

The Real-Time Specification for Java

Lecture aims

- To give the background of the **RTSJ** and the NIST requirements
- To provide an introduction to
 - Memory management
 - Time values and clocks
 - Schedulable objects and scheduling

Real Time Specification For Java

Jean-Pierre Rosen, Alfred Strohmeier

Real Time Specification For Java:

The Real-time Specification for Java Gregory Bollella, 2000 Real time programming is a critical component in the development of many consumer and industrial devices The long awaited Real Time Java specification has arrived delivering the powerful benefits of Java to the embedded software development community The Real Time Specification for Java introduces the new specification in detail giving developers all the information and insight they need to start building powerful Java based software The book is the definitive reference to the semantics extensions and modifications to the Java programming language that enable the Java platform to meet the requirements and constraints of real time development For all Java programmers embedded systems programmers and system architects

Real-time Java Platform Programming

Peter Dibble, 2002 Annotation Build powerful real time Java TM TM platform applications The complete reference to the Real Time Specification for Java RTSJ for every Java developer who wants to master real time programming Covers practical real time development considerations scheduling theory garbage collection rate monotonic analysis and other key issues Closures thread interrupt asynchronous events timers CT physical and immortal memory program structure distributed RT applications exceptions and more Real time programming is critical to the development of a wide range of consumer industrial system and military devices Using the new Real Time Specification for Java RTSJ developers can create verify analyze execute and manage Java code that ensures the correctness timeliness and execution predictability that are essential to real time programming This book written by one of RTSJ s creators offers a practical introduction to real time programming for every Java developer even those with no real time experience at all Replete with example code this book gives any Java developer the skills and expertise to build powerful real time applications Peter Dibble begins with an overview of the key issues associated with Java real time development He covers garbage collection priority scheduling and deadline scheduling in real time environments then introduces rate monotonic analysis a powerful set of techniques for analyzing timing be

Handbook of Real-Time and Embedded Systems Insup Lee, Joseph Y-T. Leung, Sang H.

Son, 2007-07-23 Real time and embedded systems are essential to our lives from controlling car engines and regulating traffic lights to monitoring plane takeoffs and landings to providing up to the minute stock quotes Bringing together researchers from both academia and industry the Handbook of Real Time and Embedded Systems provides comprehensive coverage

Coordination Models and Languages John Field, Vasco Thudichum Vasconcelos, 2009-05-25 This book constitutes the refereed proceedings of the 11th International Conference on Coordination Models and Languages COORDINATION 2009 held in Lisbon Portugal in June 2009 as one of the federated conferences on Distributed Computing Techniques DisCoTec 2009 The 14 revised full papers presented were carefully reviewed and selected from 61 submissions The subject matter is to explore the spectrum of languages middleware services and algorithms that separate behavior from interaction therefore increasing modularity simplifying reasoning and ultimately enhancing software development

Embedded Systems

Kiyofumi Tanaka,2012-03-02 Nowadays embedded systems the computer systems that are embedded in various kinds of devices and play an important role of specific control functions have permitted various aspects of industry Therefore we can hardly discuss our life and society from now onwards without referring to embedded systems For wide ranging embedded systems to continue their growth a number of high quality fundamental and applied researches are indispensable This book contains 19 excellent chapters and addresses a wide spectrum of research topics on embedded systems including basic researches theoretical studies and practical work Embedded systems can be made only after fusing miscellaneous technologies together Various technologies condensed in this book will be helpful to researchers and engineers around the world

High Assurance Services Computing Jing Dong,Raymond Paul,Liang-Jie Zhang,2009-05-28 Service computing is a cutting edge area popular in both industry and academia New challenges have been introduced to develop service oriented systems with high assurance requirements High Assurance Services Computing captures and makes accessible the most recent practical developments in service oriented high assurance systems An edited volume contributed by well established researchers in this field worldwide this book reports the best current practices and emerging methods in the areas of service oriented techniques for high assurance systems Available results from industry and government R D laboratories and academia are included along with unreported results from the hands on experiences of software professionals in the respective domains Designed for practitioners and researchers working for industrial organizations and government agencies High Assurance Services Computing is also suitable for advanced level students in computer science and engineering

