Beyond the Century of the Child Willem Koops, Michael Zuckerman, 2012-10-30 In 1900 Ellen Key wrote the international bestseller The Century of the Child In this enormously influential book she proposed that the world's children should be the central work of society during the twentieth century Although she never thought that her century of the child would become a reality in fact it had much more resonance than she could have imagined The idea of the child as a product of a protective and coddling society has given rise to major theories and arguments since Key's time For the past half century

the study of the child has been dominated by two towering figures the psychologist Jean Piaget and the historian Philippe Ariès. Interest in the subject has been driven in large measure by Ariès's argument that adults failed even to have a concept of childhood before the thirteenth century and that from the thirteenth century to the seventeenth there was an increasing childishness in the representations of children and an increasing separation between the adult world and that of the child. Piaget proposed that children's logic and modes of thinking are entirely different from those of adults. In the twentieth century this distance between the spheres of children and adults made possible the distinctive study of child development and also specific legislation to protect children from exploitation, abuse and neglect. Recent students of childhood have challenged the ideas those titans promoted; they ask whether the distancing process has gone too far and has begun to reverse itself. In a series of essays *Beyond the Century of the Child* considers the history of childhood from the Middle Ages to modern times from America and Europe to China and Japan, bringing together leading psychologists and historians to question whether we unnecessarily infantilized children and unwittingly created a detrimental wall between the worlds of children and adults. Together these scholars address the question whether a hundred years after Ellen Key wrote her international sensation the century of the child has in fact come to an end. *Logical Learning Theory* Joseph F. Rychlak, 1994-01-01. In 1989 B. F. Skinner told Joseph Rychlak that the greatest disappointment resulting from the cognitive revolution was the turning of the human organism into a machine. Intrigued by this statement Rychlak decided that after many years of formulation it was time to present his fundamentally teleological view of the human being which he calls the logical learning theory (LLT). In this new theoretical perspective the author re-presents such concepts as intention, purpose and free will. Significant aspects of the mind-body issue are explored here. Rychlak addresses teleological issues and provides a language for proper conceptualization. He uses experimental findings to support the notion of behavior as self-directed rather than mechanistic. In the process Rychlak places LLT on the side of teleological explanation in which concepts like free will, self-choice, purpose and intention are no longer dismissed. Rychlak compares LLT and existing formulations of behavior including classical and operant conditioning, social learning theory, social constructionism, cognitive science, gestalt theories and personality theories. Extensive research data and thorough discussions support Rychlak's theory. A glossary is also included.
