Design Examples for High Strength Steel Reinforced Concrete Columns Sing-Ping Chiew,Yanqing Cai,2018-04-17 This book is the companion volume to Design of High Strength Steel Reinforced Concrete Columns A Eurocode 4 Approach This book provides a large number of worked examples for the design of high strength steel reinforced concrete SRC columns It is based on the Eurocode 4 approach but goes beyond this to give much needed guidance on the narrower range of permitted concrete and steel material strengths in comparison to EC2 and EC3 and the better ductility and buckling resistance of SRC columns compared to steel or reinforced concrete Special considerations are given to resistance calculations that maximize the full strength of the materials with concrete cylinder strength up to 90 N mm² yield strength of structural steel up to 690 N mm² and yield strength of reinforcing steel up to 600 N mm² respectively These examples build on the design principles set out in the companion volume allowing the readers to practice and understand the EC4 methodology easily Structural engineers and designers who are familiar with basic EC4 design should find these design examples particularly helpful whilst engineering undergraduate and graduate students who are studying composite steel concrete design and construction should easily gain further understanding from working through the worked examples which are set out in a step by step clearly fashion

Design Examples for High Strength Steel Reinforced Concrete Columns Sing-Ping Chiew,Yanqing Cai,2018-04-17 This book is the companion volume to Design of High Strength Steel Reinforced Concrete Columns A Eurocode 4 Approach This book provides a large number of worked examples for the design of high strength steel reinforced concrete SRC columns It is based on the Eurocode 4 approach but goes beyond this to give much needed guidance on the narrower range of permitted concrete and steel material strengths in comparison to EC2 and EC3

and the better ductility and buckling resistance of SRC columns compared to steel or reinforced concrete. Special considerations are given to resistance calculations that maximize the full strength of the materials with concrete cylinder strength up to 90 N/mm², yield strength of structural steel up to 690 N/mm² and yield strength of reinforcing steel up to 600 N/mm² respectively. These examples build on the design principles set out in the companion volume allowing the readers to practice and understand the EC4 methodology easily. Structural engineers and designers who are familiar with basic EC4 design should find these design examples particularly helpful whilst engineering undergraduate and graduate students who are studying composite steel concrete design and construction should easily gain further understanding from working through the worked examples which are set out in a step by step clearly fashion.

Reinforced Concrete Design Chu-Kia Wang, José Antonio Pincheira, Charles G. Salmon, Gustavo J. Parra-Montesinos, 2021-12-07. The ninth edition of this book will be updated to incorporate the changes in the design provisions of the 2019 American Concrete Institute ACI Building Code and Commentary ACI 318-19. As in previous editions, considerable emphasis is placed on presenting to the student as well as the practicing engineer the basic principles of analysis and design of reinforced concrete structures. Each chapter is organized such that the principles of mechanics are presented first to provide a detailed understanding of the theory and observed behavior of reinforced concrete members. This material is then used to describe and to provide the rationale for the design provisions of the ACI Building Code. Numerous examples are presented in each chapter to illustrate the concepts as well as the general approach to design and analysis. The reader may either study in detail the concepts in logical sequence or merely accept a qualitative explanation and proceed directly to the design process. All example problems will be revised and as appropriate new examples will be developed to illustrate the use of available software and design tools currently used in practice.
