**VLSI Memory Chip Design** Kiyoo Itoh,2013-04-17 The VLSI memory era truly began when the first production of semiconductor memory was announced by IBM and Intel in 1970 The announcement had a profound impact on my research at Hitachi Ltd and I was forced to change fields from magnetic thin film to semiconductor memory This change was so exceptionally sudden and difficult I felt like a victim of fate Looking back however I realize how fortunate I was I have witnessed an unprecedented increase in memory capacity DRAM for example has had a 6 order increase in the last three decades from the 1 Kb level in 1970 to the 1 Gb level today I have contributed to this progress with full involvement in memory chip development over my career Such rapid progress would have been impossible without many of the inventions and innovative technologies and without the effort of many talented people Unfortunately few systematic books on memory chip design have been written by experts This is a result of two factors the difficulty of involving university professors because of rapidly changing technology requiring huge investments and development resources and a shortage of time on the part of chip designers in industry due to severe competition in the memory chip business Therefore LSI memory chip design has been isolated from the outside preventing a deeper understanding of the technology This book is based on my 30 year memory chip particularly DRAM design career

*Minuteman* David K. Stumpf,2021-02-26 In *Minuteman A Technical History of the Missile That Defined American Nuclear Warfare* David K Stumpf demystifies the intercontinental ballistic missile program that was conceived at the end of the Eisenhower administration as a key component of the US nuclear strategy of massive retaliation Although its nuclear warhead may have lacked power relative to that of the Titan II the Minuteman more than made up for this in terms of numbers and readiness to launch making it the ultimate ICBM Minuteman offers a fascinating look at the technological breakthroughs necessary to field this weapon system that has served as a powerful component of the strategic nuclear triad for more than half a century With exacting detail Stumpf examines the construction of launch and launch control facilities innovations in solid propellant lightweight inertial guidance systems and lightweight reentry vehicle development and key flight tests and operational flight programs all while situating the Minuteman program in the context of world events In doing so the author reveals how the historic missile has adapted to changing defense strategies from counterforce to mutually assured destruction to sufficiency

**The Service of Security and Information** Arthur Lockwood Wagner,1903 This book lays claim to no other merit than that of being an earnest attempt to meet the demand often expressed for an American text book on the subjects herein discussed Many of the features of the service of security and

information are common to both hemispheres and to all armed forces whether savage hordes or highly organized armies Other details of the same science vary with the topography the organization of the army national characteristics and the nature of the enemy encountered It follows therefore that a text book on this subject might be admirably adapted to the requirements of European officers and at the same time be in some respects quite unsuited to our needs From preface to the first edition     *The Higher Criticism of the Hexateuch* Charles A.
