McSeán, John van Loo, 2012-12-06. The 1994 conference of the European Association for Health Information and Libraries drew together an exceptional group of invited speakers and contributed papers. Speakers came from every part of Europe, from N America and even from Australia, and almost all the papers presented are collected in this volume. They represent an important summary of the state of the art in libraries and information services in the medical and health areas and are a rich source of advice, assistance, and information for everyone working in related fields. Most of the themes concentrate on the important growth areas of the profession: computer-based information services, networking, especially the Internet, and CD-ROMs. More general topics are not ignored, and the book contains many interesting contributions on identifying the needs of library users and evaluating how well these are being met. There is also an important section on the history of medicine.

Making Knowledge Visible Elizabeth Orna, 2017-03-02. This ground-breaking book opens up new territory for knowledge and information management. The only way we can make what we know visible to other people is by putting it into Information Products, the products in any medium where users meet the information they need and gain access to the knowledge of others. Without them, little business would get done inside organizations or between them and the outside world. They are essential for the flow, exchange, application, and preservation of information and knowledge. This is the first book to make the case for the proper recognition of information products by organizations. It shows how they should support business objectives and processes and be incorporated into information strategy and information architecture. It illustrates the value they can both add and subtract, identifies the full range of stakeholders in them, and argues that a triple alliance of information management, information systems, IT, and information design is critical for successful information products. Stories from real life illustrate every step of the argument. The final part of the book demonstrates how an actual organization used information auditing as a tool to develop a strategic information product for an important user community.
