The Dynamics of Disaster Susan W. Kieffer, 2013-10-14 If you are an amateur weather geek disaster wonk or budding student of earth sciences you will want to read this book Seattle Times In 2011 there were fourteen natural calamities that each destroyed over a billion dollars worth of property in the United States alone In 2012 Hurricane Sandy ravaged the East Coast and major earthquakes struck in Italy the Philippines Iran and Afghanistan In the first half of 2013 the awful drumbeat continued a monster supertornado struck Moore Oklahoma a powerful earthquake shook Sichuan China a cyclone ravaged Queensland Australia massive floods inundated Jakarta Indonesia and the largest wildfire ever engulfed a large part of Colorado Despite these events we still behave as if natural disasters are outliers Why else would we continue to build new communities near active volcanoes on tectonically active faults on flood plains and in areas routinely lashed by vicious storms A famous historian once observed that civilization exists by geologic consent subject to change without notice In the pages of this unique book leading geologist Susan W Kieffer provides a primer on most types of natural disasters earthquakes tsunamis volcanoes landslides hurricanes cyclones and tornadoes By taking us behind the scenes of the underlying geology that causes them she shows why natural disasters are more common than we realize and that their impact on us will increase as our growing population crowds us into ever more vulnerable areas Kieffer describes how natural disasters result from changes in state in a geologic system much as when water turns to steam By understanding what causes these changes of state we can begin to understand the dynamics of natural disasters In the book's concluding chapter Kieffer outlines how we might better prepare for and in some cases prevent future disasters She also calls for the creation of an organization something akin to the Centers for Disease Control and Prevention but focused on pending natural disasters *Nature-Based Flood Risk Management on Private Land* Thomas Hartmann, Lenka Slavíková, Simon McCarthy, 2019-08-22 This open access book addresses the various disciplinary aspects of nature based solutions in flood risk management on private land In recent decades water management has been moving towards nature based solutions These are assumed to be much more multi purpose than traditional grey infrastructures and seem to be regarded as a panacea for many environmental issues At the same time such measures require more and mostly privately owned land and more diverse stakeholder involvement than traditional grey engineering approaches They also present challenges related to different disciplines Nature based solutions for flood risk management not only require technical expertise but also call for interdisciplinary insights from land use planning economics property rights sociology landscape planning ecology hydrology agriculture and other disciplines to address the challenges of implementing them Ultimately nature based flood risk management is a multi disciplinary endeavor

Featuring numerous case studies of nature based flood risk management accompanied by commentaries this book presents brief academic reflections from two different disciplinary perspectives that critically highlight which specific aspects are of significance and as such underscore the multi disciplinary nature of the challenges faced Living in a Dynamic Tropical Forest Landscape Nigel Stork, Stephen M. Turton, 2009-01-26 This book brings together a wealth of scientific findings and ecological knowledge to survey what we have learned about the Wet Tropics rainforests of North Queensland Australia This interdisciplinary text is the first book to provide such a holistic view of any tropical forest environment including the social and economic dimensions The most thorough assessment of a tropical forest landscape to date Explores significant scientific breakthroughs in areas including conservation genetics vegetation modeling agroforestry and revegetation techniques biodiversity assessment and modeling impacts of climate change and the integration of science in natural resource management Research achieved in part due to the Cooperative Research Centre for Tropical Rainforest Ecology and Management the Rainforest CRC Written by a number of distinguished international experts contains chapter summaries and section commentaries Design for Regenerative Cities and Landscapes Rob Roggema, 2022-05-06 This book discusses the way to design and plan for regenerative cities and landscapes Where sustainability aims to safeguard the resources for future generations and the resilience concept focuses on dealing with shocks to keep the system functioning regeneration aims to give back more than it takes from the system This principle is often used in analytical and assessment literature but not yet elaborated in a spatial planning and design context which this book does It offers insights from a range of perspectives spatial scales such as the country level neighbourhood public space streets and the building levels scientific fields and continents amongst which Africa Oceania and Europe
