Modelling of Concrete Performance Rajesh Chaube, Toshiharu Kishi, Koichi Maekawa, 2019-12-12 The initial defects induced at early age of concrete hardening thermal strains shrinkage creep and the associated risks of cracking are one of the governing factors for long term performance of concrete Proposing a simplified but integrated scenario of concrete life cycle simulation method this book examines and explains the vast amount of experimental observations related to hardening concrete using a common set of physical laws The methods used focus on the three primary processes common to the development of all cementitious materials hydration moisture transport and structure formation The authors describe an integrated theoretical and computational platform from which to examine and assess the quality and structural durability of concrete at an early age This represents a new approach to the problem of evaluating durability performance and presents a practical methodology for researchers and practitioners in the field of concrete technology The proposed scheme may be used in practical computational simulation methods with the relevant software available on the Internet and is a valuable guide to those engaged in concrete design

The Natural Radiation Environment VII J.P. McLaughlin, E.S. Simopoulos, F. Steinhäusler, 2005-03-30 The Natural Radiation Environment Symposium NRE VII the Seventh in the NRE series which commenced forty years ago in 1963 at Rice University Texas was held in Rhodes Greece in May 2002 During the intervening four decades the research work presented at these NRE Symposia has contributed to a deeper understanding of natural radiation and in particular of

its contribution to human radiation exposures It is clear from the quality and diversity of the 143 papers in this volume of Radioactivity in the Environment series that the study of the natural radiation environment is an active and continually expanding field of research The papers in this volume fall into a number of main and topical research areas namely the measurement and behaviour of natural radionuclides in the environment cosmic radiation measurement and dosimetry the external penetrating radiation field at ground level TENR Technologically Enhanced Natural Radiation and NORM Naturally Occurring Radioactive Materials studies assessment of the health effects of radon regulatory aspects of natural radiation exposures In these papers the results of many new surveys of natural radionuclide levels in the environment and of improved methods of detection are described While some of the natural radiation sources investigated are unmodified by human activity many accounts are given here of exposures to natural sources which have been enhanced by technology Such TENR and NORM exposures are shown to range from activities such as mining oil and gas exploitation the use of industrial by products as building materials to space travel to name but a few In several cases quite high doses to some individuals are shown to occur Accounts are given here of methods to prevent and reduce exposures to such sources
