Cyclolinear Organosilicon Copolymers: Synthesis, Properties, Application Mukbaniani, Gennady Zaikov, 2023-01-06 The demand for organosilicon elastomers used in the production of thermally resistant rubbers and organosilicon polymers for making non metal composite materials is increasing from year to year This monograph presents a discussion on the methods used for synthesizing and studying properties of newly designed organosilicon polymers namely organosil

Elementorganic Monomers: Technology, Properties, Applications Khananashvili, Mukbaniani, Gennady Zaikov, 2006-06-09 New fields of science and technology call for new materials with valuable performance characteristics Long term resistance to such temperatures can be found only in polymers with chains made up of thermostable fragments Particularly interesting in this respect are elementorganic polymers with inorganic and organo inorganic molecular chains Elementorganic polymers are not only highly thermostable but also perform well under low temperatures sunlight humidity weather etc Thus these polymers especially silicones are widely and effectively used in

the electrical radio coal mechanical rubber aircraft metallurgical textile and other industries They are of great utility not only in industry but also in households and in medicine where their merits can hardly be overestimated The need to publish this book arose with the scientific and technical developments of the last decade the reconstruction and technical renovation of existing factories as well as fundamental changes in some syntheses of elementorganic monomers and polymers Moreover nowadays it is essential to train highly skilled chemical engineers with a comprehensive knowledge of current chemistry of the production technology of elementorganic monomers and polymers and of their characteristics and applications

Flame Retardants Johannes Karl Fink, 2020-08-18 This book focuses on the chemistry and applications of flame retardants for polymers and other materials It starts with a description and types of flame retardants as well as their properties and chemical structures to include chlorine and bromine containing flame retardants phosphorus based flame retardants nitrogen based flame retardants and silicones Inorganic materials that serve as flame retardants such as boron based additives graphenes and others are discussed in detail In addition the following subjects are discussed in detail Flame retardant polymers The mechanisms of flame retardants such as flame cooling synergetic effects degradation of flame retardants and others Other flame retardant compositions such as dripping inhibitors and smoke suppressants Testing methods for flame retardants international standards human health hazards such as smoke toxicity and problems with wastes Synthesis and fabrication methods as well as recycling methods The application of flame retardants to the coating material using 3D printing reactive coating and bulk addition methods Non burning comonomers foams nanocomposites and bio based materials Flame retardants with other textiles such as wool and electrical applications such as batteries Thermal

Oxidation of Polymer Blends Lyudmila Shibryaeva, Anatoly Popov, Gennady Zaikov, 2006-06-08 To identify the specific features of the kinetics of oxidation of polymer mixtures determine the key structural elements and create a model that can describe the mechanism of thermal oxidation of polymer mixtures it is necessary to determine the relation between the initial structure of a polymer mixture structural rearrangements associated with oxidation and the kinetics of the process The aim of this book is to elucidate the complicated problem concerning the connection between the structure and mechanism of oxidation of heterogeneous and heterophase polymer systems The material presented in this book concerns the specific features of the kinetics of oxidation and those of the structure of polymer systems The book deals with an analysis of the key factors that can affect principally the mechanism of thermal oxidation of polymer mixtures determines the role of the phase morphology structure of components and the interface layer or boundary in the kinetics of oxidation of heterophase system by an example of mixtures of polyolefines Along with the kinetics of oxidation of heterophase systems problems of investigation of their structural parameters in the oxidized state are considered With this aim the material presented in the book concerns not only the mechanism of oxidation of polymer mixtures but also homopolymers of diverse morphology and model systems **Photodegradation and Light Stabilization of Heterochain Polymers** Niyazi, Savenkova, 2006-11-14

Photodegradation and light stabilization are very important aspects of polymer aging Polymer degradation includes different types of processes thermodegradation oxidation acting of ozone photodegradation radiation hydrolysis mechanical degradation and biodegradation It is very important to know the mechanism of polymer degradation in order to select stabilizers against the degradation This volume presents the analysis of achievements in the field of photodegradation of polymers It includes first of all data of Russian investigators who have decisively contributed in the development of this field of knowledge the schools headed by academicians V V Korshak N M Emanuel N S Enikolopov A A Berlin and many others

Structure of the Polymer Amorphous State Kozlov, Gennady Zaikov, 2004-02-01 The basic problem of polymer physics is obtaining a structure properties correlations for their future application for practical purposes However these cannot be obtained without the development of a quantitative model of the polymer structure This problem has been actively investigated during the last 45 years
