

typical approaches that have contributed over the years in different ways to understanding the meaningful use of language. These include the now classic works on speech act theory, implicatures and presupposition, and more recent views on cognitive processes, conversational analysis, interactional perspectives, and discourse analysis.

We have adopted a linguistic orientation over a more functional or sociological perspective, excluding important traditions such as radical pragmatics leadered by Fairclough, functional linguistics by Halliday or text analysis by Teun van Dijk. Bearing in mind that our audience are non-specialists, we have opted for the classical pragmatic tradition which we have considered prior and basic to some of the research questions currently being asked. Secondly, the criteria for selecting the entries were also crucial. These were considerations of format and substance. Since the length of this bibliography is determined by the editorial policy of the journal, we decided to limit the commented entries to a minimum of three and a maximum of five in each section; otherwise we would have succeeded in filling the entire issue of *Links & Leeson*. An attempt has been made to balance the most representative works in each of the sections with publications that illustrate the kind of research that is currently being done in each one of the domains. A third choice which had to be made was which research traditions (i.e., Functionalists tradition, British, French) to include or exclude. The decision to focus on the North American and some areas within the British traditions in Pragmatics is clearly not representative of all the different kinds of Pragmatics research being undertaken in the world. It is justified by our editorial policy of publishing on *English Studies* and for an English language readership.

1. General Handbooks on Pragmatics

Levinson, Stephen (1983). *Pragmatics*. Cambridge: Cambridge University Press. 420 p.+ vi.

Mey, Jacob (1993). *Pragmatics: An introduction*. Oxford: Basil Blackwell. 357 p.+ xii.

Leech, Geoffrey (1983). *Principles of Pragmatics*. London: Longman. 250 p.+ xiii.

These three books, given their titles, could be expected to be quite similar in the subject matter they cover. Nonetheless, they are radically different not so much in content as in scope. They share the covering of certain topics within the wide field of pragmatics: (conversational) implicature, speech acts and performatives, conversational analysis and presupposition, that is, the most traditional areas.

Levinson's book is a classic in the field; it presents an integrative analysis of the central topics in pragmatics: deixis (to which he devotes a whole chapter, with useful information), implicature, presupposition, speech acts and conversational analysis. His aim is to provide an introduction to the topics that for historical reasons are central to the Anglo-American Pragmatics
