Flagellates in Freshwater Ecosystems R.I. Jones,V. Ilmavirta,2012-12-06 It is not so very long ago that botanical consensus abandoned the distinction that was drawn between Algae and Flagellata the latter having been regarded by zoologists as a group of the Protozoa Even today some colourless flagellates may find themselves occupying different locations in contrasting taxonomic schemes However modern developments in ecology have placed greater emphasis on functional attributes of organisms and hydro biologists have certainly been in the forefront of such changes Thus we find that flagellates are again the subject of controversy not so much over their taxonomic position as over their functional position their role in aquatic ecosystems At the 22nd Congress of the International Association of Theoretical and Applied Limnology in Lyon France in August 1983 we conceived the idea of a meeting to discuss Flagellates in Freshwater Ecosystems This idea was approved by the committee of SIL and we arranged for the meeting to take place during June 1986 at Lammi Biological Station University of Helsinki in Finland Participants from nine countries enjoyed outstanding hospitality from the staff at the Station during a week of lectures excursions and discussion sessions On behalf of the participants we express our thanks for the generous sponsorship received from the Maj and Tor Nessling Foundation the Academy of Finland the Finnish Ministry of Education Lammi Biological Station and the Finnish Limnological Society **Gene-Environment Interplay** ,2012-12-31

McLachlan,T. Erasmus,2013-04-17

What sight is more beautiful than a high energy beach facing lines of rolling white breakers What battleground is more ferocious than where waves and sand meet What environment could be more exciting to study than this sandy interface between sea and land And yet how much do we know about sandy beaches Open sandy beaches are amongst the most neglected fields of scientific study in the coastal environment This situation exists despite their great extent along most temperate and tropical coastlines and their value as recreational areas and buffer zones against the sea The traditional oceanographer does not venture into the surf zone while the terrestrial ecologist stops short at the high water mark Only a few coastal engineers have grappled with the problem of sand and sediment movement as it influences their construction of harbours and pipelines The marine biologist on the other hand has regarded estuaries coral reefs and rocky shores obviously teeming with life as more fruitful areas for study than the apparently poor animal life on sandy beaches Sandy beaches have therefore tended to become a scientific no man s land Over the last decade this situation has begun to improve Recent work on high energy beaches has revealed that they may in fact be rich and productive and fertile areas for study It has even been suggested that beaches and their adjacent surf zones may constitute viable marine ecosystems Nonlinear Universe:

It examines basic psychoacoustics from a more cognitive and ecological perspective It provides broad coverage including both basic and applied research in auditory perception and coherence and cross referencing among chapters

Foundations of Space Biology and Medicine: bk.1-2. Ecological and physiological bases of space biology and medicine ,1975 **Day vs Night** Nora Franklin, AI, 2025-01-09 Day vs Night presents a fascinating exploration of how Earth's 24 hour cycle fundamentally shapes life on our planet from the cellular level to entire ecosystems The book masterfully weaves together three core themes physiological adaptations to light and dark cycles ecological interactions that vary between day and night and the environmental factors influencing temporal activity patterns Through clear accessible language it reveals how circadian rhythms serve as a crucial organizing principle in nature affecting everything from cellular processes to species survival The progression from molecular to ecosystem wide patterns provides readers with a comprehensive understanding of temporal ecology Beginning with cellular responses to light and dark the book moves through fascinating examples of behavioral adaptations such as nocturnal hunting strategies and diurnal foraging patterns before culminating in a broader examination of how these temporal variations create complex ecological networks Modern research methods including satellite tracking and infrared photography bring these concepts to life with current scientific insights What sets this book apart is its systems thinking approach connecting biology with climate science evolutionary psychology and conservation biology While maintaining scientific rigor it remains accessible to both students and general readers using concrete examples and real world applications to illuminate complex concepts The work is particularly timely as it addresses how human activities including urbanization and artificial lighting are impacting natural temporal patterns making it relevant for anyone interested in environmental science and conservation Sustainable Production System Clément Morlat, 2020-04-09 Wealth is no longer just an ability to live well in a world shaped by human activities It is also an ability to push back or defer the limits of a world in biological and climatic closure This book examines the theoretical conflicts and the power plays which often oppose the socio political and technical financial practices of recognition of what intervenes in the production of this wealth i e of what has value It lays down the principles of a contributory modeling method allowing debates around the concept of development the building of scenarios the negotiation of their implementation and a cross sectoral reading of their social ecological and economic costs This method called Dynamic Modeling of Cost Systems is based on a territorial communication device which articulates political contractual and accounting innovations using deliberative and normative digital tools It combines different local representations of value in order to approach wealth through an integrated analysis of micro meso and macro issues
