Library Systems Branch, 1975 **Grassland Simulation Model** G. S. Innis, 2012-12-06 Perspectives on the ELM Model and Modeling Efforts This volume is the major open literature description of a comprehensive pioneering ecological modeling effort The ELM model is one of the major outputs of the United States Grassland Biome study a contribution to the International Biological Program IBP Writing this introduction provides welcome personal opportunity to i review briefly the state of the art at the beginning of the ELM modeling effort in 1971 ii to discuss some aspects of the ELM model's role in relation to other models and other phases of the Grassland Biome study and iii to summarize the evolution of ELM or its components since 1973 Pre Program Historical Perspective My first major contacts with ecological simulation modeling were in 1960 when I was studying intraseasonal herbage dynamics and nutrient production on foothill grasslands in southcentral Montana making year round measurements of the aboveground live vegetation the standing dead and the litter Limitations in funding and the rockiness of the foothill soils prevented measuring the dynamics of the root biomass both live and dead Herbage biomass originates in live shoots from which it could be translocated into live roots or the live shoots could transfer to standing dead or to litter Standing dead vegetation must end up in the litter and the live roots eventually transfer to dead roots Obviously the litter and the dead roots must decay away **African Ecology** Clive Spinage, 2012-05-07 In view of the rapidly changing ecology of Africa this work provides benchmarks for some of the major and more neglected aspects with an accent on historical data to enable habitats to be seen in relation to their previous state forming a background reference work to understanding how the ecology of Africa has been shaped by its past Reviewing historical data wherever possible it adopts an holistic view treating man as well as animals with accent on diseases both human and animal which have been a potent force in shaping Africa's ecology a role neglected in ecological studies Antarctic Living Marine Resources, 1978 USDA Forest Service General Technical Report PNW., 1977 **Measuring Plant Diversity** Thomas J. Stohlgren, 2007 Here is a thorough presentation and critique of the sampling approaches designs and field techniques for measuring plant diversity Ecologists interested in assessing landscapes and ecosystems must measure biomass cover and the density or frequency of various key species Recently sampling designs for measuring species richness and diversity patterns of plant diversity species environment relationships and species distributions have become finer grained as it has become increasingly important to accurately map and assess rare species for conservation This book

lays out the range of current methods for mapping and measuring species diversity for field ecologists resource managers conservation biologists and students as a tool kit for future field measurements of plant diversity

Fritz, Ellen L. Simms, 2012-07-15 Far from being passive elements in the landscape plants have developed many sophisticated chemical and mechanical means of deterring organisms that seek to prey on them This volume draws together research from ecology evolution agronomy and plant pathology to produce an ecological genetics perspective on plant resistance in both natural and agricultural systems By emphasizing the ecological and evolutionary basis of resistance the book makes an important contribution to the study of how phytophages and plants coevolve Plant Resistance to Herbivores and Pathogens not only reviews the literature pertaining to plant resistance from a number of traditionally separate fields but also examines significant questions that will drive future research Among the topics explored are selection for resistance in plants and for virulence in phytophages methods for studying natural variation in plant resistance the factors that maintain intraspecific variation in resistance and the ecological consequences of within population genetic variation for herbivorous insects and fungal pathogens A comprehensive review of the theory and information on a large rapidly growing and important subject Douglas J Futuyma State University of New York Stony Brook
