Frankel, Ernesto Stein, Shang-Jin Wei, 1997 Covers trends from 1957 to 1995 *Introduction to Intercultural Economics* Rongxing Guo, 2012-04-23 This book presents a methodological framework for the analysis of intercultural issues frequently misinterpreted by existing theories It uses a challenge and response theory of cultural development to examine the relationship between different natural disasters and threats and the developments of ancient civilizations The spatial interaction of ancient civilizations is assessed and four

non linear patterns of intercultural dynamics are presented Our empirical analyses of the four major ancient civilizations the Mesopotamian the Egyptian the Indus and the Chinese focus on intercultural influences as well as how they have shaped the spatial dynamics of the world as a whole This book also examines various aspects of intercultural economic influences such as those of culture on international trade Evidence from a broad panel of nations supports the presumption that high income trade partners will be less sensitive to the measures of cultural dissimilarity than low income trade partners between which cultural dissimilarity leads to barriers to international trade The treatment of linguistic and religious factors as continuous variables in this book has improved past studies in which language was treated as one or more dummy variables and religion was ignored *Cultural Influences on Economic Analysis* R. Guo, 2006-10-10 This book examines the influences of various cultural factors on economic analyses that could be misrepresented by existing economic theories Most significantly the book measures the cultural diversity and bilateral similarity indexes of the existing 200 or more countries and regions and quantifies their impacts on economic activities Economics Reading Lists, Course Outlines, Exams, Puzzles & Problems, 1995 **Journal of Economic Literature**, 1992 *Handbook of Research Methods and Applications in Economic Geography* Charlie Karlsson, Martin Andersson, Therese Norman, 2015-02-27 The main purpose of this Handbook is to provide overviews and assessments of the state of the art regarding research methods approaches and applications central to economic geography The chapters are written by distinguished researchers from a variety Economic Analysis and Policy, 1990 Convergence and Divergence Among European Regions Roger William Vickerman, Harvey Armstrong, 1995 The various studies in this book constitute a useful resource of the current level of knowledge on the pattern of and trends in regional disparities in the European Union What they tend to show is that there remains enormous diversity in terms of production structures responsiveness to exogenous stimuli behaviour of labour markets and growth Abstracts of Public Administration, Development, and Environment, 1993 **Thematic Encyclopedia of Regional Science** Peter Nijkamp, Karima Kourtit, Kingsley E. Haynes, Zeynep Elburz, 2025-08-11 This thematic Encyclopedia explores the multifaceted world of regional science presenting a systematic and coherent overview of its central topics It highlights the interdisciplinary nature of the field examining the wide range of concepts theories methods and models that shape spatial oriented approaches to the social sciences Empirical Modelling in Regional Science Timo Mitze, 2012-01-05 Economic agents interact in structural relationships through time and space This work starts from the empirical observation that all three dimensions namely time space and structural functional forms are important for an integrative framework of modern empirical analysis in regional science The work thus aims at combining up to date econometric tools from the fields of spatial econometrics panel time series analysis and structural simultaneous equation modelling to analysis the different research questions at hand Most of the topics dealt within this work start from a concrete empirical problem while problem solving also aims at generating some new knowledge in a methodological way e g by the complementary use of Monte Carlo

simulation studies to compare the empirical performance of different estimators for specific data samples Following a first introductory chapter the work is structured in three parts addressing major issues in building up a stylized regional economic model such as interregional migration factor and final demand estimation All empirical applications use German regional data

The World Economy, 1991 Covers trade policy and other open economy issues embracing international trade and the environment international finance and trade and development It also considers related areas such as economies in transition and development economics

How the Chinese Economy Works Rongxing Guo, 2007 What are the driving forces both endogenous and exogenous for and how have they influenced China's economic transformations during the past decades This revised and updated second edition sets out to analyze and compare the operational mechanisms of the Chinese economy between the pre and post reform periods and through both national and provincial dimensions A multiregional comparison of the Chinese economy is conducted in terms of natural and human resources institutional evolution as well as economic and social performances The first edition of this book was selected as the Best Book on Chinese Economy by Questia librarians

Intercultural Economic Analysis Rongxing Guo, 2009-08-29 Since the end of the Cold War the study of intercultural relations has become one of the most popular topics in the field of global politics and economics This book presents a methodological framework for the analysis of intercultural issues frequently misinterpreted by existing theories The book uses a challenge and response theory of cultural development to examine the relationship between different natural disasters and threats and the developments of ancient civilizations The spatial interaction of ancient civilizations is assessed and some theoretical patterns of intercultural influences are presented with a focus on the Chinese Egyptian Indus and Mesopotamian civilizations Using the development of China as a case study and on the basis of a simplified spatial model the optimal spatial structure and size of culture areas are mathematically solved and the political economy implications to the interactions between cultures differing in size are illustrated The book also examines various aspects of intercultural economic influences such as those of culture on international trade The empirical results suggest that high income trade partners are less sensitive than low income trade partners to the measures of cultural dissimilarity which block international trade The existing literature relating to the determinants of economic growth treats explanatory variables such as income inequality and cultural diversity separately This book investigates whether there are any conditions under which income inequality and cultural diversity could encourage economic growth and provides evidence from a broad panel of nations which reveals that economic growth is quite independent from the variables of inequality and cultural linguistic and religious diversity Finally this book provides suggestions for how cultural influences can benefit developing economies both large and small
