

RDF and the Relational Data Model

- Storing RDF in a relational DB
 - Need to persistently store and manipulate (large amounts of) RDF data
 - To use the relational database technology
 - Basically store the model as triples
 - A table for storing statements
 - Secondary tables storing literals, resources, and namespaces
 - Options
 - Multiple models support
 - Use of a hash to generate the identifiers for the resources

Practical Rdf:

Practical RDF Shelley Powers, 2003-07-18 The Resource Description Framework RDF is a structure for describing and interchanging metadata on the Web anything from library catalogs and worldwide directories to bioinformatics Mozilla internal data structures and knowledge bases for artificial intelligence projects RDF provides a consistent framework and syntax for describing and querying data making it possible to share website descriptions more easily RDF's capabilities however have long been shrouded by its reputation for complexity and a difficult family of specifications Practical RDF breaks through this reputation with immediate and solvable problems to help you understand master and implement RDF solutions Practical RDF explains RDF from the ground up providing real world examples and descriptions of how the technology is being used in applications like Mozilla FOAF and Chandler as well as infrastructure you can use to build your own applications This book cuts to the heart of the W3C's often obscure specifications giving you tools to apply RDF successfully in your own projects The first part of the book focuses on the RDF specifications After an introduction to RDF the book covers the RDF specification documents themselves including RDF Semantics and Concepts and Abstract Model specifications RDF constructs and the RDF Schema The second section focuses on programming language support and the tools and utilities that allow developers to review edit parse store and manipulate RDF XML Subsequent sections focus on RDF's data roots programming and framework support and practical implementation and use of RDF and RDF XML If you want to know how to apply RDF to information processing Practical RDF is for you Whether your interests lie in large scale information aggregation and analysis or in smaller scale projects like weblog syndication this book will provide you with a solid foundation for working with RDF

Reasoning Web: Logical Foundation of Knowledge Graph Construction and Query Answering Jeff Z. Pan, Diego Calvanese, Thomas Eiter, Ian Horrocks, Michael Kifer, Fangzhen Lin, Yuting Zhao, 2017-02-28 This volume contains some lecture notes of the 12th Reasoning Web Summer School RW 2016 held in Aberdeen UK in September 2016 In 2016 the theme of the school was Logical Foundation of Knowledge Graph Construction and Query Answering The notion of knowledge graph has become popular since Google started to use it to improve its search engine in 2012 Inspired by the success of Google knowledge graphs are gaining momentum in the World Wide Web arena Recent years have witnessed increasing industrial take ups by other Internet giants including Facebook's Open Graph and Microsoft's Satori The aim of the lecture note is to provide a logical foundation for constructing and querying knowledge graphs Our journey starts from the introduction of Knowledge Graph as well as its history and the construction of knowledge graphs by considering both explicit and implicit author intentions The book will then cover various topics including how to revise and reuse ontologies schema of knowledge graphs in a safe way how to combine navigational queries with basic pattern matching queries for knowledge graph how to setup an environment to do experiments on knowledge graphs how to deal with inconsistencies and fuzziness in ontologies and knowledge graphs and how to combine machine learning and machine

