Photoproduction of Pions on Nucleons and Nuclei A. A. Komar, 1989 Studies the theoretical and experimental aspects of photoproduction of pions on nucleons and nuclei in the range of photon energies up to 1 GeV Theoretical predictions are presented based on dispersion relationships of multiple pion photoproduction amplitudes The problem of a complete experiment i

Photomesic and Photonuclear Reactions and Investigation Methods with Synchrotrons D. V. Skobel'tsyn, 2013-11-09 This collection of articles contains a systematic outline of original experimental and theoretical research on photoproduction of neutral pions at protons and at a strongly bound system of a few nucleons i.e. the helium nucleus Spark chambers and their use as spectrometers for photons and electrons are described in detail The articles of the collection include information on a novel method of determining the efficiency of recording apparatus by generating monochromatic photons The articles describe original theoretical research on the optical anisotropy of nuclei Problems encountered in experimental studies of operating the synchrotron as a storage type accelerator of electrons and positrons receive particular attention The results of this research work are listed and the problems of oppositely directed electron positron beams in the 250 MeV synchrotron are considered The articles should be of interest to physicists including research workers teachers engineers graduate students and students in advanced undergraduate courses v
