Quantum Topology Louis H. Kauffman, Randy A. Baadhio, 1993 This book constitutes a review volume on the relatively new subject of Quantum Topology Quantum Topology has its inception in the 1984-1985 discoveries of new invariants of knots and links Jones Homfly and Kauffman polynomials These invariants were rapidly connected with quantum groups and methods in statistical mechanics This was followed by Edward Witten's introduction of methods of quantum field theory into the subject and the formulation by Witten and Michael Atiyah of the concept of topological quantum field theories This book is a review volume of on going research activity The papers derive from talks given at the Special Session on Knot and Topological Quantum Field Theory of the American Mathematical Society held at Dayton Ohio in the fall of 1992 The book consists of a self contained article by Kauffman entitled Introduction to Quantum Topology and eighteen research articles by participants in the special session This book should provide a useful source of ideas and results for anyone interested in the interface between topology and

Guest, Reiko Miyaoka, Yoshihiro Ohnita, 2002 Ideas and techniques from the theory of integrable systems are playing an increasingly important role in geometry Thanks to the development of tools from Lie theory algebraic geometry symplectic geometry and topology classical problems are investigated more systematically New problems are also arising in mathematical physics A major international conference was held at the University of Tokyo in July 2000 It brought together scientists in all of the areas influenced by integrable systems This book is the second of three collections of expository and research articles This volume focuses on topology and physics The role of zero curvature equations outside of the traditional context of differential geometry has been recognized relatively recently but it has been an extraordinarily productive one and most of the articles in this volume make some reference to it Symplectic geometry Floer homology twistor theory quantum cohomology and the structure of special equations of mathematical physics such as the Toda field equations all of these areas have gained from the integrable systems point of view and contributed to it Many of the articles in this volume are written by prominent researchers and will serve as introductions to the topics It is intended for graduate students and researchers interested in integrable systems and their relations to differential geometry topology algebraic geometry and physics The first volume from this conference also available from the AMS is *Differential Geometry and Integrable Systems* Volume 308 CONM 308 in the Contemporary Mathematics series The forthcoming third volume will be published by the Mathematical Society of Japan and will be available outside of Japan from the AMS in the Advanced Studies in Pure Mathematics series

Functional Calculus of Pseudodifferential Boundary Problems Gerd Grubb, 2012-12-06 Pseudodifferential methods are central to the study of partial differential equations because they permit an algebraization A replacement of compositions of operators in n space by simpler product rules for their symbols The main purpose of this book is to set up an operational calculus for operators defined from differential and pseudodifferential boundary value problems via a resolvent construction A secondary purpose is to give a complete treatment of the properties of the calculus of pseudodifferential boundary problems with transmission both the first version by Boutet de Monvel brought completely up to date in this edition and in version containing a parameter running in an unbounded set And finally the book presents some applications to evolution problems index theory fractional powers spectral theory and singular perturbation theory In this second edition the author has extended the scope and applicability of the calculus with original contributions and perspectives developed in the years since the first edition A main improvement is the inclusion of globally estimated symbols allowing a treatment of operators on noncompact manifolds Many proofs have been replaced by new and simpler arguments giving better results and clearer insights The applications to specific problems have been adapted to use these improved and more concrete techniques Interest continues to increase among geometers and operator theory specialists in the Boutet de Monvel calculus and its various generalizations Thus the book's improved proofs and modern points of view will be useful to research mathematicians and to graduate students studying partial differential equations and pseudodifferential operators

Functional Analysis on the Eve of the 21st Century Simon Gindikin, James Lepowsky, Robert Wilson, 2012-12-06 A four day conference Functional Analysis on the Eve of the Twenty First Century was held at Rutgers University New Brunswick New Jersey from October 24 to 27 1993 in honor of the eightieth birthday of Professor Israel Moiseyevich Gelfand He was born in Krasnye Okna near Odessa on September 2 1913 Israel Gelfand has played a crucial role in the development of functional analysis during the last half century His work

and his philosophy have in fact helped to shape our understanding of the term functional analysis itself as has the celebrated journal *Functional Analysis and Its Applications* which he edited for many years Functional analysis appeared at the beginning of the century in the classic papers of Hilbert on integral operators Its crucial aspect was the geometric interpretation of families of functions as infinite dimensional spaces and of operators particularly differential and integral operators as infinite dimensional analogues of matrices directly leading to the geometrization of spectral theory This view of functional analysis as infinite dimensional geometry organically included many facets of nineteenth century classical analysis such as power series Fourier series and integrals and other integral transforms

