been established to motivate researchers to tackle difficult problems while providing a framework for the comparison of results RoboCup was one of the first such competitions and has been a model for the organization of challenges following sound scientific principles In addition to the competition the associated symposium provides a forum for researchers to present refereed papers But for RoboCup the symposium has the greater goal of encouraging the exchange of ideas between teams so that the competition as a whole progresses from year to year and strengthens its contribution to robotics One hundred and eighteen papers were submitted to the Symposium Each paper was reviewed by at least two international referees 30 papers were accepted for presentation at the Symposium as full papers and a further 38 were accepted for poster presentation The quality of the Symposium could not be maintained without the support of the authors and the generous assistance of the referees

Phenomenal Intentionality Uriah Kriegel, 2013-01-09 Since the late 1970s the main research program for understanding intentionality the mind's ability to direct itself onto the world has been based on the attempt to naturalize intentionality in the sense of making it intelligible how intentionality can occur in a perfectly natural indeed entirely physical world Some philosophers however have remained skeptical of this entire approach In particular some have argued that phenomenal consciousness the subjective feel of conscious experience has an essential role to play in the theory of intentionality a role missing in the naturalization program Thus a number of authors have recently brought to the fore the notion of phenomenal intentionality as well as a cluster of nearby notions There is a vague sense that their work is interrelated complementary and mutually reinforcing in a way that suggests a germinal research program With twelve new essays by philosophers at the forefront of the field this volume is designed to launch this research program in a more self-conscious way by exploring some of the fundamental claims and themes of relevance to this program

Instability and Variability of Hot-Star Winds Anthony F.J. Moffat,Stanley P. Owocki,Alex W. Fullerton,Nicole St-Louis,2012-12-06 This specialized workshop was conceived during the workshop on Non

isotropic and Variable Outflows from Stars which was held at the Space Telescope Science Institute in October 1991. At that meeting the four of us collectively decided that the time was ripe for an even more focussed discussion of the basic issues in the area of hot star wind instability and its observable manifestations. Not that the big problems have been solved. Rather we are currently in a phase of rapid development both with regard to the models and to the observations. The key issue at this new workshop would be to decide how the time dependent structures observed in hot star winds e.g. NACs, DACs, blobs, clumps, filaments, shells, puffs, jets etc. relate to radiative and other instabilities. Further questions concern the role of turbulence and the nature of its driver and the effect of stellar rotation, pulsation and magnetic fields on time dependent phenomena in hot star winds. Of no less importance is the impact of stellar wind variability on the derivation of mass loss rates on stellar evolution and on momentum energy deposition in the interstellar medium. To attain our goal of maximum confrontation in the positive sense we decided 1. to limit the workshop to the observers and theoreticians most active in this field in the world, 2. to insist that virtually all participants present a talk thereby avoiding the distraction of poster sessions and 3. to allocate approximately half of the allotted time to discussion.
