Modeling Economic Management And Policy Issues Of Water In Irrigated Agriculture:

Modeling Economic Management and Policy Issues of Water in Irrigated Agriculture Ariel Dinar, John Letey, 1996-08-23 This work presents models that characterize the relationships between quantity and quality of irrigation water application and agricultural production and the environment A comprehensive modeling approach addressing both the benefits of irrigation and the potential negative effects is introduced Physical biological concepts are combined with economic and engineering principles to demonstrate the usefulness of the model for analyzing various water management and policy issues Decision makers on all levels should find the modeling approach interesting and useful in the management issues from the farm to national levels *Modeling Water Resources Management at the Basin Level* Daene C. McKinney, International Water Management Institute, 1999 The world is facing severe and growing challenges in maintaining water quality and meeting the rapidly growing demand for water resources In addition water used for irrigation the largest use of water in most developing countries will likely have to be diverted increasingly to meet the needs of urban areas and industry whilst remaining a prime engine of agricultural growth Finally environmental and other in stream water demands become more important as economies develop The river basin has been acknowledged to be the appropriate unit of analysis to address these challenges facing water resources management and modeling at this scale can provide essential information for policy makers in their decisions on allocation of resources This paper reviews the state of the art of modeling approaches to integrated water resources management at the river basin scale with particular focus on the potential of coupled economic hydrologic models and concludes with directions for future modeling exercises *Irrigation Water Pricing* François Molle, Jeremy Berkoff, 2007-01-01 Much hope has been vested in pricing as a means of helping to regulate and rationalize water management notably in the irrigation sector The pricing of water has often been applied universally using general and ideological policies and not considering regional environmental and economic differences Almost 15 years after the emphasis laid at the Dublin and Rio conferences on treating water as an economic good a comprehensive review of how such policies have helped manage water resources an irrigation use is necessary The case studies presented here offer a reassessment of current policies by evaluating their objectives and constraints and often demonstrating their failure by not considering the regional context They will therefore contribute to avoiding costly and misplaced reforms and help design water policies that are based on a deeper understanding of the factors which eventually dictate their effectiveness

Handbook of Water Economics Ariel Dinar, Kurt Schwabe, 2015-09-25 Water scarcity whether in the quality or quantity dimension afflicts most countries Decisions on water management and allocation over time space and among uses and users involve economic considerations This Handbook assembles research that represents recent thinking and applications in water economics The book chapters are written by leading scholars in the field who address issues related to its use management and value The topics cover analytical methods sectoral and intersectoral water issues and issues associated

with different sources of water Integrated Water Resources Management ,2005 30 **Pricing Irrigation Water**

Yacov Tsur,2010-09-30 As globalization links economies the value of a country s irrigation water becomes increasingly sensitive to competitive forces in world markets Water policy at the national and regional levels will need to accommodate these forces or water is likely to become undervalued The inefficient use of this resource will lessen a country s comparative advantage in world markets and slow its transition to higher incomes particularly in rural households While professionals widely agree on what constitutes sound water resource management they have not yet reached a consensus on the best ways of implementing policies Policymakers have considered pricing water a debated intervention in many variations Setting the price right some say may guide different types of users in efficient water use by sending a signal about the value of this resource Aside from efficiency itself an important policy objective equity accessibility and implementation costs associated with the right pricing must be considered Focusing on the examples of China Mexico Morocco South Africa and Turkey Pricing Irrigation Water provides a clear methodology for studying farm level demand for irrigation water This book is the first to link the macroeconomics of policies affecting trade to the microeconomics of water demand for irrigation and in the case of Morocco to link these forces to the creation of a water user rights market This type of market reform the contributors argue will result in growing economic benefits to both rural and urban households Integrated Water Resources Management Miguel A. Mariño,Slobodan P. Simonović,2001 **Water Resources Management IV** C.A. Brebbia,A. Kungolos,2007-05-08 Water resources are under extreme pressure today all over the world The resulting problems have given rise to many activities which reflect the growing concern about them and the importance of effective management As water increasingly becomes a precious resource on which the well being of future generations depends it is essential to discuss issues concerning quality quantity planning and other related topics Containing papers presented at the Fourth International Conference on Water Resources Management this book examines the recent technological and scientific developments associated with the management of surface and sub surface water resources The wide variety of subjects covered are as follows Water Resource Management and Planning Waste Water Treatment and Management Water Markets and Policies Urban Water Management Water Quality Storm Water Management Water Security Systems Pollution Control Irrigation Problems Reservoirs and Lakes River Basin Management Hydrological Modelling Flood Risk Decision Support Systems Groundwater Flow Problems and Remediation Technologies Coastal and Estuarial Problems Soil and Water Conservation and Risk Analysis Integrated Water-resources Management in a River-basin Context ,2002 The main objective of the 5 day workshop was to present and discuss research being conducted by IWMI and IFPRI in selected river basins in the Asian region with financial support from the ADB through its regional technical assistance mechanism RETA The studies conducted by the two centers share some common goals and encompass work plans and methodologies that are highly complementary and mutually supportive *Determining the Economic Value of Water* Robert A. Young,John B.

Loomis, 2014-07-23 Water provides benefits as a commodity for agriculture industry and households and as a public good such as fisheries habitat water quality and recreational use To aid in cost benefit analysis under conditions where market determined price signals are usually unavailable economists have developed a range of alternative valuation methods for measuring economic benefits This volume provides the most comprehensive exposition to date of the application of economic valuation methods to proposed water resources investments and policies It provides a conceptual framework for valuation of both commodity and public good uses of water addressing non market valuation techniques appropriate to measuring public benefits including water quality improvement recreation and fish habitat enhancement The book describes the various measurement methods illustrates how they are applied in practice and discusses their strengths limitations and appropriate roles In this second edition all chapters have been thoroughly updated and in particular the coverage of water markets and valuation of ecosystem services from water has been expanded Robert Young author of the 2005 edition has been joined for this new edition by John Loomis who brings additional expertise on ecosystem services and the environmental economics of water for recreational and other public good uses of water
