its object is the relationship between brain and behavior in children as exhibited by higher mental functions e g speech and language reasoning perception free will and control of motor acts dependence of behavior on neuronal constraints the self of the child and therapeutic activities Child psychiatrists commonly allude to the brain as the site of disturbance responsible for many developmental disabilities and psychopathological syndromes identifiable by observing behavior e g dyslexia delusions neurological examination e g soft

signs psychological test performance e.g. Bender Gestalt Test EEG e.g. alpha theta ratio and CCT e.g. pseudoatrophy While there is nothing inherently wrong with such inferences the fact is frequently overlooked that there is no specific set of brain behavior relationships validating these inferences

Textbook of Developmental Pediatrics Marvin I. Gottlieb, Janice E. Williams, 2013-11-11 Child adolescent development and behavior have been a traditional concern of primary health care providers However it was not until the mid 1960s that attempts were made to consolidate developmental behavioral issues into an identifiably distinct fund of medical knowledge During the ensuing two decades developmental behavioral pediatrics was recognized as a clinical and research subspecialty within the framework of comprehensive health care for children The influence of public advocacy groups topic dedicated journals national professional specialty societies subject related continuing education programs and federal legislation PL94 142 has served to crystallize developmental behavioral pediatrics as a specialized field of study As a consequence during the past ten years significant modifications have restructured medical student and pediatric resident education providing an emphasis on developmental behavioral issues The focus on neurodevelopmental educational and psychosocial issues reflects changing priorities in traditional health care for children The postgraduate training of pediatric fellows in two and three year training programs was initiated to accommodate professional manpower needs in both academic and practice settings Many of the problems in childhood development and behavior frequently span the traditional areas of child neurology child psychiatry and general pediatrics As a result there has been some confusion in demarcating professional responsibilities in diagnosis and management as well as poorly defined terminology and classification schemas With the birth of developmental pediatrics as a pediatric specialty a more cohesive fund of knowledge has been accumulated and more meaningful strategies have been designed for prevention diagnosis and management

Visual Processes in Reading and Reading Disabilities Dale M. Willows, Richard Kruk, Evelyne Corcos, 2012-12-06 Over the last 25 years reading processes have been the focus of an enormous amount of research in experimental psychology as well as in other disciplines The theories and models emerging from this research have greatly advanced understanding of both normal acquisition and of reading disabilities Although great progress has been made there are certain aspects that have been relatively neglected in the current understanding Specifically the role of visual factors has received less attention than that of other component processes This is particularly surprising since reading and writing are distinct from the other language processes of speaking and listening in large part by virtue of the fact that a visual dimension is involved Relevant research is broadly scattered both geographically and in terms of disciplines and there have been no major reviews or books concerned with the visual dimension of reading and reading disabilities The purpose of this book is to bring together a broad range of evidence that concerns the role of visual information in reading and reading disabilities Because reading processes are of central interest to cognitive scientists neuropsychologists psycholinguists clinicians and educators this book should draw a very broad readership

Fluency in Reading Zvia Breznitz,2006-08-15 This is the first book to examine in depth the crucial role of the speed of information processing in the brain in determining reading fluency in both normal and dyslexic readers Part I explains fluency in reading from both traditional and modern perspectives Fluency has historically been viewed as the outcome of other reading related factors and has often been seen as a convenient measure of reading skills This book however argues that fluency has a strong impact on other aspects of reading and plays a central role in the entire reading process Part II deals with the determinants of reading fluency Chief among these is the speed of information processing in the brain Using both behavioral and electrophysiological evidence the book systematically examines the features of processing speed in the various brain systems involved in reading visual orthographic auditory phonological and semantic and shows how speed of processing affects fluency in reading Part III deals with the complex issues of cross modal integration and specifically with the need for effective synchronization of the brain processes involved in reading It puts forward the Synchronization Hypothesis and discusses the role of the Asynchrony Phenomenon as a major factor in dyslexia Finally it summarizes research on manipulating reading rate by means of the Acceleration method providing evidence for a possible intervention aimed at reducing Asynchrony Key features of this outstanding new book include Expanded View of Fluency Reading fluency is seen as both a dependent and an independent Variable Currently available books focus on reading rate solely as the outcome of other factors whereas this volume stresses that it is both an outcome and a cause Information Processing Focus Fluency itself is determined to a large extent by a more general factor namely speed of processing in the brain The book presents wide ranging evidence for individual differences in speed of processing across many subpopulations Brain Synchronization Focus The book posits a new theory arguing that effective reading requires synchronization of the different brain systems visual orthographic auditory phonological and semantic Research Based Interventions Interventions to enhance fluency and thereby reading skills in general are presented in detail Author Expertise Zvia Breznitz is Head of the Department of Learning Disabilities and Director of the Laboratory for Neurocognitive Research at Haifa University in Israel where she has been researching this topic for over a decade This book is appropriate for researchers and advanced students in reading dyslexia learning disabilities cognitive psychology and neuropsychology **Child Psychopathology, Second Edition** Eric J. Language Development and Neurological Theory Sidney J. Segalowitz, Frederic A. Gruber, 2014-05-10 *Language Development and Neurological Theory* presents a neuropsychological theory of language development The discussions are organized around the following themes cerebral specialization for language in normal and brain damaged individuals development of cerebral dominance and speech perception Much emphasis is placed on the issue of cerebral specialization or

lateralization Comprised of 20 chapters this volume begins with a review of some of the methods used to correlate neurophysiological and behavioral functions as well as some of the issues involved in trying to unite the empirical science of neuropsychology and the rationalist science of linguistics The next chapter deals with lateralization for speech sounds shown by young infants and possible factors in the sound signal responsible for the differentiation Subsequent chapters focus on asymmetries in young children during continuous verbal nonvisual and visual nonverbal story tasks the effects of multi language elementary school program on the degree of lateralization for language intramodal and cross modal pattern perception in stroke patients with lateralized lesions and visual half field asymmetries in deaf and hearing children Several hypotheses as to why language is lateralized to the left hemisphere rather than to the right are also examined This book is addressed to researchers and students of the neuropsychology of language whether they call themselves psychologists neuropsychologists neurologists or linguists
