Practical Pharmaceutical Laboratory Automation:

Practical Pharmaceutical Laboratory Automation Brian D. Bissett, 2003-05-23 Laboratory automation is an increasingly important part of the job description of many laboratory scientists. Although many laboratory scientists understand the methods and principles involved in automation, most lack the necessary engineering and programming skills needed to successfully automate or interface equipment in the lab. A step by step how to reference and guide *Practical Pharmaceutical Laboratory Automation* explores the processes needed to automate the majority of tasks required in research today. The author discusses topics ranging from automated mathematical analysis to robotic automation of chemical processes to combinations of these and other processes. He presents a detailed discussion of high throughput screening and assay development and takes an in depth look at Visual Basic as the primary programming language used in laboratories. The text has a dedicated web site <http://www.pharmalabauto.com> that contains all the sample code and examples contained within the text as well as other information related to laboratory automation. Providing a starting point for tackling automation problems, *Practical Pharmaceutical Laboratory Automation* helps you develop a strategy for automation that gets consistent results.

A step by step *Integrated Strategies for Drug Discovery Using Mass Spectrometry* Mike S. Lee, 2005-09-02 New strategies and techniques for today's fast paced discovery process. Today the pressure is on for high throughput approaches to accelerate the generation, identification and optimization of molecules with desirable drug properties. As traditional methods of analysis become antiquated, new analytical strategies and techniques are necessary to meet sample throughput requirements and manpower constraints. Among them, mass spectrometry has grown to be a front line tool throughout drug discovery. *Integrated Strategies for Drug Discovery Using Mass Spectrometry* provides a thorough review of current analytical approaches, industry practices and strategies in drug discovery. The topics represent current industry benchmarks in specific drug discovery activities that deal with proteomics, biomarker discovery, metabolomic approaches for toxicity screening, lead identification, compound libraries, quantitative bioanalytical support, biotransformation, reactive metabolite characterization, lead optimization, pharmaceutical property profiling, sample preparation strategies and automation. THIS BOOK Clearly explains how drug discovery and mass spectrometry are interconnected. Discusses the uses and limitations of various types of mass spectrometry in various aspects of drug discovery. Prominently features analytical applications that require trace mixture analysis. Provides industry applications and real world examples. Shares historical background information on various techniques to aid in the understanding of how and why new methods are now being employed to analyze samples. *Automated Data Analysis Using*
