Part Of The Deeper Sea:

Terminal evaluation of the areas beyond national jurisdiction (ABNJ) Deep-Sea project, part of the “Sustainable fisheries management and biodiversity conservation of deep-sea living marine resources and ecosystems in ABNJ” Food and Agriculture Organization of the United Nations, 2020-10-06 The marine areas beyond national jurisdiction ABNJ comprises 40 percent of the earth's surface it covers 64 percent of the surface of the ocean and 95 percent of its volume The Common Oceans ABNJ Program 2014-2019 was implemented by FAO as a concerted effort to bring various stakeholders to work together to manage and conserve the world's common oceans The ABNJ Deep Sea project one component of the Common Oceans ABNJ Program was of great assistance to newly formed regional fisheries management organization and arrangements RFMO As as well as some long standing regional fisheries The project showed positive results in safeguarding vulnerable marine ecosystems strengthening monitoring control and surveillance to combat illegal unreported and unregulated fishing mitigating bycatch mortality trends and building awareness of cross sectoral aspects in effective governance of ABNJ Through its cooperation with RFMOs the project has to some extent contributed to minimize the negative impacts of bycatch Results achieved should be capitalized on and upscaled in a second phase Particularly Sensitive Sea Areas Markus J. Kachel, 2008-04-30 Designations of large Particularly Sensitive Sea Areas PSSAs triggered a controversial debate within the International Maritime Organisation IMO concerning the legal basis of PSSAs the relationship between the IMO's PSSA guidelines and UNCLOS as well as the competency of IMO to adopt mandatory protective measures in these areas As a result IMO conducted a review process which led to substantially updated guidelines adopted in late 2005 This book provides a detailed analysis of the PSSA guidelines and protective measures available in PSSAs Emphasis is placed on their legal basis and the implications for coastal states jurisdiction over vessel source pollution

Economic value of ecosystem services from the deep seas and the areas beyond national jurisdiction Food and Agriculture Organization of the United Nations, Ottaviani, D., 2020-05-01 This circular stems from a study carried out for FAO projects Sustainable Fisheries Management and Biodiversity Conservation of Deep Sea Living Marine Resources and Ecosystems in the Areas Beyond National Jurisdiction GCP GLO 366 GFF and Deep Sea Sponge Grounds Ecosystems of the North Atlantic An Integrated Approach Towards their Preservation and Sustainable Exploitation GCP GLO 679 EC These projects included outputs related to the economic valuation of goods and services provided by the deep seas in areas beyond national jurisdiction This study compiled an estimate of the total economic value TEV of the deep seas which considered the provision of deep water fish the harvest of precious corals the use of substances of marine origin as pharmaceuticals the extraction of deep and ultra deep oil and the potential mining of mineral resources from the seafloor carbon sequestration carried out by the deep seas the importance of scientific research in the deep seas and touristic activities with submersibles to visit sites such as the Titanic shipwreck Comprehensively the TEV assessed for the deep sea ecosystem as a whole is

estimated at USD 267 billion per year Ninety two percent of the economic value originates from abiotic resources oil and minerals 5 percent from biotic resources fish corals and pharmaceuticals of marine origin 2 percent from cultural services scientific research and tourism recreation and 1 percent from carbon sequestration

Cunha,Annemiek Vink,Lenaick Menot,Miguel Caetano,Matthias Haeckel,2025-09-24 After more than 20 years mining of mineral resources such as polymetallic nodules and massive sulfides in the deep sea is back on the agenda of many countries and companies in their quest for metals for the energy transition and high tech products In this course the past 10 years have seen an immense increase of exploration licenses issued by the International Seabed Authority ISA which administers and controls activities at the ocean floor beyond national jurisdiction generally termed the Area The seven pilot investors have renewed their exploration licenses in the Clarion Clipperton Zone CCZ for another five year term after which they will need to apply for an exploitation license or return their contracted claim

Thus ISA is currently developing the regulatory framework for the exploitation of seafloor mineral resources which includes amongst several other issues legislation to ensure effective protection of the marine environment from harmful effects according to UNCLOS article 145 In order to support decision making for ISA s regulations the European project MiningImpact funded through the Joint Programming Initiative Healthy and Productive Seas and Oceans JPIO has carried out extensive environmental research in the eastern exploration license areas for polymetallic nodules in the CCZ At the heart of the project were two research cruises which established the environmental baselines in the German and Belgian license areas of the CCZ and independently monitored the first test of an industrial prototype nodule collector vehicle conducted by the Belgian company DEME GSR The monitoring program focused on studying the direct impacts in the trial areas and the dispersal and redeposition of the suspended sediment plume Topics covered during the monitoring included habitat characterization natural variability disturbance effects temporal evolution faunal communities and the development of techniques for rapid biodiversity assessment The MiningImpact project also initiated a restoration experiment with artificial hard substrates which aims at exploring the possibility to enable and accelerate the recolonization of areas affected by mining

Submarine Canyons: Human Connections to the Deep Sea Awantha Dissanayake,Veerle Ann Ida Huvenne,Jaime Selina Davies,Kostas

Kiriakoulakis,2023-11-27 Submarine canyons are some of the most prominent features of the world s continental margins creating heterogeneity in the terrain influencing local and global hydrodynamics and often creating hotspots of biodiversity both on the seafloor and in the water column Canyon morphology and location on the margin make them the main conduits between the shelf and the deep sea focussing the transport of sediments organic matter nutrients and increasingly pollutants and litter The focus of this Research Topic is highlighting human connections to the deep sea Previous studies have underlined the need for a better understanding of anthropogenic impacts on submarine canyons and how they fast track our human footprint to the deep sea Besides a better assessment of the extent and nature of human activities in submarine canyons it primarily requires a holistic understanding of submarine canyons as systems governed by the interplay of geological sedimentological oceanographic and biological processes The goal of this Research Topic based on the recent INCISE2021 International Symposium on Submarine Canyons aims to fill that gap by gathering the latest observations of human activities in submarine canyons the latest insights in submarine canyon functioning and the latest interpretations on how the two are influencing each other

Methods for the Study of Deep-Sea Sediments, Their Functioning and Biodiversity Roberto Danovaro,2009-12-21 For years scientists viewed the deep sea as calm quiet and undisturbed with marine species existing in an ecologically stable and uniform environment Recent discoveries have completely transformed that understanding and the deep sea is recognized as a complicated and dynamic environment with a rich diversity of marine species Carefully designe Deep-Sea Observation Equipment and Exploration Technology Shaowei Zhang,JongJin Park,Zhiquan Daniel Deng,2023-10-26 *Deep Sea Drilling Project* National Science Foundation (U.S.),1974 Vulnerable Marine Ecosystems and Deep-Sea Fisheries Les Watling,Jeroen Ingels,Sandra Brooke,Christopher Kim Pham,Kerry Howell,2022-01-25 **Materials Performance and the Deep Sea** ,1969

advances in deep sea exploration technology oceanographic data availability modeling resolution and a better understanding of larval biology and dispersal are fostering more interdisciplinary partnerships between physicists and biologists to model ecosystem connectivity These connectivity analyses can now be ground truthed by population genetic approaches built on datasets developed from next generation sequencing technologies e g RADseq RADTag 2bRAD fostering new understanding of marine ecosystem connectivity Recent and Emerging Innovations in Deep-Sea Taxonomy to Enhance Biodiversity Assessment and Conservation Stefanie Kaiser, Magdalena Błażewicz, Kevin M.
