Glöckner, 1987-02-01 The main subject of this

book is the characterization of plastics To a high degree the properties of these polymers depend on the distribution of the molar mass and of other structural features and small deviations frequently have a great effect Therefore the characterization of polymers cannot be restricted to the determination of mean values but must yield information on these distributions Using classical methods the analytical fractionation of polymer homologues and structurally isomeric polymers is extremely time consuming Therefore efficient chromatographic techniques are being increasingly employed in modern polymer characterization In the first place high performance liquid chromatography is applied in the form of size exclusion chromatography It is also possible however to use other separation modes More space is devoted to these other possibilities in this volume than is merited by their current range of applications as the author believes that many separation problems will be solved by separation techniques of the non exclusion type Nevertheless much emphasis is placed on size exclusion chromatography Not only because of its current wide range of applications but also because its relative importance as a complement to other chromatographic techniques may even increase in the forthcoming years This book is the first to cover all phenomena related to the above considerations Starting with an introduction to basic liquid chromatography and to polymer science it deals with the adsorption behaviour of polymers with gradient techniques with the kinetic band broadening in liquid chromatography with instrumental features and packing materials The book consists of four balanced sections and related information from about 1800 references is compiled in the tables Some 250 figures and 30 tables will help give the reader a clear insight of the topics discussed The book is aimed at helping the analyst or polymer chemist who is looking for information about chromatographic methods for the characterization of polymers **Thin Layer**
