Protein NMR Techniques A. Kristina Downing, 2008-02-03 When I was asked to edit the second edition of Protein NMR Techniques my first thought was that the time was ripe for a new edition The past several years have seen a surge in the development of novel methods that are truly revolutionizing our ability to characterize biological macromolecules in terms of speed accuracy and size limitations I was particularly excited at the prospect of making these techniques accessible to all NMR labs and for the opportunity to ask the experts to divulge their hints and tips and to write practically about the methods I commissioned 19 chapters with wide scope for Protein NMR Techniques and the volume has been organized with numerous themes in mind Chapters 1 and 2 deal with recombinant protein expression using two organisms E. coli and P. pastoris that can produce high yields of isotopically labeled protein at a reasonable cost Staying with the idea of isotopic labeling Chapter 3 describes methods for perdeuteration and site specific protonation and is the first of several chapters in the book that is relevant to studies of higher molecular weight systems A different but equally powerful method that uses molecular biology to edit the spectrum of a large molecule using segmental labeling is presented in Chapter 4 Having successfully produced a high molecular weight target for study the next logical step is data acquisition Hence the final chapter on this theme Chapter 5 describes TROSY methods for structural studies

Python Scripting for Computational Science Hans Petter Langtangen, 2013-03-14 The primary purpose of this book is to help scientists and

engineers working intensively with computers to become more productive have more fun and increase the reliability of their investigations Scripting in the Python programming language can be a key tool for reaching these goals 27 29 The term scripting means different things to different people By scripting I mean developing programs of an administering nature mostly to organize your work using languages where the abstraction level is higher and programming is more convenient than in Fortran C C or Java Perl Python Ruby Scheme and Tcl are examples of languages supporting such high level programming or scripting To some extent Matlab and similar scientific computing environments also fall into this category but these environments are mainly used for computing and visualization with built in tools while scripting aims at gluing a range of different tools for computing visualization data analysis file directory management user interfaces and Internet communication So although Matlab is perhaps the scripting language of choice in computational science today my use of the term scripting goes beyond typical Matlab scripts Python stands out as the language of choice for scripting in computational science because of its very clean syntax rich modularization features good support for numerical computing and rapidly growing popularity

What Scripting is About *Core Python Programming* Wesley Chun, 2001 Experts and novices alike will be able to find information about every command they'll need to use Linux This complete practical desk reference is organized by function with a road map style alphabetical reference for quick access of information about all aspects of running and administering the program The CD ROM contains Windows and Linux Python distributions plus extensive cross platform source code from the book
