Epstein MD,2014-02-18 With pink buckets of Kentucky Fried Chicken I m here for the boobs t

shirts and coffee cups and a pink ribbon celebrity dunk tank on The Ellen Degeneres Show a Mardi Gras culture has arisen around a deadly disease over the last decade The highly marketed pink ribbon criticized for being tied to pharmaceutical interests presents breast cancer as normal and pretty in pink Yet the statistics of breast cancer remain the same Expert on the preventative causes of cancer Dr Samuel S Epstein has been watching the debates around breast cancer for more than four decades He asks with all the talk about early detection mammograms improved treatment and the race for the cure why don't we ever hear about breast cancer prevention Dr Epstein knows the substantial research that has directly associated many factors of daily life with the development of the disease The steps that can be taken to prevent it are often amazingly simple but rarely make the headlines Here the evidence is presented and preventative choices are carefully and accessibly outlined In presenting this critical information that all Americans should know about Stop Breast Cancer Before it Starts empowers women to take charge of their health and make a real difference in the fight against cancer

Cancer Virus Hunters Gregory J. Morgan, 2022-08-02 Traces the history of the study of tumor viruses and its role in driving breakthroughs in cancer research Worldwide approximately one fifth of human cancers are caused by tumor viruses with hepatitis B virus and HPV being the leading culprits While the explosive growth in molecular biology in the late twentieth century is well known the role that the study of tumor viruses has played in driving many of the greatest breakthroughs is not Without the insights gained by studying tumor viruses many significant theoretical advancements over the last four decades in cellular and molecular biology would not have been made More practically the study of tumor viruses has saved thousands if not millions of lives In Cancer Virus Hunters Gregory J Morgan traces the high points in the development of tumor virology from Peyton Rous's pioneering work on chicken tumors in 1909 to the successful development of an HPV vaccine for cervical cancer in 2006 Morgan offers a novel approach to understanding the interconnectedness of a long series of biomedical breakthroughs including those that led to seven Nobel prizes Among other advances Morgan describes and contextualizes the science that prompted the discoveries of reverse transcriptase RNA splicing the tumor suppressor p53 the vaccine for hepatitis B and the HIV test He also explores how cancer virus hunters have demonstrated the virtue of beginning with a simple system even when investigating a complex disease like cancer Based on extensive archival research and over fifty interviews with experts Cancer Virus Hunters is a tour de force summarizing a century of research to show how discoveries made with tumor viruses came to dominate the contemporary understanding of cancer By showcasing the scientists themselves the book makes for an unusually accessible journey through the history of science It will be of interest to biomedical professionals especially in oncology hepatology and infectious disease in addition to historians of science and anyone interested in cancer research

p53 Sue Armstrong, 2014-11-20 All of us have lurking in our DNA a most remarkable gene which has a crucial job it protects us from cancer Known simply as p53 this gene constantly scans our

cells to ensure that they grow and divide without mishap as part of the routine maintenance of our bodies. If a cell makes a mistake in copying its DNA during the process of division, p53 stops it in its tracks, summoning a repair team before allowing the cell to carry on dividing. If the mistake is irreparable and the rogue cell threatens to grow out of control, p53 commands the cell to commit suicide. Cancer cannot develop unless p53 itself is damaged or prevented from functioning normally. Perhaps unsurprisingly, p53 is the most studied single gene in history. This book tells the story of medical science's mission to unravel the mysteries of this crucial gene and to get to the heart of what happens in our cells when they turn cancerous. Through the personal accounts of key researchers, *p53: The Gene that Cracked the Cancer Code* reveals the fascination of the quest for scientific understanding as well as the huge excitement of the chase for new cures, the hype, the enthusiasm, the lost opportunities, the blind alleys, and the thrilling breakthroughs. And as the long anticipated revolution in cancer treatment, tailored to each individual patient's symptoms, begins to take off at last, p53 remains at the cutting edge. This timely tale of scientific discovery highlights the tremendous recent advances made in our understanding of cancer, a disease that affects more than one in three of us at some point in our lives. [Japanese Science](#) Samuel Coleman, 1999-09-09 This ethnographic study of Japan's scientists looks firsthand at career structures and organizational issues that have hampered the advancement of scientists and scientific research in Japan. It provides analysis of the problem of career mobility in science, the status quo in university and government laboratories, relations between scientists and [Women Scientists in America](#) Margaret W. Rossiter, 2012-04-02 With the thoroughness and resourcefulness that characterize the earlier volumes, she recounts the rich history of the courageous and resolute women determined to realize their scientific ambitions. *The Cambridge History of the American Essay* Christy Wampole, Jason Childs, 2023-12-14 From the country's beginning essayists in the United States, who have used their prose to articulate the many ways their individuality has been shaped by the politics, social life, and culture of this place, *The Cambridge History of the American Essay* offers the fullest account to date of this diverse and complex history. From Puritan writings to essays by Indigenous authors, from Transcendentalist and Pragmatist texts to Harlem Renaissance essays, from New Criticism to New Journalism, the story of the American essay is told here, beginning in the early eighteenth century and ending with the vibrant, heterogeneous scene of contemporary essayistic writing. The essay in the US has taken many forms: nature writing, travel writing, the genteel tradition, literary criticism, hybrid genres such as the essay film and the photo essay. Across genres and identities, this volume offers a stirring account of American essayism into the twenty-first century. **The Billion-Dollar Molecule** Barry Werth, 2013-08-20 Join journalist Barry Werth as he pulls back the curtain on Vertex, a start-up pharmaceutical company, and witness firsthand the intense drama being played out in the pioneering and hugely profitable field of drug research. Founded by Joshua Boger, a dynamic Harvard and Merck-trained scientific whiz kid, Vertex is dedicated to designing atom by atom both a new life-saving immunosuppressant drug and a drug to combat the virus that causes AIDS. You will be hooked from start to finish as you go

from the labs where obsessive fiercely competitive scientists struggle for a breakthrough to Wall Street where the wheeling and dealing takes on a life of its own as Boger courts investors and finally decides to take Vertex public Here is a fascinating no holds barred account of the business of science which includes an updated epilogue about the most recent developments in the quest for a drug to cure AIDS [Japanese Business](#) Schon Beechler,Kristin Stucker,1998 [The Canon](#) Natalie Angier,2008-04-03 The New York Times bestseller that makes scientific subjects both understandable and fun Every sentence sparkles with wit and charm Richard Dawkins From the Pulitzer Prize winning New York Times science journalist and bestselling author of *Woman this is a playful passionate guide to the science all around us and inside us* from physics to chemistry biology geology astronomy and more Drawing on conversations with hundreds of the world s top scientists Natalie Angier creates a thoroughly entertaining guide to scientific literacy For those who want a fuller understanding of some of the great issues of our time The Canon offers insights on stem cells bird flu evolution and global warming For students or parents whose kids ask a lot of questions about how the world works it brings to life such topics as how the earth was formed or what electricity is Also included are clear fascinating explanations of how to think scientifically and grasp the tricky subject of probability The Canon is a joyride through the major scientific disciplines that reignites our childhood delight and sense of wonder and along the way tells us what is actually happening when our ice cream melts or our coffee gets cold what our liver cells do when we eat a caramel why the horse is an example of evolution at work and how we re all really made of stardust **Axelrod & Cooper's Concise Guide to Writing** Rise B.
