Contemporary Perspectives in Philosophy and Methodology of Science Wenceslao J. González, 2006 Nowadays philosophy and methodology of science appear as a combination of novelty and continuity This blend is clear both in the general approaches to science those thought of as any science and in the

specific perspectives on every science either formal or empirical There are new topics for philosophical reflection such as key issues in philosophy of medicine and central problems raised by neuroscience Thus new contents have brought attention to aspects that previously went almost unnoticed In addition there are new angles for philosophical study such as the repercussion of society on scientific activity in aims processes and results But the background of the main philosophical and methodological trends of the twentieth century is in many ways still in place *An Introduction to Metaphilosophy* Søren Overgaard, Paul Gilbert, Stephen Burwood, 2013-03-07 What is philosophy How should we do it Why should we bother to These are the kinds of questions addressed by metaphilosophy the philosophical study of the nature of philosophy itself Students of philosophy today are faced with a confusing and daunting array of philosophical methods approaches and styles and also deep divisions such as the notorious rift between analytic and Continental philosophy This book takes readers through a full range of approaches analytic versus Continental scientific versus humanistic pure versus applied enabling them to locate and understand these different ways of doing philosophy Clearly and accessibly written it will stimulate reflection on philosophical practice and will be invaluable for students of philosophy and other philosophically inclined readers **Scientific Realism and the Rationality of Science** Howard Sankey, 2016-04-01 Scientific realism is the position that the aim of science is to advance on truth and increase knowledge about observable and unobservable aspects of the mind independent world which we inhabit This book articulates and defends that position In presenting a clear formulation and addressing the major arguments for scientific realism Sankey appeals to philosophers beyond the community of typically Anglo American analytic philosophers of science to appreciate and understand the doctrine The book emphasizes the epistemological aspects of scientific realism and contains an original solution to the problem of induction that rests on an appeal to the principle of uniformity of nature **A Theory of Philosophical Fallacies** Leonard Nelson, 2015-08-07 Presented as a Vorlesung in the German philosophical tradition this book presents the most detailed account of Nelson's method of argument analysis celebrated by many luminaries such as Karl Popper It was written in 1921 in opposition to the relativistic subjectivistic and nihilistic tendencies of Nelson's time The book contains an exposition of a method that is a further development of Kant's transcendental dialectics followed by an application to the critical analysis of arguments by many famous thinkers including Bentham Mill Poincaré Leibniz Hegel Einstein Bergson Rickert Simmel Brentano Stammler Jellinek Dingler and Meinong The book presents a general theory of philosophical argumentation as seen from the viewpoint of the typical fallacies committed by anybody arguing philosophically whether professional philosophers or philosophical laypeople Although the nature of philosophy and philosophical argumentation is one of the most recurrent objects of reflection for philosophers this book represents the first attempt at a general theory of philosophical fallacy According to Nelson it is in the shape of false dilemmas that errors in reasoning always emerge and false dilemmas are always the result of the same mechanism the unwitting replacement of one concept for another *A Theory of Literary Explication* Kenneth

B. Newell, 2011-07-12 This book presents current multidisciplinary research and theory from 17 different fields most of them never before applied to literary explication in order to provide 1 justification for the practice of a relative probability type of explication as distinguished from interpretation 2 a relativistic foundation for the preference of some explications of a literary work over others and thereby 3 a middle way between the postmodern pluralist view that a work has only an unlimited number of equally acceptable though different explications and the modern intentionalist view that it has only one acceptable explication the author's Nine of the 17 fields are of primary relevance critical theory hermeneutics probability theory philosophy of science second order logic and four fields of cognitive science linguistics epistemology neuropsychology and artificial intelligence But the book also touches upon textual criticism legal theory measure theory fuzzy logic animal learning behavior developmental psychology evolutionary epistemology and neurobiology The book shows that those using a relative probability type of explication on a literary work can achieve consensus because the healthy adult human brain has an evolved uniform and probably innate ability to form relative probability judgments and to form them in the practice of activities like reading and explicating that are not uniform and innate Lastly the book contributes to the scholarly areas of explication theory and practice first by providing a relativistic foundation for a craft explication that currently is not acknowledged to have any foundation but nonetheless continues and will continue to be practiced and second by presenting a means relative epistemic probability by which judging some explications of a literary work to be more acceptable than others may be justified philosophically an uncommon circumstance in this postmodern era in which philosophical justification of many beliefs and practices is thought to be untenable

Argumentation in Actual Practice Frans H. van Eemeren, Bart Garssen, 2019-09-23 Argumentation in Actual Practice contains a collection of topical studies about argumentative discourse in context written by argumentation scholars from a diversity of academic backgrounds Some contributions provide general perspectives other contributions deal with specific issues particular types of argumentative discourse or individual argumentative speech events The contexts in which argumentation is examined vary from politics and the media to medical juridical educational commercial or military contexts a specific academic discipline a special issue or pertain to all kinds of contextualised argumentative discourse The issues discussed include the interpretation and analysis of argumentation strategic manoeuvring argument schemes the stock issues the fallacies the principle of charity and the persuasiveness of argumentative discourse A common feature is that they are all empirically oriented and that virtually all of them are strongly concerned with an adequate understanding of contextualised argumentative discourse and the factors that may increase or decrease its reasonableness and effectiveness

Philosophy and Neuroscience Steven S. Gouveia, 2022-04-11 This book explores the methodological strategies for linking philosophy and neuroscience concerning the study of the conscious brain The author focuses on four distinct methods for relating these two academic disciplines isolationist reductionist neurophenomenological and non reductionist After analyzing the pros and cons of these approaches Steven S Gouveia applies them to the concept of Qualia and Information to understand how the metaphilosophical assumptions of each approach influence the definitions of those specific concepts Gouveia argues for an approach that conceives the interdisciplinarity of both philosophy and neuroscience in a particular and sound methodology offering empirical examples of the explanatory power of this methodology over the others Additionally he shows how the metaphilosophical assumptions of each methodology usually taken by researchers implicitly and unconsciously influence their own approach to the methodological problem

How Philosophers Argue Fernando Leal, Hubert Marraud, 2022-02-21 This volume presents a double argumentative analysis of the debate between Bertrand Russell and Frederick Copleston on the existence of God It includes an introduction justifying the choice of text and describing the historical and philosophical background of the debate It also provides a transcript of the debate based in part on the original recording The argumentative analyses occupy Parts I and II of the book In Part I the argumentative process is analysed by means of the ideal model of critical discussion the workhorse of pragma dialectics Part I shows how the two parties go through the four stages of a critical discussion It highlights the questions raised over and beyond the presiding question of whether God exists and examines almost a hundred questions that are raised Many are left in the air whereas a few others give rise to sundry sub discussions or meta dialogues In Part II the theoretical framework of argument dialectic is put to work argument structures are identified by means of punctuation marks argumentative connectors and operators allowing to see the argumentative exchange as the collaborative construction of a macro argument Such a macro argument is both a joint product of the arguers and a complex structure representing the dialectical relationships between the individual arguments combined in it Finally the complementarity of the two approaches is addressed Thus the book can be described as an exercise in adversarial collaboration