Software Technologies for Embedded and Ubiquitous Systems Roman Obermaisser,Yunmook Nah,Peter Puschner,Franz J. Rammig,2007-09-17 This book constitutes the thoroughly refereed post proceedings of the 5th IFIP WG 10 2 International Workshop on Software Technologies for Future Embedded and Ubiquitous Systems SEUS 2007 held in conjunction with ISORC 2007 the 10th IEEE International Symposium on Object component service oriented Real time Distributed Computing Coverage includes ubiquitous computing frameworks validation of embedded and ubiquitous systems and ubiquitous computing applications

On The Move to Meaningful Internet Systems 2003: OTM 2003 Workshops Zahir

Tari,2003-10-25 missions in fact also treat an envisaged mutual impact among them As for the 2002 edition in Irvine the organizers wanted to stimulate this cross pollination with a program of shared famous keynote speakers this year we got Sycara ble Soley and Mylopoulos and encouraged multiple attendance by providing authors with free access to another conference or workshop of their choice We received an even larger number of submissions than last year for the three conferences 360 in total and the workshops 170 in total Not only can we therefore again claim a measurable success in attracting a representative volume of scientific papers but such a harvest allowed the program committees of course to compose a high quality cross section of worldwide research in the areas covered In spite of the increased number of submissions the Program Chairs of the three main conferences decided to accept only approximately the same number of

papers for presentation and publication as in 2002 i.e. around 1 paper out of every 4-5 submitted. For the workshops the acceptance rate was about 1 in 2. Also for this reason we decided to separate the proceedings into two volumes with their own titles and we are grateful to Springer Verlag for their collaboration in producing these two books. The reviewing process by the respective program committees was very professional and each paper in the main conferences was reviewed by at least three referees.

On The Move to Meaningful Internet Systems 2003: OTM 2003 Workshops R. Meersman, Zahir Tari, 2003-10-30. This book constitutes the joint refereed proceedings of six international workshops held as part of OTM 2003 in Catania, Sicily, Italy, in November 2003. The 80 revised full workshop papers presented together with various abstracts and summaries were carefully reviewed and selected from a total of 170 submissions. In accordance with the workshops the papers are organized in topical main sections on industrial issues, human computer interface for the semantic Web and Web applications, Java technologies for real time and embedded systems, regulatory ontologies and the modelling of complaint regulations, metadata for security and reliable and secure middleware.

Integration Technologies for Industrial Automated Systems Richard Zurawski, 2018-10-03. If there exists a single term that summarizes the key to success in modern industrial automation, the obvious choice would be integration. Integration is critical to aligning all levels of an industrial enterprise and to optimizing each stratum in the hierarchy. While many books focus on the technological components of enterprise information systems, *Integration Technologies for Industrial Automated Systems* is the first book to present a comprehensive picture of the technologies, methodologies, and knowledge used to integrate seamlessly the various technologies underlying modern industrial automation and information systems. In chapters drawn from two of Zurawski's popular works, *The Industrial Communication Technology Handbook* and *The Industrial Information Technology Handbook*, this practical guide offers tutorials, surveys, and technology overviews contributed by experts from leading industrial and research institutions from around the world. The book is organized into sections for cohesive and comprehensive treatment. It examines e technologies, software and IT technologies, communication network based technologies, agent based technologies, and security in detail, as well as their role in the integration of industrial automated systems. For each of these areas, the contributors discuss emerging trends, novel solutions, and relevant standards. Charting the course toward more responsive and agile enterprise, *Integration Technologies for Industrial Automated Systems* gives you the tools to make better decisions and develop more integrated systems.

