Placenta A Neglected Experimental Animal:

Family Values Kelly Oliver, 2018-05-11 Family Values shows how the various contradictions at the heart of Western conceptions of maternity and paternity problematize our relationships with ourselves and with others Using philosophical texts psychoanalytic theory studies in biology and popular culture Kelly Oliver challenges our traditional concepts of maternity which are associated with nature and our conceptions of paternity which are embedded in culture Oliver's intervention calls into question the traditional image of the oppositional relationship between nature and culture maternal and paternal Family Values also undercuts recent returns to the rhetoric of a battle between the sexes by analyzing the conceptual basis of these descriptions in biological research and the presuppositions of such suggestions in philosophy and psychoanalysis By developing a reconception of maternity and paternity Family Values offers hope for peace in the battle of the sexes

Placenta Peter Beaconsfield, Claude Villee, 2013-10-22 Placenta A Neglected Experimental Animal covers the proceedings of the 1978 round table discussion on placenta held at Bedford College University of London under the auspices of the Special Commission on Internal Pollution The placenta's remarkably complete spectrum of cellular and biochemical activity as well as its hormonal and endocrinological roles and its short life cycle adds to its suitability for studying the processes of cell replication immune mechanisms graft acceptance and rejection and aging This book is organized into four sections encompassing 19 chapters Section I emphasizes the process of placental metabolism This section particularly deals with the principles of metabolic regulation carbohydrate fat and protein metabolism placenta's endocrine functions and in vitro and in vivo studies of placental metabolism Section II highlights the placenta's potential to delineate cell replication processes This section describes the origin and formation of placenta and the mechanism of carcinogenesis Section III focuses on the relevance of placenta and its potential as a model for studying malignancy while Section IV examines its potential as a model for organ aging This book will be of value to cell and developmental biologists immunologists and oncologists

Immunology of Pregnancy and its Disorders C.M. Stern, 2012-12-06 The purpose of this book is to describe the nature of the materno fetal immunobiological relationship and to suggest the direction in which the management of reproduction and its failure in man is moving The several authors who have written about their special fields of interest need to be read within a framework designed to blend their contributions into a whole This preamble provides a part of that framework by describing the early development of the embryo that of the placenta and its membranes and their anatomical relationship with maternal tissues in other words the stage upon which this materno fetal dialogue takes place Professor Maureen Young's tour de force encapsulating the whole of fetal physiology into a single chapter completes the background information After Maureen Young's summary of fetal physiology Matteo Adinolfi describes the development of the immune system in the fetus including new information that allows more accurate

speculation concerning the gestational age at which fetal immune responses of various kinds may begin Charles Loke examines the nature of antigens which are found in the placenta concentrating on those which occur on syncytiotrophoblast and suggesting roles for them in fetal development Arnold Klopfer covers the wide range of proteins and hormones which have been studied during pregnancy and found to vary in a potentially significant way He has been careful to distinguish between observation and hypothesis as far as any immunomodulating action is concerned and his analysis is a model of scientific scepticism

Vertebrate Reproduction Volker Blüm, 2012-12-06 Oral birth in the Australian gastric brooding frog *Rheobatrachus sUus* 2 Preface I have deliberately chosen the title picture to the preface which shows the oral birth of a young gastric brooding frog *Rheobatrachus situs* to draw the reader's attention to the preface since I wish to explain why the book was written and illustrated in the way it now appears The book has grown out of the material of a lecture course taking 3 to 4 hours per week each semester that I have given for several years at the Ruhr University Bochum as the theoretical basis for an intensive 4 week practical course on vertebrate reproduction for students of biology For various reasons I am a hardened opponent of giving lecture notes to the students On the other hand I found that my students made great efforts to work through and supplement their own lecture notes by studying the literature However there are no suitable textbooks on vertebrate reproduction written in German and the standard work in this field is now several decades old and deals mainly with mammals The students were therefore often frustrated in their efforts given the limited time they had available I have therefore decided to present here the most important structural and functional aspects of vertebrate reproduction and include other material to extend the framework of my original lectures

