Modelling Systems Practical Tools And Techniques In Software Development:

Modelling Systems John Fitzgerald, Peter Gorm Larsen, 2009-06-11 How can we make sure that the software we build does what it is supposed to This book provides an insight into established techniques which help developers to overcome the complexity of software development by constructing models of software systems in early design stages It uses one of the leading formal methods VDM Vienna Development Method and combines training in the formalism with industry strength tool support and examples derived from real industrial applications The principles taught here also apply to many of the current generation of formal methods This second edition has been updated to include advanced online tool support for formal modelling as well as up to date reports on real commercial applications in areas as diverse as business information systems and firmware design

The Practice of Formal Methods Ana Cavalcanti, James Baxter, 2024-09-03 This Festschrift dedicated to Cliff Jones contains papers written by many of his closest collaborators Cliff has an exceptional international standing for his groundbreaking research and leadership within the practice of formal methods his career encompasses significant contributions to academia industry policy and service Cliff is a Fellow of the Royal Academy of Engineering ACM BCS and IET and in 2015 he was the inaugural Fellow of the Formal Methods Europe association His career has included industry research in the UK Austria and Belgium a PhD at the University of Oxford and academic and research roles at the University of Cambridge and the University of Manchester and since 1999 at Newcastle University Throughout his career he has championed the essential role of formalism in design processes His collaboration at IBM in the 1970s led to the creation of the Vienna Development Method VDM a seminal contribution that has influenced both practical industry applications and theoretical advancements Cliff was the founding editor of the ACM journal Formal Aspects of Computing a founder of the Formal Methods symposium and he played a pivotal role in the IFIP Working Groups on Programming Methodology and Verified Software His policy advocacy has been instrumental in fostering public discourse on the reliability of computing systems The 30 contributions in this volume are a snapshot of the many current scientific developments inspired by or built upon Cliff's contributions

Generative and Transformational Techniques in Software Engineering II Ralf Lämmel, Joost Visser, João Saraiva, 2008-10-08 The second instance of the international summer school on Generative and Transformational Techniques in Software Engineering GTTSE 2007 was held in Braga Portugal during July 27 2007 This volume contains an augmented selection of the material presented at the school including full tutorials short tutorials and contributions to the participants workshop The GTTSE summer school series brings together PhD students lecturers technology presenters as well as other researchers and practitioners who are interested in the generation and the transformation of programs data models metamodels documentation and entire software systems This concerns many areas of software engineering software reverse and re engineering model driven engineering automated software engineering generic language technology to name a few These areas differ with regard to the specific sorts of metamodels or grammars

schemas formats etc that underlie the involved artifacts and with regard to the specific techniques that are employed for the generation and the transformation of the artifacts The first instance of the school was held in 2005 and its proceedings appeared as volume 4143 in the LNCS series

Software Architecture Flavio Oquendo, 2007-09-11 This book constitutes the refereed proceedings of the First European Conference on Software Architecture ECSA 2007 held in Aranjuez Spain The 12 revised long papers presented together with four short papers cover description languages and metamodels architecture based code generation run time monitoring requirements engineering service oriented architectures aspect oriented software architectures ontology based approaches autonomic systems middleware and web services

Applied Formal Methods - FM-Trends 98 Dieter Hutter, Werner Stephan, Paolo Traverso, Markus Ullmann, 2007-07-21 This volume contains the contributions presented at the International Workshop on Current Trends in Applied Formal Methods organized October 7-9 1998 in Boppard Germany The main objective of the workshop was to draw a map of the key issues facing the practical application of formal methods in industry This appears to be particularly timely with safety and security issues becoming a real obstacle to industrial software and hardware development As a consequence almost all major companies have now set up departments or groups to work with formal methods and many European countries face a severe labour shortage in this new field Tony Hoare's prediction of the art of software and hardware development becoming a proper engineering science with its own body of tools and techniques is now becoming a reality So the focus of this application oriented workshop was not so much on special academic topics but rather on the many practical aspects of this emerging new technology verification and validation and tool support and integration into the software life cycle By evaluating the state of the art with respect to industrial applications a discussion emerged among scientists practising engineers and members of regulatory and funding agencies about future needs and developments This discussion led to roadmaps with respect to the future of this field to tool support and potential application areas and promising market segments The contributions of the participants from industry as well as from the respective national security bureaus were particularly valuable and highly appreciated

