Long Term Performance Of Permeable Reactive Barriers:

Long-Term Performance of Permeable Reactive Barriers K.E. Roehl,T. Meggyes,F.G. Simon,D.I. Stewart,2005-04-27

While extensive research has been performed on many technological aspects of permeable reactive barriers and a number of contaminants have so far been successfully treated by PRB systems long term performance has not been extensively considered and little is known about the processes influencing long term behaviour This gap in our knowledge is all the more disadvantageous as design life has a decisive influence on the economic viability of PRBs The book describes methods for evaluation and enhancement of the long term performance of PRB systems especially of those targeting heavy metals specifically uranium and organic contaminants by sorption and or precipitation mechanisms Major topics in the book are Selection and characterisation of suitable reactive materials Characterisation of the relevant contaminant attenuation processes Developing new contaminant binding chemical compounds ligands Accelerated testing methods to assess the long term performance of the attenuation mechanisms in PRBs Evaluation of the influence of site characteristics on PRB performance Monitoring of existing and new field installations Coupling of electrokinetic techniques and PRB systems Large scale laboratory and field tests and their results It addresses the long term performance of PRBs an important feature of this novel remediation technology systematically It deals extensively with heavy metal removal with special emphasis on uranium A number of case studies experiences with large scale modelling and test site experiments provide insight into the practical application of the results This volume will contribute to the science underpinning groundwater remediation and this will result in the improvement of quality of life and health and safety A systematic approach to investigating the long term performance of permeable reactive barriers Development of new contaminant binding chemical compounds ligands accelerated testing methods to assess the long term performance and efficiency enhancing electrokinetic techniques Extensive data and information on a Hungarian uranium mining facility once a carefully kept secret of the Soviet Union

Permeable Reactive Barriers Genevieve A. Boshoff,Genevieve Boshoff,Brian D. Bone,2005 *Fouling and the Long-term Performance of Permeable Reactive Barriers* Lin Li,2004 Permeable Reactive Barrier Ravi Naidu,Volker Birke,2018-10-08 Remediation of groundwater is complex and often challenging But the cost of pump and treat technology coupled with the dismal results achieved has paved the way for newer better technologies to be developed Among these techniques is permeable reactive barrier PRB technology which allows groundwater to pass through a buried porous barrier that either captures the contaminants or breaks them down And although this approach is gaining popularity there are few references available on the subject Until now Permeable Reactive Barrier Sustainable Groundwater Remediation brings together the information required to plan design model and apply a successful cost effective and sustainable PRB technology With contributions from pioneers in this area the book covers state of the art information on PRB technology It details design criteria predictive modeling and application to contaminants beyond petroleum hydrocarbons including inorganics and

radionuclides The text also examines implementation stages such as the initial feasibility assessment laboratory treatability studies including column studies estimation of PRB design parameters and development of a long term monitoring network for the performance evaluation of the barrier It also outlines the predictive tools required for life cycle analysis and cost performance assessment A review of current PRB technology and its applications this book includes case studies that exemplify the concepts discussed It helps you determine when to recommend PRB what information is needed from the site investigation to design it and what regulatory validation is required