Reliable Software Technologies - Ada-Europe 2001 Dirk Craeynest, Alfred Strohmeier, 2003-06-29. The Sixth International Conference on Reliable Software Technologies Ada Europe 2001 took place in Leuven, Belgium, May 14-18, 2001. It was sponsored by Ada Europe, the European federation of national Ada societies, in cooperation with ACM SIGAda, and it was organized by members of the K.U. Leuven and Ada Belgium. This was the 21st consecutive year of Ada Europe conferences and the sixth year of the conference focusing on the area of reliable software technologies. The use of software components in embedded systems is almost ubiquitous: planes fly by wire, train signalling

systems are now computer based mobile phones are digital devices and biological chemical and manufacturing plants are controlled by software to name only a few examples Also other non embedded mission critical systems depend more and more upon software For these products and processes reliability is a key success factor and often a safety critical hard requirement It is well known and has often been experienced that quality cannot be added to software as a mere afterthought This also holds for reliability Moreover the reliability of a system is not due to and cannot be built upon a single technology A wide range of approaches is needed the most difficult issue being their purposeful integration Goals of reliability must be precisely defined and included in the requirements the development process must be controlled to achieve these goals and sound development methods must be used to fulfill these non functional requirements *Embedded Systems Design* Bruno Bouyssounouse,2005-03-30 This extensive and increasing use of embedded systems and their integration in everyday products mark a significant evolution in information science and technology Nowadays embedded systems design is subject to seamless integration with the physical and electronic environment while meeting requirements like reliability availability robustness power consumption cost and deadlines Thus embedded systems design raises challenging problems for research such as security reliable and mobile services large scale heterogeneous distributed systems adaptation component based development and validation and tool based certification This book results from the ARTIST FP5 project funded by the European Commission By integration 28 leading European research institutions with many top researchers in the area this book assesses and strategically advances the state of the art in embedded systems The coherently written monograph like book is a valuable source of reference for researchers active in the field and serves well as an introduction to scientists and professionals interested in learning about embedded systems design **Middleware 2007** Renato Cerqueira,Roy H. Campbell,2007-11-01 This book constitutes the refereed proceedings of the ACM IFIP USENIX 8th International Middleware Conference 2007 held in Newport Beach CA USA in November 2007 The 22 revised full papers presented were carefully reviewed and selected from 108 submissions The papers are organized in topical sections on component based middleware mobile and ubiquitous computing grid and cluster computing enhancing communication resource management reliability and fault tolerance Reliable Software Technologies - Ada-Europe 2007 Nabil Abdennahder,Fabrice Kordon,2007-06-30 *Reliable Software Technologies* is an annual series of international conferences devoted to the promotion and advancement of all aspects of reliable software technologies The objective of this series of conferences initiated and sponsored by Ada Europe the European federation of national Ada societies is to provide a forum to promote the development of reliable softwares both as an industrial technique and an academic discipline Previous editions of the *Reliable Software Technologies* conference were held in Porto Portugal in 2006 York UK in 2005 Palma de Mallorca Spain in 2004 Toulouse France in 2003 Vienna Austria in 2002 Leuven Belgium in 2001 Potsdam Germany in2000 Santander Spain in1999 Uppsala Sweden in 1998 London UK in 1997 and Montreux Switzerland in 1996 The 12th International Conference on Reliable Software Technologies

took place in Geneva Switzerland June 25-29 2007 under the continued sponsoring of Ada Europe in cooperation with ACM SIGAda. It was organized by members of the University of Applied Sciences Western Switzerland Engineering School of Geneva in collaboration with colleagues from various places in Europe. The 13th conference in 2008 will take place in Venice Italy.

Reliable Software Technologies -- Ada-Europe 2003 Jean-Pierre Rosen, Alfred Strohmeier, 2003-08-03. The refereed proceedings of the 8th International Conference on Reliable Software Technologies Ada Europe 2003 held in Toulouse France in June 2003. The 29 revised full papers presented together with 3 invited papers were carefully reviewed and selected from numerous submissions. The papers are organized in topical sections on Ravenscar language issues static analysis distributed information systems software metrics software components formal specification real time kernel software testing and real time systems design.

COMPUTER-BASED INDUSTRIAL CONTROL, Second Edition Kant, Krishna, 2011-07-30. This book now in its second edition presents in a comprehensive manner the fundamentals of computer based control of industrial processes. Intended primarily for undergraduate and postgraduate students of instrumentation electronics engineering the book will also be immensely useful for professionals and researchers in these fields. The book begins with a thorough introduction to automation its history utility and the current scenario. It then moves on to discuss in detail the techniques components subsystems and system architectures relevant to process control. The control techniques covered include classical controls as well as newer controls such as model based adaptive control self tuning control expert systems and fuzzy logic control. The components consist of sensors and actuators of various types. The subsystems covered are SCADA systems remote terminal units for telemetry and telecontrol programmable controllers distributed digital controllers and personal computers. Also included are real time operating systems and real time programming languages. The major architectures discussed are distributed digital control distributed SCADA system and multi microprocessor architectures. The book thoroughly covers the various technological developments in this field. It also covers through a number of case studies the applications of computer based control in major industries. The second edition contains substantially revised and updated content on a large number of topics covered in the first edition.

