Alford, 2005-05-12 This book examines the use and abuse of the term freedom Based on interviews with people concerning the nature of freedom the author compares what the people he talked with said about freedom with what writers and thinkers such as Jean Paul Sartre Herbert Marcuse and Iris Murdoch have to say about freedom He concludes that the political is not the answer and that most of the people interviewed for the book and those like them would be better served by learning the political and social skills necessary to carve out small spaces of freedom in a rationalized world **Strong**

**Anticipation: Compensating Delay And Distance** Susie Vrobel, 2023-12-06 This book is concerned with the notion of strong anticipation Clearly defined necessary and sufficient conditions are laid out The focus lies on strong anticipation as delay and distance compensation as in temporal recalibration and synchronization of coupled systems Of particular interest are delays which correspond to a boundary shift between a systemic whole and its context Such boundary shifts result from assignment conditions which determine what belongs to the systemic whole and what belongs to its context Delay and distance compensation is described along with long range correlations against the background of a theory of time capable of describing anticipative systems My Theory of Fractal Time describes anticipatory systems in terms of two temporal dimensions succession and simultaneity which are defined and measured in tdepth tlength and tdensity These extensions form an extended present and allow a quantified comparison of obserpant observer participants temporal interfaces Compensated delays are revealed as phenomenal blind spots which result in a new kind of relativity What may be compensated for obserpant A is delayed for obserpant B Compensated delays are ubiquitous and can be found in both cognitive and physical processes Examples are temporal recalibration to restore degraded visuomotor adaptation coupling environment and brain biosemiotics and homeostatic processes dynamical diseases embedded and situated robots control loops with inserted or removed delays cellular automata analog and digital notions of trust transitional objects and potential spaces our perception of time and judgement of duration It is proposed that compensated delays emerge as natural laws
