1. Introduction

In the past ten to fifteen years considerable progress has been made in the field of parallel text alignment. The term parallel text itself is now well-established within the computational linguistics community. It refers to texts accompanied by their translations in one or several languages. Aligned texts have proved to be an invaluable source of translation data for terminology banks and bilingual dictionaries. Translation alignment is currently providing the basis for the development of a new generation of tools to assist human translators and to improve the quality and productivity of their work.

The book "Parallel Text Processing: Alignment and Use of Translation Corpora" edited by Jean Véronis, aims at presenting an extensive overview of different research areas in the field of multilingual text alignment. It is the first of its kind to attempt a thorough evaluation and synthesis of recent advances in alignment technology on a large scale. It evolved from the ARCADE project carried out to contribute to the development of a methodology for the evaluation of existing alignment systems (Véronis and Langlais, 1999).

A remarkable example of collaboration of the thirty-four authors having been involved in major alignment research projects in recent years, the book is a collection of high-quality papers presented as individual chapters.

Guidelines for reading and an outline of the book structure are articulated in the preface by Martin Kay and the introductory chapter "From the Rosetta stone to the information society" by Jean Véronis (Chapter 1).

Kay points out that the experience of multilingual text alignment puts forward the lack of empirical knowledge of traditional translation. In this respect, different approaches to parallel text processing described in the book are likely to open new horizons for better understanding of the human translation process. Véronis gives a thorough analysis of ongoing evolution in parallel text processing. His paper aims at providing a survey of the state of the art in multilingual text alignment; it fully succeeds at its goals due to comprehensiveness and broad coverage of most important research issues of the field.

Parallel Text Processing Jean Véronis, 2000-09-30 With the rising importance of multilingualism in language industries brought about by global markets and world wide information exchange parallel corpora i.e corpora of texts accompanied by their translation have become key resources in the development of natural language processing tools The applications based upon parallel corpora are numerous and growing in number multilingual lexicography and terminology machine and human translation cross language information retrieval language learning etc The book's chapters have been commissioned from major figures in the field of parallel corpus building and exploitation with the aim of showing the state of the art in parallel text alignment and use ten to fifteen years after the first parallel text alignment techniques were developed Within the book the following broad themes are addressed i techniques for the alignment of parallel texts at various levels such as sentence clause and word ii the use of parallel texts in fields as diverse as translation lexicography and information retrieval iii available corpus resources and the evaluation of alignment methods The book will be of interest to researchers and advanced students of computational linguistics terminology lexicography and translation both in academia and industry

Translation-Driven Corpora Federico Zanettin, 2014-04-08 Electronic texts and text analysis tools have opened up a wealth of opportunities to higher education and language service providers but learning to use these resources continues to pose challenges to scholars and professionals alike Translation Driven Corpora aims to introduce readers to corpus tools and methods which may be used in translation research and practice Each chapter focuses on specific aspects of corpus creation and use An introduction to corpora and overview of applications of corpus linguistics methodologies to translation studies is followed by a discussion of corpus design and acquisition Different stages and tools involved in corpus compilation and use are outlined from corpus encoding and annotation to indexing and data retrieval and the various methods and techniques that allow end users to make sense of corpus data are described The volume also offers detailed guidelines for the construction and analysis of multilingual corpora Corpus creation and use are illustrated through practical examples and case studies with each chapter outlining a set of tasks aimed at guiding researchers students and translators to practice some of the methods and use some of the resources discussed These tasks are meant as hands on activities to be carried out using the materials and links available in accompanying downloadable resources Suggested further readings at the end of each chapter are complemented by an extensive bibliography at the end of the volume Translation Driven Corpora is designed for use by teachers and students in the classroom or by researchers and professionals for self learning It is an invaluable resource for anyone interested in this fast growing area of scholarly and professional activity
