themselves from other animals by not taking immediate experience for granted Everything was symbolized according to its meaning and value a fallen branch from a tree became a lever a tree trunk floating in the river became a canoe Homo logos created communities based on cultures humanity s first megaproject Further symbolization of the human community and its relation to nature led to the possibility of creating societies and civilizations Everything changed as these interposed themselves between the group and nature Homo societas created ways of life able to give meaning direction and purpose to many groups by means of very different cultures humanity s second megaproject What Das Kapital did for the nineteenth century and La technique did for the twentieth Willem H Vanderburg s Living in the Labyrinth of Technology seeks to create for the twenty first century an attempt at understanding the world in a manner not shackled to overspecialized scientific knowing and technical doing Western civilization may well be creating humanity s third megaproject based not on symbolization for making sense of and living in the world but on highly specialized desymbolized knowing stripped of all peripheral understanding Vanderburg focuses on two interdependent forces in his narrative namely people changing technology and technology changing people The latter aspect although rarely considered turns out to be the more critical one for understanding the spectacular successes and failures of contemporary ways of life As technology continues to change the social and physical world the experiences of this world grow people s minds and society s cultures thereby re creating human life in the image of technology Living in the Labyrinth of Technology argues that the twenty first century will be dominated by this pattern unless society intervenes on human as opposed to technical terms

A Final Story Nasser Zakariya,2017-11-14 Popular science readers embrace epics the sweeping stories that claim to tell the history of all the universe from the cosmological to the biological to the social And the appeal is understandable in writing these works authors such as E O Wilson or Steven Weinberg deliberately seek to move beyond particular disciplines to create a compelling story weaving together natural historical events scientific endeavor human discovery and contemporary existential concerns In A Final Story Nasser Zakariya delves into the origins and ambitions of these scientific epics from the nineteenth century to the present to see what they reveal about the relationship between storytelling integrated scientific knowledge and historical method While seeking to transcend the perspectives of their own eras the authors of the epics and the debates surrounding them are embedded in political and social struggles of their own times struggles to which the epics in turn respond In attempts to narrate an approach to a final true account these synthesizing efforts shape and orient scientific developments old and new By looking closely at the composition of science epics and the related genres developed along with them we are able to view the historical narrative of science as a form of knowledge itself one that discloses much about the development of our understanding of and relationship to science over time

Rabbinic Authority Michael S. Berger, 1998-10-15 The Rabbis of the first five centuries of the Common Era loom large in the Jewish tradition Until the modern period Jews viewed the Rabbinic traditions as the authoritative contents of their covenant with God and scholars debated the meanings of these ancient Sages words Even after the eighteenth century when varied denominations emerged within Judaism each with its own approach to the tradition the literary legacy of the talmudic Sages continued to be consulted In this book Michael S Berger analyzes the notion of Rabbinic authority from a philosophical standpoint He sets out a typology of theories that can be used to understand the authority of these Sages showing the coherence of each its strengths and weaknesses and what aspects of the Rabbinic enterprise it covers His careful and thorough analysis reveals that owing to the multifaceted character of the Rabbinic enterprise no single theory is adequate to fully ground Rabbinic authority as traditionally understood The final section of the book argues that the notion of Rabbinic authority may indeed have been transformed over time even as it retained the original name Drawing on the debates about legal hermeneutics between Ronald Dworkin and Stanley Fish Berger introduces the idea that Rabbinic authority is not a strict consequence of a preexisting theory but rather is embedded in a form of life that includes text interpretation and practices Rabbinic authority is shown to be a nuanced concept unique to Judaism in that it is taken to justify those sorts of activities which in turn actually deepen the authority itself Students of Judaism and philosophers of religion in general will be intrigued by this philosophical examination of a central issue of Judaism conducted with unprecedented rigor and refreshing creative insight
