Modern Methods In Complex Analysis:

Modern Methods in Complex Analysis Thomas Bloom, 1995-12-03 The fifteen articles composing this volume focus on recent developments in complex analysis Written by well known researchers in complex analysis and related fields they cover a wide spectrum of research using the methods of partial differential equations as well as differential and algebraic geometry The topics include invariants of manifolds the complex Neumann problem complex dynamics Ricci flows the Abel Radon transforms the action of the Ricci curvature operator locally symmetric manifolds the maximum principle very ampleness criterion integrability of elliptic systems and contact geometry Among the contributions are survey articles which are especially suitable for readers looking for a comprehensive well presented introduction to the most recent important developments in the field The contributors are R Bott M Christ J P D Angelo P Eyssidieux C Fefferman J E Fornæss H Grauert R S Hamilton G M Henkin N Mok A M Nadel L Nirenberg N Sibony Y T Siu F Treves and S M Webster [Complex Analysis - Methods, Trends, and Applications](#) Eberhard Lanckau, Wolfgang Tutschke, 1983-12-31 No detailed description available for Complex Analysis Methods Trends and Applications **Complex Analysis** Serge Lang, 2013-03-14 The present book is meant as a text for a course on complex analysis at the advanced undergraduate level or first year graduate level The first half more or less can be used for a one semester course addressed to undergraduates The second half can be used for a second semester at either level Somewhat more material has been included than can be covered at leisure in one or two terms to give opportunities for the instructor to exercise individual taste and to lead the course in whatever directions strikes the instructor's fancy at the time as well as extra reading material for students on their own A large number of routine exercises are included for the more standard portions and a few harder exercises of striking theoretical interest are also included but may be omitted in courses addressed to less advanced students In some sense I think the classical German prewar texts were the best Hurwitz Courant Knopp Bieberbach etc and I would recommend to anyone to look through them More recent texts have emphasized connections with real analysis which is important but at the cost of exhibiting succinctly and clearly what is peculiar about complex analysis the power series expansion the uniqueness of analytic continuation and the calculus of residues *Complex Analysis* Jane P. Gilman, Irwin Kra, Rubí E. Rodríguez, 2007-11-25 The authors aim here is to present a precise and concise treatment of those parts of complex analysis that should be familiar to every research mathematician They follow a path in the tradition of Ahlfors and Bers by dedicating the book to a very precise goal the statement and proof of the Fundamental Theorem for functions of one complex variable They discuss the many equivalent ways of understanding the concept of analyticity and offer a leisure exploration of interesting consequences and applications Readers should have had undergraduate courses in advanced calculus linear algebra and some abstract algebra No background in complex analysis is required [Complex Analysis and Geometry](#) Pierre Dolbeault, A. Iordan, G. Henkin, H. Skoda, J.-M. Trepreau, 2012-12-06 This meeting has been motivated by two events the 85th birthday of Pierre Lelong and the end of the

third year of the European network Complex analysis and analytic geometry from the programme Human Capital and Mobility For the first event Mathematicians from Poland Sweden United States and France whose work is particularly related to the one of P. Lelong have accepted to participate for the second the different teams of the Network sent lecturers to report on their most recent works These teams are from Grenoble Wuppertal Berlin Pisa and Paris VI in fact most of their results are also related to Lelong's work and a posteriori it is difficult to decide whether a talk is motivated by the first or by the second event We chose only plenary lectures usually of one hour except a small number given by young mathematicians which have been shorter A two hours problem session has been organized The Proceedings gather papers which are exact texts of the talks or are closely related to them The members from the Network and five other lecturers sent us papers the other lecturers published the content of their talks in mathematical Journals All the presented texts have been submitted to referees independent of the organizing committee the texts of the problems have been approved by their authors

Complex Geometry Ingrid Bauer, F. Catanese, Y. Kawamata, Thomas Peternell, Y.-T. Siu, 2011-06-28 This volume contains a collection of research papers dedicated to Hans Grauert on the occasion of his seventieth birthday Hans Grauert is a pioneer in modern complex analysis continuing the illustrious German tradition in function theory of several complex variables of Weierstrass Behnke Thullen Stein Siegel and many others When Grauert came on the scene in the early 1950's function theory was going through a revolutionary period with the geometric theory of complex spaces still in its embryonic stage A rich theory evolved with the joint efforts of many great mathematicians including Oka Kodaira Cartan and Serre The Cartan Seminar in Paris and the Kodaira Seminar provided important venues for its development Grauert together with Andreotti and Remmert took active part in the latter In his career he has nurtured a great number of his own doctoral students as well as other young mathematicians in his field from all over the world For a couple of decades his work blazed the trail and set the research agenda in several complex variables worldwide Among his many fundamentally important contributions which are too numerous to completely enumerate here are 1 The complete clarification of various notions of complex spaces 2 The solution of the general Levi problem and his work on pseudoconvexity for general manifolds 3 The theory of exceptional analytic sets 4 The Oka principle for holomorphic bundles 5 The proof of the Mordell conjecture for function fields 6 The direct image theorem for coherent sheaves

Potential Theory and Dynamics on the Berkovich Projective Line Matthew Baker, Robert S. Rumely, 2010-03-10 The purpose of this book is to develop the foundations of potential theory and rational dynamics on the Berkovich projective line over an arbitrary complete algebraically closed non-Archimedean field In addition to providing a concrete and elementary introduction to Berkovich analytic spaces and to potential theory and rational iteration on the Berkovich line the book contains applications to arithmetic geometry and arithmetic dynamics A number of results in the book are new and most have not previously appeared in book form Three appendices on analysis $\mathbb{R}$ trees and Berkovich's general theory of analytic spaces are included to make the book as

self contained as possible The authors first give a detailed description of the topological structure of the Berkovich projective line and then introduce the Hsia kernel the fundamental kernel for potential theory Using the theory of metrized graphs they define a Laplacian operator on the Berkovich line and construct theories of capacities harmonic and subharmonic functions and Green's functions all of which are strikingly similar to their classical complex counterparts After developing a theory of multiplicities for rational functions they give applications to non Archimedean dynamics including local and global equidistribution theorems fixed point theorems and Berkovich space analogues of many fundamental results from the classical Fatou Julia theory of rational iteration They illustrate the theory with concrete examples and exposit Rivera Letelier's results concerning rational dynamics over the field of p -adic complex numbers They also establish Berkovich space versions of arithmetic results such as the Fekete Szego theorem and Bilu's equidistribution theorem Complex Analysis with Applications Richard A.
