

Models

- A representation of something that may be used in place of the real thing, abstracting away unimportant features but retaining the essential. (Cooper).
- A good model is complete (does not abstract out important properties) and faithful (does not introduce features that are not in the original) with respect to its specific purpose. Helpful for understanding a complex system – cognition for the case of cognitive science.
- Computational cognitive modelling is the development of computer models of cognitive processes and the use of such models to simulate and predict human behaviour.

Modelling Cognition:

Modelling Cognition Peter E. Morris, 1987-09-28 Presents major discussions of current issues in modelling human cognition along with examples of such models This book provides an overview of problems and advances in an area that has become increasingly important in recent years and which is attracting further interest as cognitive science becomes an established approach linking psychology philosophy artificial intelligence and linguistics Special attention is given to models that cope with novelty and the evidence of the value of computational models The essays were originally presented at the International Workshop on Modelling Cognition 1985 Contributors include many of the foremost international experts in the field

An Interdisciplinary Approach to Cognitive Modelling Partha Ghose, Sudip Patra, 2023-12-05 An Interdisciplinary Approach to Cognitive Modelling presents a new approach to cognition that challenges long held views It systematically develops a broad based framework to model cognition which is mathematically equivalent to the emerging quantum like modelling of the human mind The book argues that a satisfactory physical and philosophical basis of such an approach is missing a particular issue being the application of quantization to the mind for which there is no empirical evidence as yet In response to this issue the book adopts a COM classical optical modelling approach broad based but mathematically equivalent to quantum like modelling while avoiding its problematic features It presents a philosophically informed and empirically motivated mathematical model of cognition mainly concerning decision making processes It also deals with applications to different areas of the social sciences It will be of interest to scholars and research students interested in the mathematical modelling of cognition and decision making and also interdisciplinary researchers interested in broader issues of cognition

Modelling High-level Cognitive Processes Richard P. Cooper With Contributi, Peter G. Yule, John Fox, David W. Glasspool, Richard P. Cooper, 2013-05-13 This book is a practical guide to building computational models of high level cognitive processes and systems High level processes are those central cognitive processes involved in thinking reasoning planning and so on These processes appear to share representational and processing requirements and it is for this reason that they are considered together in this text The book is divided into three parts Part I considers foundational and background issues Part II provides a series of case studies spanning a range of cognitive domains Part III reflects upon issues raised by the case studies Teachers of cognitive modeling may use material from Part I to structure lectures and practical sessions with chapters in Part II forming the basis of in depth student projects All models discussed in this book are developed within the COGENT environments COGENT provides a graphical interface in which models may be sketched as box and arrow diagrams and is both a useful teaching tool and a productive research tool As such this book is designed to be of use to both students of cognitive modeling and active researchers For students the book provides essential background material plus an extensive set of example models exercises and project material Researchers of both symbolic and connectionist persuasions will find the book of interest for its approach to cognitive modeling which emphasizes

methodological issues They will also find that the COGENT environment itself has much to offer

Models and Cognition

Jonathan A. Waskan, 2012-01-13 A groundbreaking argument challenging the traditional linguistic representational model of cognition proposes that representational states should be conceptualized as the cognitive equivalent of scale models In this groundbreaking book Jonathan Waskan challenges cognitive science's dominant model of mental representation and proposes a novel well devised alternative The traditional view in the cognitive sciences uses a linguistic propositional model of mental representation This logic based model of cognition informs and constrains both the classical tradition of artificial intelligence and modeling in the connectionist tradition It falls short however when confronted by the frame problem the lack of a principled way to determine which features of a representation must be updated when new information becomes available Proposed alternatives including the imagistic model have not so far resolved this problem Waskan proposes instead the Intrinsic Cognitive Models ICM hypothesis which argues that representational states can be conceptualized as the cognitive equivalent of scale models Waskan argues further that the proposal that humans harbor and manipulate these cognitive counterparts to scale models offers the only viable explanation for what most clearly differentiates humans from other creatures their capacity to engage in truth preserving manipulation of representations

Goldstone, 2005 The Handbook of Cognition provides a definitive synthesis of the most up to date and advanced work in cognitive psychology in a single volume The editors have gathered together a team of world leading researchers in specialist areas of the field both traditional and hot new areas to present a benchmark in terms of theoretical insight and advances in methodology of the discipline This book contains a thorough overview of the most significant and current research in cognitive psychology that will serve this academic community like no other volume

Models of Visuospatial Cognition Manuel de Vega, 1996-05-23 This second volume in the Counterpoints Series which explores issues in psychology child development linguistics and neuroscience focuses on alternative models of visual spatial processing in human cognition This text offers extended chapters from three of the most respected and recognized investigators in the field Michel Denis Margaret Intons Peterson and Philip Johnson Laird Denis considers the role of mental imagery in spatial cognition and topographical orientation images are viewed as a form of mental representation that is similar to real world objects Intons Peterson examines spatial representation in short term or working memory considering the relationship of visual spatial processes to subjects expectations and individual differences Johnson Laird approaches the issue of visual spatial representation from a mental models perspective considering the relationship of images to various cognitive events The editors provide a historical and theoretical introduction and a final chapter integrates the arguments of the chapters offering ideas about new directions and new research designs

Quantum Models of Cognition and Decision Jerome R. Busemeyer, Peter D. Bruza, 2012-07-26 Much of our understanding of human thinking is based on probabilistic models This innovative book by Jerome R Busemeyer and Peter D Bruza argues that actually the underlying mathematical structures from

quantum theory provide a much better account of human thinking than traditional models They introduce the foundations for modeling probabilistic dynamic systems using two aspects of quantum theory The first contextuality is a way to understand interference effects found with inferences and decisions under conditions of uncertainty The second quantum entanglement allows cognitive phenomena to be modeled in non reductionist ways Employing these principles drawn from quantum theory allows us to view human cognition and decision in a totally new light Introducing the basic principles in an easy to follow way this book does not assume a physics background or a quantum brain and comes complete with a tutorial and fully worked out applications in important areas of cognition and decision **Cognition In Action** Alan F. Collins, Philip Levy, Peter E.

Morris, Mary M. Smyth, 1994-08-05 This revised textbook is designed for undergraduate courses in cognitive psychology It approaches cognitive psychology by asking what it says about how people carry out everyday activities how people organize and use their knowledge in order to behave appropriately in the world in which they live Each chapter of the book starts with an example and then uses this to introduce some aspect of the overall cognitive system Through such examples of cognition in action important components of the cognitive system are identified and their interrelationships highlighted Thus the text demonstrates that each part of the cognitive system can only be understood properly in its place in the functioning of the whole This edition features increased coverage of neuropsychological and connectionist approaches to cognition

Cognition in Action Mary M.
