Models And Economic Theory:

Models and Economic Theory Ivy Papps, Willie Henderson, 1977 *Some Quantitative Methods and Models in Economic Theory* Alexander V. Prasolov, 2016 Introduction Linear dynamic models Lotka Volterra's models in economics Various dynamic models **The Methodology of Economic Model Building (Routledge Revivals)** Lawrence A. Boland, 2014-05-01 The major methodological task for modern economists has been to establish the testability of models Too often however methodological assumptions can make a model virtually impossible to test even under ideal conditions yet few theorists have examined the requirements and problems of assuring testability in economics In *The Methodology of Economic Model Building* first published in 1989 Lawrence Boland presents the results of a research project that spanned more than twenty years He examines how economists have applied the philosophy of Karl Popper relating methodological debates about falsifiability to wider discussions about the truth status of models in natural and social sciences He concludes that model building in economics reflects more the methodological prescriptions of the economist Paul Samuelson than Popper's falsificationism This title will prove invaluable to both students and researchers and represents a substantial contribution to debates about the scientific status of economics *The General Economic Theory* Wei-Bin Zhang, 2020-08-27 This book develops a general economic theory that integrates various economic theories and ideas and establishes important relationships between economic variables that are not formally recognized in the economic literature The author demonstrates how the basic model is integrated with neoclassical growth theory Walrasian general equilibrium theory and Ricardian distribution theory and how these theories can be incorporated through a single set of equations with a microeconomic basis The book offers new insights into income and wealth distribution between heterogeneous households racial and national differences in growth and development interdependence between different stock variables with portfolio choices among different markets It will appeal to scholars of economists interested in an integrative theoretical approach to this discipline **Bayesian Models in Economic Theory** Marcel Boyer, Richard Kihlstrom, 1984 **Institutions, Behaviour and Economic Theory** Heinrich Bortis, 1997 This book is about the conceptual foundations of an intermediate way between liberalism and socialism From a standpoint of economic theory this middle way is conceived of as a synthesis of classical Ricardian and Keynesian political economy While the former deals with proportions between individuals or collectives and society in tackling the problems of distribution and value on the basis of the surplus principle the latter is concerned with the scale of economic activity as explained by the principle of effective demand Political economy pictures the economic aspects of the functioning of the institutional system within which the behaviour of individuals is embedded The economy considered is primarily neither a market nor a planned economy but rather a monetary production economy To establish an alternative to liberalism and socialism requires setting up a system of the social sciences In this work suggestions are made for linking political economy with other social sciences i.e. sociology law and politics in the traditional

sense thus establishing the unity of the social sciences In a Keynesian vein the social sciences are conceived of as moral sciences a view which gives rise to a specific philosophy of history To complete the picture issues of method associated with the theory of knowledge in the social sciences and the problem of linking theory with historical reality are also covered

Alternative Approaches to Economic Theory Victor A. Beker, 2019-06-11 The 2007 2008 financial crisis exposed the shortcomings of mainstream economic theory with economists unprepared to deal with it In the face of this a major rethinking of economics seems necessary and in presenting alternative approaches to economic theory this book contributes to the rebuilding of the discipline This volume brings together contributions from different perspectives and theoretical approaches that address the challenge of updating the economic theory corpus and seek to recover prestige for this discipline after the failure of neoclassical economics It addresses a range of topics including the complexity approach to economics category theory the Post Keynesian approach to micro and macroeconomics financialisation multidimensional analysis and ecological economics The book is aimed at economics scholars researchers academics and practitioners as well as upper undergraduates and graduates in this area of knowledge It may also be of interest for people interested in methodological issues in economics and the relationship between economic theory and the real world

Mathematical Models in Economics - Volume I Wei-Bin Zhang, 2009-06-10 Mathematical Models in Economics is a component of Encyclopedia of Mathematical Sciences in which is part of the global Encyclopedia of Life Support Systems EOLSS an integrated compendium of twenty one Encyclopedias This theme is organized into several different topics and introduces the applications of mathematics to economics Mathematical economics has experienced rapid growth generating many new academic fields associated with the development of mathematical theory and computer Mathematics is the backbone of modern economics It plays a basic role in creating ideas constructing new theories and empirically testing ideas and theories Mathematics is now an integral part of economics The main advances in modern economics are characterized by applying mathematics to various economic problems Many of today's profound insights into economic problems could hardly be obtained without the help of mathematics The concepts of equilibrium versus non equilibrium stability versus instability and steady states versus chaos in the contemporary literature are difficult to explain without mathematics The theme discusses on modern versions of some classical economic theories taking account of balancing between significance of economic issues and mathematical techniques These two volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs

Economic Theories and their Relational Structures E. Klein, 1998-01-19 An examination of the foundations of contemporary theoretical economics Applying concepts from model theory formal semantics and standard tools in foundations research the author aims three targets namely a characterization of the notion empirical economic theory the determination of the epistemological and methodological status of an important class of non empirical theories in

economics and the proposal of a taxonomy of economic theories based upon intended epistemological status and the descriptive or operative function of a theory *On the Reliability of Economic Models* Daniel Little, 1995-08-31 This volume represents a contribution to the philosophy of economics with a distinctive point of view the contributors have selected particular areas of economics and have probed these areas for the philosophical and methodological issues that they raise The primary essays are written by philosophers concentrating on philosophical issues that arise at the level of the everyday theoretical practice of working economists Commentary essays are provided by working economists responding to the philosophical arguments from the standpoint of their own disciplines The volume thus represents something of an experiment in the philosophy of science striving as it does to explore methodological issues across two research communities The purpose of the volume is very specific to stimulate a discussion of the epistemology and methodology of economics that works at the level of detail of existing best practice in economics today The contributors have designed their contributions to stimulate productive conversation between philosophers and economists on topics in the methodology of economics
