Modeling HIV Transmission and AIDS in the United States Herbert W Hethcote, James W Van Ark, 2014-01-15

Modeling HIV Transmission and AIDS in the United States Herbert W. Hethcote, James W. Van Ark, 2013-03-09 The disease that came to be called acquired immunodeficiency syndrome AIDS was first identified in the summer of 1981 By that time nearly 100 000 persons in the United States may have been infected with human immunodeficiency virus HIV By the time the routes of transmission were clearly identified and HIV was established as the cause of AIDS in 1983 over 300 000 people may have been infected That number has continued to increase with approximately 1 000 000 Americans believed to be infected in 1991 The epidemic is of great public health concern because HIV is infectious causes severe morbidity and death in most if not all of those infected and often occurs in relatively young persons In addition the cost of medical care for a person with HIV disease is high and the medical care needs of HIV infected persons place a severe burden on the medical care systems in many areas Understanding and controlling the HIV epidemic is a particularly difficult challenge The long and variable period between HIV infection and clinical disease makes it difficult both to forecast the future magnitude of the epidemic which is important for health care planning and to estimate the number infected in the last several years which is important for monitoring the current status of the epidemic

Stochastic Models With Applications To Genetics, Cancers, Aids And Other Biomedical Systems Wai-yuan

Tan, 2002-02-26 This book presents a systematic treatment of Markov chains diffusion processes and state space models as well as alternative approaches to Markov chains through stochastic difference equations and stochastic differential equations It illustrates how these processes and approaches are applied to many problems in genetics carcinogenesis AIDS epidemiology and other biomedical systems One feature of the book is that it describes the basic MCMC Markov chain and Monte Carlo procedures and illustrates how to use the Gibbs sampling method and the multilevel Gibbs sampling method to solve many problems in genetics carcinogenesis AIDS and other biomedical systems As another feature the book develops many state space models for many genetic problems carcinogenesis AIDS epidemiology and HIV pathogenesis It shows in detail how to use the multilevel Gibbs sampling method to estimate or predict simultaneously the state variables and the unknown parameters in cancer chemotherapy carcinogenesis AIDS epidemiology and HIV pathogenesis As a matter of fact this book is the first to develop many state space models for many genetic problems carcinogenesis and other biomedical problems

Stochastic Models With Applications To Genetics, Cancers, Aids And Other Biomedical Systems (Second Edition) Wai-yuan Tan, 2015-10-28 This book presents a systematic treatment of Markov chains diffusion processes and state space models as well as alternative approaches to Markov chains through stochastic difference equations and stochastic differential equations It illustrates how these processes and approaches are applied to many problems in genetics carcinogenesis AIDS epidemiology and other biomedical systems One feature of the book is that it describes the basic MCMC

Markov chain and Monte Carlo procedures and illustrates how to use the Gibbs sampling method and the multilevel Gibbs sampling method to solve many problems in genetics carcinogenesis AIDS and other biomedical systems As another feature the book develops many state space models for many genetic problems carcinogenesis AIDS epidemiology and HIV pathogenesis It shows in detail how to use the multilevel Gibbs sampling method to estimate or predict simultaneously the state variables and the unknown parameters in cancer chemotherapy carcinogenesis AIDS epidemiology and HIV pathogenesis As a matter of fact this book is the first to develop several state space models for many genetic problems carcinogenesis and other biomedical problems To emphasize special applications to medical problems in this new edition the book has added a new chapter to illustrate how to develop biologically supported stochastic models and state space models of carcinogenesis in human beings Specific examples include hidden Markov models and state space models for human colon cancer human liver cancer and some human pediatric cancers such as retinoblastoma and hepatoblastoma The book also gives examples to illustrate how to develop procedures to assess cancer risk of environmental agents through initiation promotion protocols

Mathematical Understanding of Infectious Disease Dynamics Stefan Ma, 2009 The Institute for Mathematical Sciences at the National University of Singapore hosted a research program on Mathematical Modeling of Infectious Diseases Dynamics and Control from 15 August to 9 October 2005 As part of the program tutorials for graduate students and junior researchers were given by leading experts in the field

Mathematical Models in Epidemiology Fred Brauer, Carlos Castillo-Chavez, Zhilan Feng, 2019-10-10 The book is a comprehensive self contained introduction to the mathematical modeling and analysis of disease transmission models It includes i an introduction to the main concepts of compartmental models including models with heterogeneous mixing of individuals and models for vector transmitted diseases ii a detailed analysis of models for important specific diseases including tuberculosis HIV AIDS influenza Ebola virus disease malaria dengue fever and the Zika virus iii an introduction to more advanced mathematical topics including age structure spatial structure and mobility and iv some challenges and opportunities for the future There are exercises of varying degrees of difficulty and projects leading to new research directions For the benefit of public health professionals whose contact with mathematics may not be recent there is an appendix covering the necessary mathematical background There are indications which sections require a strong mathematical background so that the book can be useful for both mathematical modelers and public health professionals

Mathematical Models for Communicable Diseases Fred Brauer, Carlos Castillo-Chavez, 2013-02-07 A self contained and comprehensive guide to the mathematical modeling of disease transmission appropriate for graduate students

Models for Infectious Human Diseases Valerie Isham, Graham Medley, 1996-03-29 Infectious disease accounts for more death and disability globally than either non infectious disease or injury This book contains a breadth of different quantitative approaches to understanding the patterns of infectious diseases in populations and the design of control strategies to lessen their effect The contributors bring a great variety of

mathematical expertise including deterministic and stochastic modelling and statistical data analysis and involvement in a wide range of applied fields across the spectrum of biological medical and social sciences The aim is to increase interaction between specialities by describing research on many of the infectious diseases that affect humans including both viral diseases like measles and AIDS and tropical parasitic infections The papers are divided into groups dealing with problems relating to transmissible diseases vaccination strategies the consequences of treatment interventions the dynamics of immunity heterogeneity of populations and prediction
