 Pesticides* Shree Nath Singh,2016-09-12 This book focuses on the microbial degradation of endosulfan lindane chlorophenols
 organochlorine aldrin dieldrin isoproturon and atrazine etc which are commonly used in crop fields to kill the pests Further it
 illustrates the role of degradative enzymes metabolic pathways of degradation toxicity of metabolites and the factors
 regulating the pesticide degradation In view of persistence of synthetic pesticides scientists have discovered suitable
 microbes such as bacteria fungi and algae naturally occurring or genetically engineered over the years After successful trials
 under laboratory and field conditions these microbes are being used to degrade chemical pesticides in agriculture As of now
 2 56 billion kg of chemical pesticides is used every year to protect agricultural fields against pest attack These technologies
 have been found to be highly effective eco friendly and cost effective without disturbing the agro ecosystems As this book
 contains review articles contributed by various researchers from different countries whose work demonstrates recent
 advances in microbial degradation of pesticides it will serve as a ready reckoner and also a valuable quick reference guide for
 scientists academicians cultivators and industrialists alike **Microbial Rejuvenation of Polluted Environment** Charles

Climate Change, Intercropping, Pest Control and Beneficial Microorganisms Eric Lichtfouse,2009-09-23 Sustainable

agriculture is a rapidly growing field aiming at producing food and energy in a sustainable way for humans and their children. Sustainable agriculture is a discipline that addresses current issues such as climate change, increasing food and fuel prices, poor nutrition, starvation, obesity, water pollution, soil erosion, fertility loss, pest control, and biodiversity depletion. Novel environmentally friendly solutions are proposed based on integrated knowledge from sciences as diverse as agronomy, soil science, molecular biology, chemistry, toxicology, ecology, economy, and social sciences. Indeed, sustainable agriculture deciphers mechanisms of processes that occur from the molecular level to the farming system to the global level at time scales ranging from seconds to centuries. For that, scientists use the systems approach that involves studying components and interactions of a whole system to address scientific, economic, and social issues. In that respect, sustainable agriculture is not a classical narrow science. Instead of solving problems using the classical painkiller approach that treats only negative impacts, sustainable agriculture treats problem sources. Because most actual society issues are now intertwined, global and fast-developing sustainable agriculture will bring solutions to build a safer world. This book series gathers review articles that analyze current agricultural issues and knowledge, then propose alternative solutions. It will therefore help all scientists, decision makers, professors, farmers, and politicians who wish to build a safe agriculture, energy, and food system for future generations.

Microbial Metabolism of Xenobiotic Compounds Pankaj Kumar Arora, 2019-06-27. Xenobiotic compounds including pesticides, nitrophenols, pyridine, polycyclic aromatic compounds, and polychlorinated biphenyls are widely spread in the environment due to anthropogenic activities. Most of them are highly toxic to living beings due to their mutagenic and carcinogenic properties. Therefore, the removal of these compounds from the environment is an essential step for environmental sustainability. Microbial remediation has emerged as an effective technology for degradation of these xenobiotic compounds as microorganisms have a unique ability to utilize these compounds as their sole source of carbon and energy. The primary goal of this book is to provide detailed information of microbial degradation of many xenobiotic compounds in various microorganisms.

Microbial Biotechnology in Environmental Monitoring and Cleanup Pankaj, Sharma, Anita, 2018-01-30. Pollutants are increasing day by day in the environment due to human interference. Thus, it has become necessary to find solutions to clean up these hazardous pollutants to improve human, animal, and plant health. Microbial Biotechnology in Environmental Monitoring and Cleanup is a critical scholarly resource that examines the toxic, hazardous substances and their impact on the environment. Featuring coverage on a broad range of topics such as pollution of microorganisms, phytoremediation, and bioremediation, this book is geared towards academics, professionals, graduate students, and practitioners interested in emerging techniques for environmental decontamination.

Environmental Impacts of Microbial Insecticides Heikki M.T. Hokkanen, Ann Hajek, 2013-06-29. Biological pesticides are increasingly finding their place in IPM, and increasing numbers of products are making their way to the marketplace. Particularly in China, Latin America, and Australia, implementation is proceeding on a large scale. However, in the USA and Europe, registration

procedures for insect pathogens to be used for insect control have been established that require low levels of risk resulting in costs of retarding the implementation of microbial agents. This book provides a review of the state of the art of studies on the environmental impact of microbial insecticides. It originates from a Society for Invertebrate Pathology Microbial Control Division Symposium Assessment of environmental safety of biological insecticides organised in collaboration with the EU ERBIC research project FAIR5 CT97 3489. This symposium was initiated by Heikki Hokkanen and Chris Lomer and was held at the SIP Annual Meeting in 2001 in The Netherlands. The emphasis in this book is on large scale use of microbial agents for insect control demonstrating how this use has been proceeding with minimal environmental impact. This book is intended to be of use to regulatory authorities in determining whether further studies in certain areas are necessary and how to conduct them if needed or whether sufficient information has been collected already to permit full registration of many of these biological control agents.

Fungi As Biocontrol Agents T. M. Butt, C. Jackson, N. Magan, 2001. There is increasing interest in the use of fungi for the control of pests, weeds and diseases. This book brings together perspectives from pathology, ecology, genetics, physiology, production technology to address the use of fungi as biological control agents.
