Beal, Hannah M. Dostal, Susan R Easterbrooks, 2024-05-10 Most students who are deaf or hard of hearing DHH struggle with acquiring literacy skills some as a direct result of their hearing loss some because they are receiving insufficient modifications to access the general education curriculum and some because they have additional learning challenges necessitating significant program modifications This second edition of Literacy Instruction for Students who are Deaf and Hard of Hearing updates previous findings and describes current evidence based practices in teaching literacy to DHH learners Beal Dostal and Easterbrooks provide educators and parents with a process for determining which literacy and language assessments are appropriate for individual DHH learners and whether an instructional practice is supported by evidence or causal factors They describe the literacy process with an overview of related learning theories language and literacy assessments and evidence based instructional strategies across the National Reading Panel s five areas of literacy instruction phonemic awareness phonics vocabulary fluency and comprehension The volume includes evidence based writing strategies and case vignettes that highlight application of assessments and instructional strategies within each of these literacy areas Crucially it reviews the remaining challenges related to literacy instruction for DHH learners Educators and parents who provide literacy instruction to DHH learners will benefit from the breadth and depth of literacy content provided in this concise literacy textbook *Literacy and Deafness* Peter V. Paul, 1998 The development of literacy reading and writing skills is important for success in school and mainstream society Some might argue however that literacy skills are not necessary for the development of literate thought the ability to think critically and reflectively This book provides some insights into the relationship between literacy and literate thought In the first few chapters readers are introduced to major perspectives on literacy the role of teaching deafness research on both hearing and deaf students and

the development of writing on these students It continues with an overview of the major tenets of the literary critical perspective an overview of the theory and research and teaching literacy to ESL students The book winds down with reform assessment and the argument that educators need to consider alternative measures of achievement All educators but especially those with hearing impaired students deaf interpreters and speech pathologists

Literacy Instruction for Students who are Deaf and Hard of Hearing Susan R. Easterbrooks PhD, Jennifer Beal-Alvarez MA, 2013-02-14 Most students who are deaf or hard of hearing DHH struggle with acquiring literacy skills some as a direct result of their hearing loss some because they are receiving insufficient modifications to access the general education curriculum and some because they have additional learning challenges necessitating significant program modifications Additionally instructional practices for DHH students tend to be directed toward two sub populations of DHH students those with useable access to sound and those without

Early Literacy Development in Deaf Children Connie Mayer, Beverly J. Trezek, 2015-05-29 There is a robust body of knowledge suggesting that early language and literacy experiences significantly impact on future academic achievement In contrast relatively little has been written with respect to the early literacy development and experiences of deaf children In *Early Literacy Development in Deaf Children* Connie Mayer and Beverly J Trezek seek to fill this gap by providing an in depth exploration of how young deaf children learn to read and write identifying the foundational knowledge abilities and skills that are fundamental to this process They provide an overview of the latest research and present a model of early literacy development to guide their discussion on topics such as teaching reading and writing curriculum and interventions bilingualism and assessment Throughout they concentrate on the ways in which young learners with hearing loss are similar to or different from their hearing age peers and the consequent implications for research and practice Their discussion is wide reaching as they focus on children from various cultural and linguistic backgrounds those with additional disabilities and hearing losses ranging from mild to profound and those using a range of communication modalities and amplification technologies including cochlear implants With the implementation of Universal Newborn Hearing Screening

and advancements in hearing technologies that have heightened both the emphasis on literacy development in the early years and the importance of these years in the ultimate development of age appropriate reading and reading outcomes this timely text addresses a topic that has thus far eluded the field **Deafness, Development and Literacy** Alec

Webster, 2017-11-28 Originally published in 1986 Deafness is not just a deprivation of sound but a barrier to normal social interaction and learning There are likely to be children with some degree of hearing loss in every primary classroom so it is important that teachers know how to help them This book gives a clear summary of the main causes of hearing loss mild or severe its identification diagnosis and treatment followed by an explanation of the impact it can have on a child's social and linguistic development Considering normal development of literacy the book then is concerned with the hearing impaired child's strategies for reading spelling and writing It explores how teachers can give the most effective help what the impact of a teaching programme is likely to be and how to evaluate what the child has learnt Specialist teachers of the deaf advisers and psychologists as well as class teachers and students of education will find this book very helpful **Deaf Students Can**
