Secretion and Its Control Society of General Physiologists. Symposium,1989      Oral Antidiabetics Jochen Kuhlmann,Walter Puls,2013-11-11 The prevalence of diabetes continues to increase worldwide Traditionally diabetes in its adult form has not been considered a serious life threatening disease This attitude needs to be changed because the complications asso ciated with the adult form of diabetes affect almost every organ system The high morbidity and mortality of non insulin dependent diabetes mellitus NIDDM suggest that current treatment strategies are unsatisfactory We therefore face an urgent need for new therapeutic approaches When the first Handbook 0 Oral Antidiabetics was edited by H Maske in 1971 the risks and benefits associated with the use of oral antidiabetics were still under discussion Nowadays oral antidiabetics hold a strong posi tion in the long term treatment of diabetes Roughly 30% 50% of the patients with diabetes in Europe and the United States are treated with oral antidiabetics chiefly sulfonylureas While acknowledging the value of the cytotropic sulfonylureas we also need to recognize important limitations of their use e g in the treatment of obese diabetic patients      日本糖尿病学会 (Japan),1972      日本糖尿病学会,1992      Secretion and Its Control Society of General Physiologists. **Potassium Channels** Nigel S. Cook,1990      **GTPases in Biology I** ,2012-12-06 Recent advances in molecular biology have shown GTPases and phosphoproteins to be the paramount molecular switches utilized intracellularly in biological systems The origins of the GTPase switch appear to be almost as ancient as life itself and through evolution nature has adapted this switch to a variety of purposes In this two volume work a broad survey of the major classes of GTPases is presented The role of GTPases in ensuring accuracy during protein translation a new look at the trimeric G protein cycle the molecular function of ARF in vesicle coating the emerging role of the dynamin family in vesicle transfer GTPases which

activate GTPases during nascent protein translocation and the many roles of ras related proteins in growth cytoskeletal polymerization and vesicle transfer are all described in 80 chapters by the leading authorities in their fields Both detailed knowledge of specific systems or proteins and general principles of structure and function are offered Much of this information has never been published before At the rate the extended family of GTPases is growing it becomes increasingly unlikely that we will again get it to sit for a group portrait such as this Therefore the volume has the chance to become the reference work for GTPases

**Mathematical Physiology** James Keener, James Sneyd, 2010-06-04 Divided into two volumes the book begins with a pedagogical presentation of some of the basic theory with chapters on biochemical reactions diffusion excitability wave propagation and cellular homeostasis The second more extensive part discusses particular physiological systems with chapters on calcium dynamics bursting oscillations and secretion cardiac cells muscles intercellular communication the circulatory system the immune system wound healing the respiratory system the visual system hormone physiology renal physiology digestion the visual system and hearing New chapters on Calcium Dynamics Neuroendocrine Cells and Regulation of Cell Function have been included Reviews from first edition Keener and Sneyd's Mathematical Physiology is the first comprehensive text of its kind that deals exclusively with the interplay between mathematics and physiology Writing a book like this is an audacious act Society of Mathematical Biology Keener and Sneyd's is unique in that it attempts to present one of the most important subfields of biology and medicine physiology in terms of mathematical language rather than organizing materials around mathematical methodology SIAM review

**Eckert Animal Physiology** David J. Randall, Warren Burggren, Kathleen French, Roger Eckert, 2002 This classic animal physiology text focuses on comparative examples that illustrate the general principles of physiology at all levels of organisation from molecular mechanisms to regulated physiological systems to whole organisms in their environment This textbook is an authoritative and complete guide to the field of animal physiology which uses a threefold approach to teaching The Comparative Approach emphasises basic mechanisms but allows patterns of physiological function in different species to demonstrate how evolution creates diversity This approach encourages students to appreciate the underlying principles that govern physiological systems The Experimental Emphasis helps students to understand the process of scientific discovery and shows how our knowledge of physiology continually increases and finally the Integrative Approach presents information about specific physiological systems at all levels of organisation from molecular interactions to interactions between an organism and its environment n included

