The South Atlantic Alan Nairn, 2013-06-29 Everyone working in a problem as complex as continental drift must at some

time have felt the need for an objective data summary in fields other than his own. It is a scientific dilemma that although there is evident need for researchers with competence in many fields, the classical natural scientist the time involved in acquiring such broad experience is so great as to render the task largely impossible. The alternative seems to be the team approach and we have espoused it in this volume. Editors and contributors alike have tried in this book to keep the accent upon factual information and to reduce interpretation to a minimum. Interpretation there must be however, since without it science is but an intellectual pastime comparable to philately. The librarians' need to classify results in the appearance of our names upon the spine of this volume however we would like to make it clear that the book has been a truly cooperative effort and could not have succeeded but for the active help of the individual contributors whose assistance seldom was restricted to their chapters. Special thanks must be given to our South American colleagues for the tolerance with which they viewed our editorial attempts and to Dr E. Machens for his careful review of the translation of his manuscript. We wish also to acknowledge the help of Dr C. W.

Surveys the tectonic evolution of the Antarctic crust and the palaeoenvironmental evolution of Antarctica since the Late Mesozoic     Evolutionary Biology of the New World Monkeys and Continental Drift Russell L. Ciochon, 2013-12-01

It is now well known that the concept of drifting continents became an established theory during the 1960s. Not long after this revolution in the earth sciences, researchers began applying the continental drift model to problems in historical biogeography. One such problem was the origin and dispersal of the New World monkeys, the Platyrrhini. Our interests in this subject began in the late 1960s on different continents quite independent of one another in the cities of Florence, Italy and Berkeley, California. In Florence in 1968, A. B. Chiarelli, through stimulating discussions with R. von Koenigswald and B. de Boer, became intrigued with the possibility that a repositioning of the continents of Africa and South America in the early Cenozoic might alter previous traditional conceptions of a North American origin of the Platyrrhini. During the early 1970s, this concept was expanded and pursued by him through discussions with students while serving as visiting professor at the University of Toronto. By this time, publication of the *Journal of Human Evolution* was well underway and Dr Chiarelli as editor encouraged a dialogue emphasizing continental drift models of primate origins which culminated in a series of articles published in that journal during 1974-75. In early 1970, while attending the University of California at Berkeley, R. L. Ciochon was introduced to the concept of continental drift and plate tectonics and their concomitant applications to vertebrate evolution through talks with paleontologist W. A. Clemens and anthropologist S. L. Washburn.
