Practical Introduction To Fibre And Tow Coloration:

A Practical Introduction to Fibre and Tow Coloration Geoffrey Clarke, 1982 *The Chemistry and Application of Dyes* David R. Waring, Geoffrey Hallas, 2013-11-11 It is particularly appropriate that a volume concerned with dye chemistry should be included in the series Topics in Applied Chemistry The development of the dye industry has been inexorably linked not only with the development of the chemical industry but also with organic chemistry itself since the middle of the last century The position of dye chemistry at the forefront of chemical 1945 and more markedly so during the last advance has declined somewhat since 15 years with pharmaceutical and medicinal chemistry assuming an increasingly prominent position Nevertheless dye production still accounts for a significant portion of the business of most major chemical companies The field of dye chemistry has stimulated the publication of many books over the years but surprisingly few have concentrated on or even included the practical aspects of dye synthesis and application Thus the present volume is designed to fulfill that need and provide the reader with an account of advances in dye chemistry concentrating on more recent work and giving in a single volume synthetic detail and methods of application of the most important classes information which will be invaluable to both student and research chemist alike **Handbook of Technical Textiles** A. Richard Horrocks, Subhash C.

and Other Keratin Fibres David M. Lewis, John A. Rippon, 2013-05-20 Keratin fibres particularly wool fibres constitute an important natural raw material in textiles due to their comfort and thermal properties. Wool coloration demands an understanding of the complex nature of the interplay between wool fibre chemistry, morphology and the coloration processes. The Coloration of Wool and other Keratin Fibres is a comprehensive treatment written by leading international experts of the chemistry and chemical processes involved in wool dyeing, printing, preparation and finishing. The book covers the chemical and physical structure of wool keratin fibres, detailing their complex heterogeneity and the subtle links between fibre structure and dyeability; the coloration of fabrics containing wool, including a variety of wool blends such as wool/silk, wool/polyester and wool/cotton; and luxury keratin fibres such as mohair, cashmere and camel. The chemistry of the various types of dyes utilised in wool dyeing and in depth discussions on the physical properties to optimise these processes. Practical application of dyes to wool in all its forms: loose stock, combed tops, yarns and piece goods is covered in the chapter on wool dyeing machinery. Two chapters, one on bleaching and whitening and one on dyeing human hair, provide a valuable extension to the topic of cosmetic chemistry. The Coloration of Wool and other Keratin Fibres is essential reading for professionals worldwide working in companies involved in the dyeing and printing of wool, wool blends and other keratin fibres, and also for the producers of dyes and auxiliary dyeing agents. It is a valuable resource for teachers and students of universities and technical institutes as well as for researchers who are focusing their investigations on wool, wool blends, human hair or dyes and auxiliaries.