reasoning for knowledge graphs **Semantic Search over the Web** Roberto De Virgilio, Francesco Guerra, Yannis Velegrakis, 2012-08-04 The Web has become the world's largest database with search being the main tool that allows organizations and individuals to exploit its huge amount of information. Search on the Web has been traditionally based on textual and structural similarities, ignoring to a large degree the semantic dimension, i.e. understanding the meaning of the query and of the document content. Combining search and semantics gives birth to the idea of semantic search. Traditional search engines have already advertised some semantic dimensions. Some of them, for instance, can enhance their generated result sets with documents that are semantically related to the query terms even though they may not include these terms. Nevertheless, the exploitation of the semantic search has not yet reached its full potential. In this book, Roberto De Virgilio, Francesco Guerra, and Yannis Velegrakis present an extensive overview of the work done in Semantic Search and other related areas. They explore different technologies and solutions in depth, making their collection a valuable and stimulating reading for both academic and industrial researchers. The book is divided into three parts. The first introduces the readers to the basic notions of the Web of Data. It describes the different kinds of data that exist, their topology, and their storing and indexing techniques. The second part is dedicated to Web Search. It presents different types of search, like the exploratory or the path-oriented, alongside methods for their efficient and effective implementation. Other related topics included in this part are the use of uncertainty in query answering, the exploitation of ontologies, and the use of semantics in mashup design and operation. The focus of the third part is on linked data and more specifically on applying ideas originating in recommender systems on linked data management and on techniques for the efficient querying/answering on linked data. [Database Systems for Advanced Applications](#) Hiroyuki Kitagawa, Yoshiharu Ishikawa, Wenjie Li, Chiemi Watanabe, 2010-04-07 This two-volume set LNCS 5981 and LNCS 5982 constitutes the refereed proceedings of the 15th International Conference on Database Systems for Advanced Applications DASFAA 2010 held in Tsukuba, Japan, in April 2010. The 39 revised full papers and 16 revised short papers presented together with 3 invited keynote papers, 22 demonstration papers, 6 industrial papers, and 2 keynote talks were carefully reviewed and selected from 285 submissions. The papers of the first volume are organized in topical sections on P2P-based technologies, data mining technologies, XML search and matching, graphs, spatial databases, XML technologies, time series and streams, advanced data mining, query processing, Web sensor networks, and communications, information management, as well as communities and Web graphs. The second volume contains contributions related to trajectories and moving objects, skyline queries, privacy and security, data streams, similarity search, and event processing, storage, and advanced topics, industrial demo papers, and tutorials and panels. [Programming the Semantic Web](#) Toby Segaran, Colin Evans, Jamie Taylor, 2009-07-09 With this book, the promise of the Semantic Web, in which machines can find, share, and combine data on the Web, is not just a technical possibility but a practical reality. Programming the Semantic Web demonstrates several ways to implement semantic web applications using current and emerging standards and

technologies You ll learn how to incorporate existing data sources into semantically aware applications and publish rich semantic data Each chapter walks you through a single piece of semantic technology and explains how you can use it to solve real problems Whether you re writing a simple mashup or maintaining a high performance enterprise solution Programming the Semantic Web provides a standard flexible approach for integrating and future proofing systems and data This book will help you Learn how the Semantic Web allows new and unexpected uses of data to emerge Understand how semantic technologies promote data portability with a simple abstract model for knowledge representation Become familiar with semantic standards such as the Resource Description Framework RDF and the Web Ontology Language OWL Make use of semantic programming techniques to both enrich and simplify current web applications *Data Management in Cloud, Grid and P2P Systems* Abdelkader Hameurlain,Wenny Rahayu,David Taniar,2013-08-21 This book constitutes the refereed proceedings of the 6th International Conference on Data Management in Grid and Peer to Peer Systems Globe 2013 held in Prague Czech Republic in August 2013 in conjunction with DEXA 2013 The 10 revised full papers presented were carefully reviewed and selected from 19 submissions The papers are organized in the following topical sections data partitioning and consistency RDF data publishing querying linked data and applications and distributed storage systems and virtualization

Visualizing the Semantic Web Vladimir Geroimenko,Chaomei Chen,2006-07-01 The Semantic Web is a vision that has sparked a wide ranging enthusiasm for a new generation of the Web The Semantic Web is happening The central idea of that vision is to make the Web more understandable to computer programs so that people can make more use of this gigantic asset The use of metadata data about data can clearly indicate the meaning of data on the Web so as to provide computers enough information to handle such data On the future Web many additional layers will be required if we want computer programs to handle the semantics the meaning of data properly without human tervention Such layers should deal with the hierarchical relationships between me ings their similarities and differences logical rules for making new inferences from the existing data and metadata and so on Dozens of new technologies have emerged recently to implement these ideas XML eXtensible Markup Language forms the foundation of the future Web RDF Resource Description Framework OWL Web Ontology Language and many other technologies help to erect a multistory bui ing of the Semantic Web layer by layer by adding new features and new types of metadata According to Tim Berners Lee the inventor of the current Web and the Semantic Web it may take up to ten years to complete the building The new Web will be much more complex than the current one and will contain enormous amounts of metadata as well as data Trust Management III Elena Ferrari,Ninghui Li,Elisa Bertino,Yücel Karabulut,2009-07-10 This book constitutes the refereed proceedings of the Third IFIP WG 11 11 International Conference IFIPTM 2009 held in West Lafayette IN USA in June 2009 The 17 revised full papers presented together with one invited paper and 5 demo descriptions were carefully reviewed and selected from 44 submissions The papers are organized in topical sections on social aspects and usability trust reasoning and processing data security enhancements to subjective
