

Using Drones to Teach Modern Earth Science

*Timothy E. Slater, University of Wyoming College of Education

Abstract

Innovative Earth science educators are often looking for new ways to use technology to both teach modern Earth science and to use emerging technology to capture students' interests. In recent years, off-the-shelf drone aviation technology has simultaneously become amazingly user-friendly and inexpensive enough to be within reach of many classroom Earth science teachers. One only has to unveil a drone to students to hear their gasps of wonder and excitement. In response, teachers are finding ways to use the natural excitement surrounding drones to actively engage students in perfecting their developing precision flight skills to uniquely capture scientific images and data, efficient computer coding techniques for autonomous mapping flights, knowledge and understanding of FAA requirements for safe and legal drone piloting, understanding of transient weather conditions, and abilities in cinematic video editing to communicate scientific evidence and conclusions. To encourage student learning in these domains, we are initiating drone competitions across the state to help students highlight and celebrate their achievements.

Introduction

As human beings, many seem to be fascinated with escaping Earth's surface and taking to the skies. Aviation visionaries have long wondered how humans can soar by flying aircraft. In today's world, aircraft can effectively meet their goals without necessarily needing to carry human operators aloft. Unmanned, robotic aircraft have been around in one form or another for nearly 100 years, primarily as an emerging technology-based reconnaissance asset of military endeavors (Buckley, 1998). But in more recent years, increased attention to the technology of unmanned aerial vehicles (UAVs)—more commonly referred to as drones—is rapidly gaining attention across many constituents. Much of this recent growth in the public's drone awareness is due in large part to modern drones' capabilities to readily capture images, video, and scientific data in unique ways. Moreover, drone technology is becoming far less expensive to purchase and far easier to remotely program and pilot than drones were just a few years ago.

For innovative Earth science teachers, any low-cost, high-impact, data gathering technology that is easy to acquire and use is often of great interest. Modern drones fit this criterion and, as a result, are quickly finding their way into STEM classrooms and STEAM curricula across the world (viz.,
