Long Term Retention Of Knowledge And Skills:

The Long-Term Retention of Knowledge and Skills Marshall J. Farr, 2012-12-06 A INTRODUCTION AND BACKGROUND
2 This report reviews and interprets research on the nature and magnitude of the effects of those factors which influence how well knowledge and skills K 1 I am indebted to Dr Jesse Orlansky Institute for Defense Analyses for his encouragement and guidance through all phases of this report *The Long-Term Retention of Knowledge and Skills* Marshall J Farr, 1987-06-01 Learning and Memory of Knowledge and Skills Alice F. Healy, Lyle E. Bourne, 1995 By analyzing the results of experiments that use a wide variety of training tasks including those that were predominantly perceptual cognitive or motoric this volume answers such questions as Why do some people forget certain skills faster than others What kind of training helps people retain new skills longer Inspired by the work of Harry Bahrick and the concept of permastore the contributors explore the Stroop effect mental calculation vocabulary retention contextual interference effects autobiographical memory and target detection They also summarize an investigation on specificity and transfer in choice reaction time tasks In each chapter the authors explore how the degree to which reinstatement of training procedures during retention and transfer tests accounts for both durability and specificity of training Researchers and administrators in education and training will find important implications in this book for enhancing the retention of knowledge of skills You have to read this book Anyone interested in training will want to read it This book provides the theoretical bases of the acquisition of durable skills for the next decade It advances and demonstrates a new principle of skill learning that will prove to be as important as the encoding specificity principle and its corollary the principle of transfer appropriate processing This new principle is that highly practiced skill learning will be durable when the retention test embodies the procedures employed during acquisition This principle and the other important findings reported in this text will have a great impact on the evolution of memory theory and on the wide range of applications Douglas Hermann University of Maryland **The Long-Term Retention of Knowledge and Skills**, 1998 We received three classes of guidelines we found to optimize long term retention The first class concerned ways to optimize the conditions of training We discussed three general guidelines in this class The first concerned the contextual interference found for example with random sequences of tasks as opposed to fixed or predictable sequences The second concerned training parts of a task versus the whole task The third concerned the distinction between generating and reading The second class of guidelines concerned ways to optimize the strategies used We found that in tasks that require deliberate retrieval from memory training that promotes efficient encoding strategies maximizes long term retention The third class of guidelines concerned ways to attain direct access or automatic retrieval from memory We found in several domains that achieving automaticity requires extensive practice Further even when retrieval appears automatic after extensive practice mediators may still continue to exert their influence *Cognitive Plasticity in Neurologic Disorders* Joseph I. Tracy, Benjamin M. Hampstead, K. Sathian, 2015 This volume makes clear that the

cognitive and behavioural symptoms of neurologic disorders and syndromes are dynamic and changing Each chapter describes the neuroplastic processes at work in a particular condition giving rise to these ongoing cognitive changes *The Leadership Brain* David A. Sousa,2003-04-30 How can you use the growing body of research on how the brain learns to become a more effective leader Cognitive neuroscientists are gaining greater insights into how the brain interacts with and learns from the environment Now David A Sousa one of the foremost experts in translating this research into classroom practice examines the brain compatible leadership practices that sustain effective teaching and learning The Leadership Brain provides a new model for a whole brain approach to educational leadership Examining what we know about the adult brain and how to apply these lessons to effective school leadership and team management this powerful resource provides you with the necessary tools to Understand the differences in learning and retention left and right hemispheric preferences higher order thinking and the nature of creativity Initiate and lead productive change within your school Effectively shape and manage school culture Address the call for ethical and spiritual leadership Understand how thinking habits influence our actions especially with problem solving and conflict resolution Reduce misconceptions about students with disabilities gifted and minority students Use information about the influence that modern society has on student learning and their different expectations The Leadership Brain includes valuable self assessment tools resources and practical applications that will help instructional leaders develop a modern creative team centered school where all students and teachers can reach their full potential *Essential Guide to Generic Skills* Nicola Cooper,Kirsty Forrest,Paul Cramp,2008-04-15 This is a vital text to help you with the competency assessment in the UK Foundation Programme giving practical advice in an easy to follow format It advises new doctors on note keeping time management organisation communicating with colleagues the structure of the NHS and how to deal with the ethical and legal issues they face when on call Also looks at emotional intelligence learning styles or how different personality types can work together more effectively *The Handbook of Aging and Cognition* Fergus I. M. Craik,Timothy A. Salthouse,2011-03-15 Cognitive aging is a flourishing area of research A significant amount of new data a number of new theoretical notions and many new research issues have been generated in the past ten years This new edition reviews new findings and theories enables the reader to assess where the field is today and evaluates its points of growth The chapters are organized to run from reviews of current work on neuroimaging neuropsychology genetics and the concept of brain reserve through the mainstream topics of attention memory knowledge and language to a consideration of individual differences and of cognitive aging in a lifespan context This edition continues to feature the broad range of its predecessors while also providing critical assessments of current theories and findings **Life-Span Maintenance of Knowledge** Harry P. Bahrick,Lynda K. Hall,Melinda K. Baker,2013-06-07 This volume describes how well we maintain the knowledge we acquire throughout life Research traditionally focuses on memory for events that are retained over short time periods that can be accommodated in experiments This book by contrast uniquely describes the evolution of methods suitable