FM 2005: Formal Methods John Fitzgerald, Ian J. Hayes, 2005-07-04 This volume contains the proceedings of Formal Methods 2005 the 13th International Symposium on Formal Methods held in Newcastle upon Tyne UK during July 18-22 2005 Formal Methods Europe FME www.fmeurope.org is an independent association which aims to stimulate the use of and research on formal methods for system development FME conferences began with a VDM Europe symposium in 1987 Since then the meetings have grown and have been held about once every 18 months Throughout the years the symposia have been notably successful in bringing together researchers tool developers vendors and users both from academia and from industry Formal Methods 2005 confirms this success We received 130 submissions to the main conference from all over the world Each submission was carefully refereed by at least three reviewers Then after an intensive in depth discussion the Program Committee selected 31 papers for presentation at the conference They form the bulk of this volume We would like to thank

all the Program Committee members and the referees for their excellent and efficient work Apart from the selected contributions the Committee invited three keynote lectures from Mathai Joseph Marie Claude Gaudel and Chris Johnson You will find the abstracts papers for their keynote lectures in this volume as well

An innovation for the FM2005 program was a panel discussion on the history of formal methods with Jean Raymond Abrial Dines Bjørner Jim Horning and Cli Jones as panelists Unfortunately it was not possible to reflect this event in the current volume but you will find the material documenting it elsewhere see the conference Web page

Software Verification and Analysis Janusz Laski, William Stanley, 2009-04-29 The situation is good but not hopeless Polish folk wisdom The text is devoted to the Software Analysis and Testing SAT methods and supporting tools for assessing and if possible improving software quality specifically its correctness The term quality assurance is avoided for it is this author's firm belief that in the current state of the art that goal is unattainable a plethora of guaranteed solutions to the problem notwithstanding Therefore the rather awkward phrase improving correctness is to be understood as an effort to minimize the number of residual programming faults bugs and their impact on the software's behavior that is to make the faults tolerable It is clear that such a minimalist approach is a result of frustration Indeed having spent years developing software and teaching preaching How to do it right I still do not know how to go about it with any degree of certainty It appears then I probably should stop right now for who with a modicum of common sense would reach for a text that does not offer salvation but as will be seen hard work and misery If I intend to continue it is only that I suspect there are many professionals out there who have similar doubts And they are the intended audience of this project The philosophical underpinning of the text is the importance of sound engineering practices in software development

Formal Methods and Hybrid Real-Time Systems Cliff B. Jones, Zhiming Liu, Jim Woodcock, 2007-09-04 This Festschrift volume is published to honour both Dines Bjørner and Zhou Chaochen on the occasion of their 70th birthdays The volume includes 25 refereed papers by leading researchers current and former colleagues who congregated at a celebratory symposium held in Macao China in the course of the International Colloquium on Theoretical Aspects of Computing ICTAC 2007 The papers cover a broad spectrum of subjects

Petri Nets and Other Models of Concurrency - ICATPN 2006 Susanna Donatelli, P.S. Thiagarajan, 2006-06-21 This book constitutes the refereed proceedings of the 27th International Conference on Applications and Theory of Petri Nets and Other Models of Concurrency ICATPN 2006 held in Turku Finland in June 2006 The book presents 16 revised full papers and 6 revised tool papers together with 4 invited papers All current issues on research and development in the area of Petri nets and modeling of concurrent systems are addressed

Perspectives on the Future of Software Engineering Jürgen Münch, Klaus Schmid, 2013-06-13 The dependence on quality software in all areas of life is what makes software engineering a key discipline for today's society Thus over the last few decades it has been increasingly recognized that it is particularly important to demonstrate the value of software engineering methods in real world environments a task which is the focus of empirical software engineering One

of the leading protagonists of this discipline worldwide is Prof Dr Dr h c Dieter Rombach who dedicated his entire career to empirical software engineering For his many important contributions to the field he has received numerous awards and recognitions including the U S National Science Foundation s Presidential Young Investigator Award and the Cross of the Order of Merit of the Federal Republic of Germany He is a Fellow of both the ACM and the IEEE Computer Society This book published in honor of his 60th birthday is dedicated to Dieter Rombach and his contributions to software engineering in general as well as to empirical software engineering in particular This book presents invited contributions from a number of the most internationally renowned software engineering researchers like Victor Basili Barry Boehm Manfred Broy Carlo Ghezzi Michael Jackson Leon Osterweil and of course by Dieter Rombach himself Several key experts from the Fraunhofer IESE the institute founded and led by Dieter Rombach also contributed to the book The contributions summarize some of the most important trends in software engineering today and outline a vision for the future of the field The book is structured into three main parts The first part focuses on the classical foundations of software engineering such as notations architecture and processes while the second addresses empirical software engineering in particular as the core field of Dieter Rombach s contributions Finally the third part discusses a broad vision for the future of software engineering