53rd National Meeting of the Italian Society of Biochemistry and Molecular Biology (SIB) and National Meeting of Chemistry of Biological Systems - Italian Chemical Society (SCI - Section CSB) Firenze University Press, Italian Chemical Society, Società italiana di biochimica, The 53rd National Congress of the Italian Society of

Biochemistry and Molecular Biology SIB which will be held in Riccione from 23 to 26 September is characterised by the elevated scientific level and interdisciplinary interest of the numerous sessions in which it is organised. The Scientific Programme comprises three joint Symposia of the SIB and the Chemistry of Biological Systems section of the Italian Chemistry Society: SCI on Molecular Systems Biology, Chemistry of Nucleic Acids, Protein and Drug Structure and Environmental Biotechnology. These Symposia address groundbreaking arguments making the joint interest of the two societies particularly fascinating. The joint organisation of these events in fact signals the shared intention to proceed along the path of scientific exchange. The topics of the other sessions have been chosen by the Scientific Committee on the basis of their scientific relevance and topicality with particular attention paid to the selection of the speakers. The SIB sessions will range from Signal Transduction and Biomolecular Targets, Protein Misfolding and its Relationship with Disease, Emerging Techniques in Biochemistry, Gene Silencing, Redox Signalling and Oxidative Stress, Lipids in Cell Communication and Signal Transduction, Mitochondrial Function and Dysfunction.

**Clinics** Frank Pierce Foster, 1888      *Knobil and Neill's Physiology of Reproduction*, 2005-12-12. The 3rd edition, the first new one in ten years, includes coverage of molecular levels of detail arising from the last decade's explosion of information at this level of organismic organization. There are 5 new Associate Editors and about 2/3 of the chapters have new authors. Chapters prepared by return authors are extensively revised. Several new chapters have been added on the topic of pregnancy, reflecting the vigorous investigation of this topic during the last decade. The information covered includes both human and experimental animals. Basic principles are sought and information at the organismic and molecular levels are presented. The leading comprehensive work on the physiology of reproduction. Edited and authored by the world's leading scientists in the field. Is a synthesis of the molecular, cellular and organismic levels of organization. Bibliographies of chapters are extensive and cover all the relevant literature.

**Channel Modulation** A. D. Grinnell, 2012-12-06. Cellular neurobiology has been transformed in the past decade by new technologies and fundamental discoveries. One result is an enormous increase in our understanding of how ion channels function in nerve and muscle cells and a widening perspective on the role of ion channels in non-neuronal cell physiology and development. Patch-clamp techniques now permit direct observation of the transitions between functional conformations of individual ion channels in their native membrane. Recombinant DNA techniques are being used to determine the primary structure of ion channel proteins and to test hypotheses about channel conformations, sites of gating and modulation and the basis of ion selectivity. At the same time, biochemical techniques have revealed intricate signalling systems in cells involving second messengers such as calcium, phospholipids and cyclic nucleotides which interface with the external milieu through GTP-binding proteins and regulate cell metabolism by altering protein phosphorylation. This panorama of second messenger systems has greatly increased our appreciation for their potential role in regulating ion channel function. We now

recognize that ion channels are much more complicated than we once thought and more interesting. They are not simply isolated macro molecules in the membrane gated directly by depolarization or transmitter binding to open briefly at a fixed conductance and then close or inactivate. Instead individual channels now appear to have many open and closed states that are regulated independently by voltage and transmitters.

**British Physiologists 1885-1914** W. J. O'Connor, 1991. A collection of biographical notes of some 350 men who were physiologists in the years 1885-1914. The notes are grouped under the University or Medical School in which the men worked and together with brief explanatory paragraphs the biographies aim to provide a history of the development of medical science in each institution over the years before the Great War of 1914-1918. The biographies extend to the end of each man's life providing some account of physiology in the 1920s and 1930s and even longer.
