Sako,2012-10-02 Japan is regarded as a world leader in the field of education and training for improved economic performance Yet success in Japan is often achieved by going against what is regarded as ideal practice elsewhere This book offers the most comprehensive review available in English of the many facets of Japanese vocational education and training Covering the system from primary education through to in job training offered by companies this book provides a detailed study of current practice giving equal emphasis to formal training in explicitly vocational courses and informal training in factories shops and offices The authors analyse the difference between substantive person changing training and mere ability labelling They raise important questions such as To what extent does the need to package skills to provide convenient qualifications distort the actual training given How efficient is it to rely on professional trainers to certify the acquisition of skills rather than run separate testing systems The authors reveal how in Japanese companies employees are strongly motivated by pride in the successful execution of their jobs and that much company training is carried out by colleagues

Education and Training in Japan Thomas P. Rohlen,Christopher Bjork,1998 This collection written by Japanese and foreign scholars represents an inclusive cross section of the most important work in key areas of this field Topics include the impact of Japanese education and training on Japan s economy and culture the Japanese influence on the East Asian approach to education in comparison with the educational systems of Korea Taiwan Singapore and Hong Kong Japan s promotion of learning organizations and Knowledge workers for the Information Age **Tech Prep Associate Degree**

Complex Flows in Industrial Processes Antonio Fasano,2012-12-06 Despite the fact that fluid dynamics and filtration through porous media and mathematics there are classical research areas in engineering physics are still many industrial processes that require the study of new mathematical models for flows of particular complexity due to the peculiar properties of the systems involved The aim of this book is to provide a number of examples showing how frequently such situations arise in various branches of industrial technology The selection of the subjects was motivated not only by their industrial relevance and mathematical interest What I had in mind was a collection of problems having a really distinctive character thus bringing some fresh air into one of the oldest and most revered domains of applied mathematics The

incredible richness of nonstandard flow problems in industrial applications has always been and still is a constant surprise to me Therefore I tried to offer a very large spectrum of subjects with special attention devoted to those problems in which the modeling phase is far from being obvious and the mathematical content is absolutely nontrivial With such a view to diversity topics have been selected from a variety of sources such as glass industry polymers science coffee brewing fuels pipelining and contributors from different backgrounds mathematics physics chemical engineering have been included Consequently the mathematical nature of the problems formulated spans over a large range so that their theoretical investigation and numerical computation require a variety of different techniques