JavaTech, an Introduction to Scientific and Technical Computing with Java Clark S. Lindsey, Johnny S. Tolliver, Thomas Lindblad, 2005-10-13. JavaTech demonstrates the ease with which Java can be used to create powerful network applications and distributed computing applications. It can be used as a textbook for introductory or intermediate level programming courses and for more advanced students and researchers who need to learn Java for a particular task. JavaTech is up to date with Java 5.0.

BOOK JACKET Middleware 2008 Valérie Issarny, Richard E. Schantz, 2008-11-23. This volume contains the proceedings of the International Middleware Conference held in Leuven Belgium during December 1-4 2008. This year marked the ninth rendition of this annual conference in its current format initially opted in 1998 aspiring to serve as the premier venue focusing exclusively on important middleware results. A lot has happened over the intervening 10 year span.

Middleware has become pervasive in an increasingly interconnected world with its concepts now securely embedded in the notional architectures driving forward the information age. The conference continues to be a focal point for important new initiatives and results for new generations of middleware. With each succeeding year it has become an even more competitive publishing venue further extending its selectivity this year as well. Of the 117 submissions by 21 were able to receive acceptance invitations for an acceptance rate of less than 18%. Competitive indeed. Additionally these submissions continue to come from all over the globe spanning authors from 23 countries. A truly world wide endeavor. But other things have also changed as we turn the corner on the first decade of this conference. In many ways middleware has achieved significant success where it really counts in terms of technical innovations, advanced capabilities, successful ideas and embedded systems which permeate society, industry, government and academia. With this success comes maturity.

The Industrial Information Technology Handbook Richard Zurawski, 2018-10-03. The Industrial Information Technology Handbook focuses on existing and emerging industrial applications of IT and on evolving trends that are driven by the needs of companies and by industry led consortia and organizations. Emphasizing fast growing areas that have major impacts on industrial automation and enterprise integration, the Handbook covers topics such as industrial communication technology, sensors and embedded systems. The book is organized into two parts. Part 1 presents material covering new and quickly evolving aspects of IT. Part 2 introduces cutting edge areas of industrial IT. The Handbook presents material in the form of tutorials, surveys and technology overviews combining fundamentals and advanced issues with articles grouped into sections for a cohesive and comprehensive presentation. The text contains 112 contributed reports by industry experts from government companies at the forefront of development and some of the most renowned academic and research institutions worldwide. Several of the reports on recent developments, actual deployments and trends cover subject matter presented to the public for the first time.

On the Move to Meaningful Internet Systems 2004: OTM 2004 Workshops Zahir Tari, Angelo Corsaro, 2004-10-14. A special mention for 2004 is in order for the new Doctoral Symposium Workshop where three young postdoc researchers organized an original setup and formula to bring PhD students together and allow them to submit their research proposals for selection. A limited number of the submissions and their approaches were independently evaluated by a panel of senior experts at the conference and presented by the students in front of a wider audience. These students also got free access to all other parts of the OTM program and only paid a heavily discounted fee for the Doctoral Symposium itself. In fact their attendance was largely sponsored by the other participants. If evaluated as successful it is the intention of the General Chairs to expand this model in future editions of the OTM conferences and so draw in an audience of young researchers to the OnTheMove forum. All three main conferences and the associated workshops share the distributed aspects of modern computing systems and the resulting application created by the Internet and the so called Semantic Web. For DOA 2004 the primary emphasis stayed on the distributed object infrastructure. For ODBASE 2004 it was the knowledge

bases and methods required for enabling the use of formal semantics and for CoopIS 2004 the main topic was the interaction of such technologies and methods with management issues such as occurs in networked organizations. These subject areas naturally overlap and many submissions in fact also treat envisaged mutual impacts among them.
