Feeding and Nutrition of Nonhuman primates Robert A. Harris, 2012-12-02 Feeding and Nutrition of Nonhuman Primates is a report of a two day meeting that aims to evaluate the knowledge and information regarding the diet of primates The meeting also aims to recommend significant information necessary to accomplish a standardized diet for this species The study of primates diet is relevant because it will serve as baseline data for biomedical research Comprised of 16 chapters this volume starts off with the concept of selecting nonhuman primates in the biological research The next topics are about the

observations regarding the feeding behavior of the nonhuman primates and their nutritional status. Also discussed are the feeding problems encountered by imported primates. Other problem areas in the subject of diet and nutrition are also discussed such as the effect of altering the dietary amino acids on the nutrition of a rhesus monkey and malnutrition during early life. The following chapters describe the nutritional requirements of nonhuman primates including macaque monkeys, Cebus monkeys, squirrel and woolly monkeys, marmosets and baboons. The observations regarding their feeding behavior are also discussed. Topics regarding nutritional deficiency diseases as well as their syndromes and diseases affecting their usefulness in nutrition research are also covered in this book. This compilation of research is a relevant resource for professionals, scientists and researchers in primate studies and biological biomedical research.

Primates in Nutritional Research K Hayes, 2012-12-02

Primates in Nutritional Research is a result of a workshop on primate nutrition held in October 1978. This book presents the topics in the workshop which are the nutrient requirements and various techniques of feeding monkeys and the in depth reviews of investigated aspects of nutritional research where nonhuman primates are the models for human disease. This volume has 16 chapters and is basically divided according to two main themes. The first part, Chapters 1-7, deals with the practical matters of nutritional husbandry. Topics in this section include dietary allowances for nutrients, liquid formulas and protein requirements, caloric intake and weight changes, folic acid needs and semipurified diets. The second part, Chapters 8-16, describes different models under investigation at the time of publishing. Included in this section are discussions on diet and atherosclerosis, selected aspects of metabolic behavior of the squirrel monkey, effects of dietary fat on plasma lipids, acute and chronic effects of ethanol and the induction of obesity. Students, teachers, scientists and researchers interested in nonhuman primate research will find this book very helpful. Professionals in other areas of study such as nutrition and food science, medicine, metabolic diseases and animal research will also benefit from this book.

Wildlife Feeding and Nutrition Charles T. Robbins, 2013-09-03

Wildlife Feeding and Nutrition fills a serious gap in the wildlife and animal nutrition literature by providing a discussion of the basic principles of nutrition and their application to the broader field of wildlife ecology. This book is based on lectures presented in an upper level wildlife nutrition course taught at Washington State University. The book opens with an introductory chapter on wildlife nutrition. This is followed by separate chapters on general nutrient and energy requirements, protein, water, vitamin and mineral requirements, impact of nutrition on reproductive characteristics, gastrointestinal anatomy and function and digestion and nutrient metabolism. The text will be invaluable to wildlife biologists, to those who are interested in captive animal nutrition and management and to those who are interested in improving the feed supply and nutrition of free ranging wildlife.

It should also be helpful to undergraduate and graduate students as well as teachers of biology and wildlife management The book will be a useful reference for all who are interested and concerned with wildlife throughout the world Education and Training in the Care and Use of Laboratory Animals National Research Council, Division on Earth and Life Studies, Institute for Laboratory Animal Research, Commission on Life Sciences, Committee on Educational Programs in Laboratory Animal Science, 1991-02-01 Federal law now requires that institutions provide training for anyone caring for or using laboratory animals This volume provides the guidelines and resources needed to coordinate a quality training program as well as to meet all legal requirements A core module for all personnel takes no more than four hours to present Most staff then proceed to one or more additional skills development modules including the species specific module that can be customized to any species in use at the institution the pain management module and the surgery module The volume provides content information for required topics from ethics to record keeping and lists sources of additional publications audiovisual programs and computerized teaching aids Included are Ready to use teaching outlines with detailed instructions for presenting material Practical guidelines on logistics covering scheduling budgeting and more Guidelines on how to design training for adults and how to work with investigators who may resist taking training courses This practical guidebook will be necessary for research institutions particularly for staff members responsible for training coordination **Guide for the Care and Use of Laboratory Animals -- Korean Edition** National Research Council, Division on Earth and Life Studies, Institute for Laboratory Animal Research, Commission on Life Sciences, 2005-08-27 A respected resource for decades the Guide for the Care and Use of Laboratory Animals has been updated by a committee of experts taking into consideration input from the scientific and laboratory animal communities and the public at large The Guide incorporates new scientific information on common laboratory animals including aquatic species and includes extensive references It is organized around major components of animal use Key concepts of animal care and use The Guide sets the framework for the humane care and use of laboratory animals Animal care and use program The Guide discusses the concept of a broad Program of Animal Care and Use including roles and responsibilities of the Institutional Official Attending Veterinarian and the Institutional Animal Care and Use Committee Animal environment husbandry and management A chapter on this topic is now divided into sections on terrestrial and aquatic animals and provides recommendations for housing and environment husbandry behavioral and population management and more Veterinary care The Guide discusses veterinary care and the responsibilities of the Attending Veterinarian It includes recommendations on animal procurement and transportation preventive medicine including animal biosecurity and clinical care and management The Guide addresses distress and pain recognition and relief and issues surrounding euthanasia Physical plant The Guide identifies design issues providing construction guidelines for functional areas considerations such as drainage vibration and noise control and environmental monitoring and specialized facilities for animal housing and research needs The Guide for the Care and Use of Laboratory
