Numerical Methods Of Approximation Theory Numerische Methoden Der Approximations Theorie Vol 7:

Numerical Methods of Approximation Theory, Vol.6 \ Numerische Methoden der Approximationstheorie, Band 6 Collatz, Meinardus, Werner, 2012-12-06 Der Band enthält Manuskripte zu Vorträgen die auf einer von den Herausgebern geleiteten Tagung über Numerische Methoden der Approximationstheorie am Mathematischen Forschungsinstitut Oberwolfach in der Zeit vom 18. bis 24. Januar 1981 gehalten wurden. Das Spektrum der Vorträge reichte von der klassischen Approximationstheorie über mehrdimensionale Approximationsverfahren bis hin zu praxisbezogenen Fragestellungen. Zu den zuerst genannten Gebieten gehörten z. B. die Verfeinerung von Fehlerabschätzungen bei der Polynominterpolation, Fragen zur Eindeutigkeit, Charakterisierung optimaler Interpolationsprozesse und Algorithmen zur rationalen Interpolation. Bei den weiteren genannten Gebieten spiegeln zahlreiche Vorträge das steigende Interesse an der mehrdimensionalen Interpolation insbesondere mit verschiedenen Arten von Splines wider. Hier standen u. a. Probleme der Parameterschätzung in der Medizin und Flugtechnik, Fragen der Approximationstheorie bei der Konstruktion von Plottern und stabile Algorithmen beim Arbeiten mit mehrdimensionalen B-Splines im Mittelpunkt des Interesses. Die Tagung lieferte einen repräsentativen Überblick über die aktuellen Trends in der Approximationstheorie. Zum guten Erfolg der Tagung trug wie immer die hervorragende Betreuung durch die Mitarbeiter und Angestellten des Instituts so wie das verständnisvolle Entgegenkommen des Institutsdirektors Herrn Professor Dr. Barner bei. Unser besonderer Dank gilt dem Birkhäuser Verlag für die wie stets sehr gute Ausstattung. Helmut Werner, Lothar Collatz, Günther Meinardus, Hamburg, Mannheim, Bonn.

Numerische Methoden der Approximationstheorie/Numerical Methods of Approximation Theory

Meinardus, Collatz, Werner, 2013-11-11 Der vorliegende Band stellt Vortragsmanuskripte einer am Mathematischen Forschungsinstitut Oberwolfach in der Zeit vom 25. bis 31. Mai 1975 veranstalteten Tagung zusammen, die unter der Leitung der Unterzeichner stand. Die letzten dieser Tagungen über numerische Methoden der Approximationstheorie fanden 1971 und 1973 statt. Der Schwerpunkt lag bei Fragen der Numerik von Algorithmen zur Darstellung von Funktionen, ließen aber bereits ein wachsendes Interesse an Anwendungen erkennen. Die diesjährige Tagung war gekennzeichnet durch die Behandlung praktischer Aufgabenstellungen sowie durch die Einbeziehung der Anwendungen aus Nachbargebieten bzw. die Verwendung der Methoden dieser Gebiete in der Approximationstheorie. Insbesondere wurde auch auf die Beziehungen von Optimierung und Kontrolltheorie zu speziellen approximationstheoretischen Aufgaben eingegangen. Der starke Einfluss auf die numerischen Methoden zur Behandlung von Differentialgleichungen wurde etwa bei der Methode der finiten Elemente oder

bei Kollokationsaufgaben deutlich. So ist zu hoffen, da auch diese Tagung dazu beigetragen hat, Theorie und Anwendungen wieder stärker zu verbinden. Die spezifische Atmosphäre des Forschungsinstituts stimulierte einen intensiven durch die breite internationale Streuung der Tagungsteilnehmer verstärkten fruchtbaren Gedankenaustausch. Zum Erfolg der Tagung trug wie immer die hervorragende Betreuung durch die Mitarbeiter und Angestellten des Forschungsinstituts und das verständnisvolle Entgegenkommen von Herrn Kollege Barner bei. Unser besonderer Dank gilt ferner dem Birkhäuser Verlag für die sehr gute Ausstattung des Buches. L. COLLATZ, G. MEINARDUS, H. WERNER: Inhaltsverzeichnis. ANSELONE, P. M., LEE, J. W.: *Double Approximation Methods for the Solution of Fredholm Integral Equations*. Numerische Methoden der Approximationstheorie. Helmut Werner, 1972. Das Mathematische Forschungsinstitut Oberwolfach veranstaltet seit längerer Zeit in etwa zweijährigem Turnus Tagungen über numerische Methoden der Approximationstheorie. Die Vortragsauszüge der diesjährigen Tagung, die vom 13. bis 19. Juni stattfand, sind in dem vorliegenden Band zusammengefasst. Die Themen lassen erkennen, da es ein besonderes Anliegen der Tagungsleiter war, die Kluft zwischen abstrakter Mathematik und den Anwendungen verringern zu helfen. Approximationstheoretische Fragestellungen scheinen geeignet zu sein, hier neue Brücken zu schlagen. Der starke Zustrom ausländischer Mathematiker, insbesondere aus der UdSSR, zeigt, da diese Bestrebungen auch in anderen Ländern Resonanz finden. In zunehmendem Maße sind solche aus den äußeren und innermathematischen Anwendungen herrührenden Fragestellungen zu behandeln, die sich nicht in klassische Approximationstheorie einordnen lassen. So wurde z. B. von Vertretern der Nachrichtentechnik über in ihrem Bereich auftretende ungewöhnliche Approximationsprobleme berichtet. Andere Vorträge beschäftigten sich mit Approximationsfragen, die aus gewissen Aufgaben der angewandten Mathematik erwachsen, z. B. Behandlung von Differential- und Integralgleichungen. Zwei weitere Schwerpunkte bildeten die Beziehungen zur Optimierungstheorie, die insbesondere zu effektiven numerischen Verfahren führen, sowie Untersuchungen über Spline-Approximationen. Professor Steckin aus Moskau war leider an der Teilnahme verhindert und hat statt dessen das hier abgedruckte Manuskript übersandt. *Numerische Methoden der Approximationstheorie*, 1979. These are the proceedings of the international conference on Nonlinear numerical methods and Rational approximation II, organised by Annie Cuyt at the University of Antwerp, Belgium, 05-11 September 1993. It was held for the third time in Antwerp at the conference center of UIA after successful meetings in 1979 and 1987 and an almost yearly tradition since the early 70s. The following figures illustrate the growing number of participants and their geographical dissemination. In 1993 the Belgian scientific committee consisted of A. Bultheel (Leuven), A. Cuyt (Antwerp), J. Meinguet (Louvain-la-Neuve) and J.-P. Thiran (Namur). The conference focused on the use of rational functions in different fields of Numerical Analysis.

The invited speakers discussed Orthogonal polynomials D S Lubinsky Rational interpolation M Gutknecht Rational approximation E B Saff Padé approximation A Gonchar and Continued fractions W B Jones In contributed talks multivariate and multidimensional problems applications and implementations of each main topic were considered To each of the five main topics a separate conference day was devoted and a separate proceedings chapter compiled accordingly In this way the proceedings reflect the organisation of the talks at the conference Nonlinear numerical methods and rational approximation may be a narrow field for the outside world but it provides a vast playground for the chosen ones It can fascinate specialists from Moscow to South Africa from Boulder in Colorado and from sunny Florida to Zurich in Switzerland
