 Seattle **Weather A Concise Introduction** is an accessible and beautifully illustrated text covering the foundations of
 meteorology in a concise clear and engaging manner Designed to provide students with a strong foundation in the physical
 dynamical and chemical processes taking place in the atmosphere this introductory textbook will appeal to students with a
 wide range of mathematical and scientific backgrounds This textbook features a single case study of a mid latitude cyclone
 which is referred to throughout the whole book to illustrate the basic principles driving atmospheric dynamics and
 phenomena boxes on more advanced topics appendices for additional coverage chapter summaries listing the take home
 points discussed and colour figures and charts illustrating the fundamental concepts Key terms are evident throughout and a
 glossary explains the terms that students will need to understand and become familiar with **Microwave Remote
 Sensing for Oceanographic and Marine Weather-Forecast Models** Robin A. Vaughan, 2012-12-06 The power of
 microwave remote sensing for studying the oceans of the world was demonstrated conclusively by the SEASAT mission in
 1978 Since then no further satellite flown instruments have been available to provide further data of this type However the
 proposed launch of ESA's ERS 1 satellite will lead to a new set of active microwave instruments being flown in space in 1990
 Even though similar data has been obtained from aircraft flown instruments SAR scatterometers altimeters etc a great deal
 of activity has been taking place to develop the necessary expertise in handling and analysing such data when it comes on
 stream from ERS 1 and from subsequent satellites It was against this background that the scientific Affairs Division of NATO
 again agreed to sponsor an ASI in Dundee in 1988 Its purpose was to review existing knowledge of the extraction of marine
 and atmospheric geophysical parameters from satellite gathered microwave data and to enable scientists to prepare
 themselves and their computing systems to utilise the new data when it becomes available The importance of the data is
 largely as input parameters to assist in the fitting of boundary conditions in large computer models The course was
 concerned more with the non imaging instruments that is with passive radiometers altimeters and scatterometers than with
 the imaging synthetic aperture radar