for investigating memory of complex knowledge acquired over several years and retained during the entire life span The methods substitute statistical for experimental controls and the investigations involve several hundred participants whose memory is tested up to 50 years after they acquired the knowledge in question The book covers educational content such as mathematics and foreign languages knowledge acquired incidentally such as the streets and buildings of the cities in which we live and knowledge acquired through the media Previously unpublished research on age related access to knowledge is included The analyses are based on the accessibility availability ratio a metric presented for the first time This metric allows comparisons of the portion of available knowledge that can be recalled as a function of age education and other individual differences and as a function of the domain of knowledge in question The ratio can be used to evaluate methods of instruction and methods of studying It can also be used to evaluate memory development and to diagnose memory pathology The volume will be of interest to researchers in human memory developmental psychologists gerontologists in academic and applied settings and educators

Student Teams That Get Results Gayle H. Gregory, Lin Kuzmich, 2010 Busy teachers struggle daily with the demands of increased accountability and the need to develop skill and proficiency in diverse groups of learners Focused on the power of student teams to advance learning this book shows how students working together and expressing ideas with one another can clarify their thinking and deepen their understanding of essential concepts Combining effective grouping strategies with other research based practices this resource for the differentiated classroom demonstrates how teachers can raise achievement and critical thinking by showing students how to practice three key skills attentive listening accepting others ideas and disagreeing with ideas rather than people Student Teams That Get Results shows teachers how to prepare students for deeper and more successful thinking on assessments using an innovative collection of best practice teaching tools that help learners Scaffold critical layers of meaning Generalize and infer Integrate content Identify patterns Increase adaptive and analytic reasoning This book offers more than 100 reproducible lesson planners assessment tools checklists graphic organizers and more Each teaching tool used as presented or customized to meet learners unique needs includes a reproducible template examples of the teaching tool in action across grade levels and content areas and a brief how to use it description

The Acquisition of Knowledge and Skills for Taskwork and Teamwork to Control Complex Technical Systems Annette Kluge, 2014-05-05

This book provides the first comprehensive literature review on the acquisition and retention of complex skills in High Reliability Organizations Based on this review it introduces a theoretical model of how skill and knowledge acquisition for complex tasks is accomplished and shows how this model can be used to derive training methods and instructional techniques Successful acquisition and retention of complex technical skills within High Reliability Organizations requires a full understanding of the learning process knowledge structure and skill requirements associated with the effective operation and management of technology For researchers and for organizations the understanding of these processes is vital for designing training programs as well as for reducing errors with severe consequences for human lives and the environment Until now only theoretical fragments exist on this topic and only a very limited number of publications actually address complex tasks in vocational occupational settings The Acquisition of Knowledge and Skills for Task Work and Teamwork to Control Complex Technical Systems uses its literature overview and theoretical model to formulate training principles that can be used to develop training experiments for further empirical investigations as well as training methods for applied organizational contexts
