Loss And Restoration Of Regenerative Capacity In Tissue And Organs Of Animals:

Loss and Restoration of Regenerative Capacity in Tissues and Organs of Animals Lev Vladimirovich Polezhaev, 1972 This well illustrated monograph is the first summary in English of L V Polezhaev's important but lesser known work on the regenerative phenomena in mammalian forms conducted since World War II During this period Soviet research underwent a pronounced shift in emphasis from basic biological studies based primarily upon amphibians to more practically oriented problems in mammalian systems Polezhaev's experimentation underwent a corresponding shift but the focus on restoration of lost regenerative capacity was retained since his earlier work which is also reviewed here on limb regeneration in frogs Following a theoretical discussion the monograph centers upon the author's most profound innovations a successful method for producing bone to heal large skull defects original research on heart regeneration and trials in the restoration of limb regeneration following X irradiation *The Physiology of Bioelectricity in Development, Tissue Regeneration and Cancer* Christine E. Pullar, 2016-04-19 Recent advances in technology have led to the unprecedented accuracy in measurements of endogenous electric fields around sites of tissue disruption State of the art molecular approaches demonstrate the role of bioelectricity in the directionality and speed of cell migration proliferation apoptosis differentiation and orientation New informat Organ Regeneration L. D. Liozner, 2013-03-09 The main theme of this monograph conditions of regeneration of organs in mammals reflects an area of increasing emphasis which permeates much current Soviet research on regeneration The introduction of this theme goes back about 25 years and emphasis on the influence of environmental conditions upon regenerative processes has fluctuated until the mid 1960s when the viewpoints on this subject were established in much the same form as they are expressed in this book For years Russian regeneration research has been characterized by the presence of several dominant and often conflicting schools of thought Since an acquaintance with these makes the interpretation of many of the theoretical implications of this book particularly in the introductory and concluding chapters considerably clearer those not familiar with the Russian literature might profit by reading my brief survey of this field Carlson B M 1968 Regeneration research in the Soviet Union Anat Rec 160 665 674 Regenerative Biology and Medicine David L. Stocum, 2010-07-26 The purpose of the book is to bring together in one place the different facets of regenerative biology and medicine while providing the reader with an overview of the basic and clinically oriented research that is being done Not only does the content cover a plethora of tissues and systems it also includes information about the developmental plasticity of adult stem cells and the regeneration of appendages As part of its balanced presentation Regenerative Biology and Medicine does address the biological bioethical issues and challenges involved in the new and exciting field of regenerative biology and medicine Tissues covered include skin hair teeth cornea and central neural types Systems presented are digestive respiratory urogenital musculoskeletal and cardiovascular Includes amphibians as powerful research models Discusses appendage regeneration in amphibians and mammals *Biology Bulletin of the*