Human Trophoblast Neoplasms Ronald A. Pattillo, 2013-03-13 This book addresses neoplasms of the human trophoblast The scant literature available on the epidemiology of trophoblast neoplasms suggests that they are as much as ten times more common in Africa Asia India and much of the developing world than in Western countries The stimulus for the book evolved out of a common interest to combine Western technology with the clinical experience in the developing world in a common pursuit of the study and eradication of trophoblast neoplasia There is substantial evidence to contend that gene derepression as seen in trophoblastic disease may be a universal prerequisite to neoplastic transformation in general The recent discovery that the tumor markers human chorionic gonadotropin hCG or its subunits are identifiable in over 90 percent of all extracted neoplasms suggests a critical role for this common denominator of gene derepression in neoplasia This gene derepression concept in reproductive biology and neoplasia spans many of the basic parameters of human cell replication as related to endocrinology immunology biochemistry electrophysiology genetics and pharmacology The International Society for the Study of Trophoblastic Disease focuses on the global aspects of trophoblast neoplasms These global aspects include epidemiology and etiology of the disease regional variations in treatment of trophoblastic neoplasms and potential ways to adapt and apply Western technology to effective use in developing countries It was this perspective that formed the basis for the First World Congress on

Trophoblast Neoplasms which convened in Nairobi in October 1982 **Placenta** Peter Beaconsfield,1979 **Fetal and Neonatal Pathology** Jean W. Keeling,2013-03-09 Fetal and Neonatal Pathology presents in one volume an account of the pathological findings encountered when examining fetuses from the second and third trimester of pregnancy as well as in neonatal death It provides essential clinical and physiological information and discusses the pathogenesis of pathological findings as a guide to the formulation of the appropriate method of investigation The book is divided into two parts The first deals with examination of the products of conception after termination of pregnancy for fetal anomaly The range of pathological abnormality is described and its relevance discussed Attention is drawn to the differences in pathological findings in specific conditions between the second and third trimester The second part of the book is system orientated and describes and illustrates those pathological problems which are likely to be encountered in the fetus and neonate Each chapter is introduced by a concise account of the development of that system Where relevant there is also discussion of changes at birth as well as changes in normal function that may occur during the neonatal period Fetal and Neonatal Pathology is primarily written for the morbid anatomist and histopathologist It also provides a valuable source of reference for obstetricians neonatologists and paediatricians Its value as a working tool of reference is enhanced by effective cross referencing between sections by both chapter and page number 1 **Things I Didn't Expect (when I was expecting)** Monica Dux,2013-03-01 Pregnancy is natural healthy and fun right Sure it is if you re lucky For others it s an adventure in physical discomfort unachievable ideals kooky classes and meddling experts When Monica Dux found herself pregnant with her first child she was dismayed to find she belonged firmly in the second category For her pregnancy could only be described as a medium level catastrophe So three years later and about to birth her second child Monica went on a quest to figure out what s really going on when we incubate Monica explores the aspects of baby making that we all want to talk about but which are too embarrassing unsettling or downright confronting She also looks at the powerful forces that shape women s experiences of being pregnant in the west the exploitative industries and the medical and physical realities behind it all Along the way she fends off sadistic maternal health nurses attempts to expand then contract her vagina and struggles to keep her baby s placenta off her hippy brother s lunch menu *Calcium and Calcium Binding Proteins* Charles Gerday,L. Bolis,R. Gilles,2012-12-06 The idea of Professors Bolis and Gilles to gather together for a 3 days meeting in the splendid environment of Crans Montana in Switzerland a limited number of people around the subject of calcium and calcium binding proteins seemed at first particularly attractive and when they asked me to take charge of the scientific organization of the symposium I accepted with enthusiasm It rapidly became clear that the major problem would be the selection of the topics since it was impossible to cover completely and in depth such a broad and dynamic area of research In our view one imperative was to associate as intimately as possible the structural and the functional aspects of the areas covered Apart from one whole day focused on the fascinating roles played by calmodulin in cellular activities the other sessions were

devoted to calmodulin related calcium binding proteins in muscle and non muscle tissues and to some selected biological systems such as mitochondria secretory cells or sarcoplasmic reticulum in which calcium also plays a crucial role The presentations were made by leading investigators in their field Some of them do not however appear in the present volume for which there are two reasons first some of the contributions were somewhat outside the scope of the book second three speakers for valid reasons simply found no opportunity to write a manuscript in the allotted time

animals as human surrogates is not only unethical it is bad science Alix Fano provides a meticulous analysis of the technical and scientific problems that have plagued animal tests for decades but which have not been forcefully challenged until now She shows how animal testing has been used as an alibi to allow the continued use of thousands of toxic chemicals In a field dominated by male voices this is a pioneering work by a woman that effectively demonstrates the causal link between animal testing and environmental degradation and the subsequent deterioration of human health