Ratiu, 2007-07-03 The invited papers in this volume are written in honor of Alan Weinstein one of the world's foremost geometers Contributions cover a broad range of topics in symplectic and differential geometry Lie theory mechanics and related fields Intended for graduate students and working mathematicians this text is a distillation of prominent research and an indication of future trends in geometry mechanics and mathematical physics

Cardinal

Invariants On Boolean Algebras James Donald Monk, 1996 This book is concerned with cardinal number valued functions defined for any Boolean algebra Examples of such functions are independence which assigns to each Boolean algebra the supremum of the cardinalities of its free subalgebras and cellularity which gives the supremum of cardinalities of sets of pairwise disjoint elements Twenty one such functions are studied in detail and many more in passing The questions considered are the behaviour of these functions under algebraic operations such as products free products ultraproducts and their relationships to one another Assuming familiarity with only the basics of Boolean algebras and set theory through to simple infinite combinatorics and forcing the book reviews current knowledge about these functions giving complete proofs for most facts A special feature of the book is the attention given to open problems of which 97 are formulated Based on *Cardinal Functions on Boolean Algebras* 1990 by the same author the present work is nearly twice the size of the original work It contains solutions to many of the open problems which are discussed in greater detail than before Among the new

topics considered are ultraproducts and Fedorchuk's theorem and there is a more complete treatment of the cellularity of free products. Diagrams at the end of the book summarize the relationships between the functions for many important classes of Boolean algebras including tree algebras and superatomic algebras. Review: This book is an indispensable tool for anyone working in Boolean algebra and is also recommended for set theoretic topologists. Zentralblatt MATH [String-Math 2014](#) Vincent Bouchard, Charles Doran, Stefan Méndez-Diez, Callum Quigley, 2016-06-10. The conference String Math 2014 was held from June 9-13, 2014 at the University of Alberta. This edition of String Math is the first to include satellite workshops: String Math Summer School held from June 2-6, 2014 at the University of British Columbia; Calabi-Yau Manifolds and their Moduli held from June 14-18, 2014 at the University of Alberta; and Quantum Curves and Quantum Knot Invariants held from June 16-20, 2014 at the Banff International Research Station. This volume presents the proceedings of the conference and satellite workshops. For mathematics, string theory has been a source of many significant inspirations ranging from Seiberg-Witten theory in four manifolds to enumerative geometry and Gromov-Witten theory in algebraic geometry to work on the Jones polynomial in knot theory to recent progress in the geometric Langlands program and the development of derived algebraic geometry and n -category theory. In the other direction, mathematics has provided physicists with powerful tools ranging from powerful differential geometric techniques for solving or analyzing key partial differential equations to toric geometry to K-theory and derived categories in D-branes to the analysis of Calabi-Yau manifolds and string compactifications to modular forms and other arithmetic techniques. Articles in this book address many of these topics.

Energy of Knots and Conformal Geometry Jun O'Hara, 2003. Energy of knots is a theory that was introduced to create a canonical configuration of a knot, a beautiful knot which represents its knot type. This book introduces several kinds of energies and studies the problem of whether or not there is a canonical configuration of a knot in each knot type. It also considers this problem in the context of conformal geometry. The energies presented in the book are defined geometrically. They measure the complexity of embeddings and have applications to physical knotting and unknotting through numerical experiments. Contents: In Search of the Canonical Optimal Embedding of a Knot; Energy Functional on E_2 Norm; Energy with Higher Index Numerical Experiments; Stereo Pictures of E_2 Minimizers; Energy of Knots in a Riemannian Manifold; Physical Knot Energies; Energy of Knots from a Conformal Geometric Viewpoint; Preparation from Conformal Geometry; The Space of Non-Trivial Spheres of a Knot; The Infinitesimal Cross Ratio; The Conformal Sin Energy; $E_{\sin c}$ Measure of Non-Trivial Spheres; Appendices: Generalization of the Gauss Formula for the Linking Number; The 3-Tuple Map to the Set of Circles in S^3 ; Conformal Moduli of a Solid Torus; Kirchhoff Elastica; Open Problems and Dreams. Readership: Graduate students and researchers in geometry, topology and numerical/computational mathematics.
