Came,W.A. Carter,2012-12-06 Today the basic mood of researchers and clinical investigators both at the center and on the periphery of interferon studies is optimistic regarding the future of interferons as therapeutic substances Many also feel these polypeptides will prove invaluable probes in unraveling certain fundamental biochemical processes which control the life cycle and developmental pattern of many human cells In contrast only a year or two ago this optimism had given way to an attitude almost of disenchantment as public and scientific expectations were raised steeply then rapidly waned as it turns out prematurely Both the multiple actions of interferons a virtual cascade of biochemical reactions may be induced as documented herein and the high visibility of interferon research provided by the millions of dollars invested both by national health agencies and by multinational pharmaceutical companies contributed to an upswing in public attention to drug development probably unprecedented in this century Virtually every

oncologist it would seem was plagued by requests for the experimental agent although they already had therapies of more proven value As recently as 1980 even though interferon had achieved success against certain cancers and certain viral diseases the variability in clinical results was seemingly ever present and little evidence emerged to suggest interferons could cure advanced diseases Why then the resurgence of an optimistic mood There are almost always many elements which contribute to happiness and this is certainly true of the broad frontier of interferon and its place in biochemical research and treatment

Traditional Processing Methods in Ethnopharmacology: Enhancing Therapeutic Effects and Unveiling Mechanisms of Action Lingyun Zhong, José Carlos Tavares Carvalho ,Bey Hing Goh, 2025-03-10 Ethnopharmacology investigates traditional medicines derived from diverse plants animals and minerals used by cultures worldwide Traditional processing methods may play a vital role in optimizing therapeutic effects reducing toxicity and improving overall properties of medicinal resources However the contrary may also be the case if for example toxic metabolites are extracted at a higher concentration These time honored techniques have been employed for centuries in traditional medicine to create effective and safe remedies Specialized processing techniques can even alter drug action sites or enhance the functional capabilities of medicinal substances As interest in TCM and other traditional medicines continues to grow researchers are striving to comprehend the scientific principles behind these processing methods and refine them for contemporary applications At the same time with our increasing understanding of medicinal plants chemical profiles therapeutic benefits and potential safety risks including interactions with other medications and direct toxicity there is a need to improve extraction techniques Optimized techniques may also reduce the environmental impact of such processing methods e g through reduced periods of decocting
