Glimpsing Reality Paul & F David Buckley & Peat, 2013-04-15 Originally published in 1979 This reprints the revised and expanded edition of 1996 In this volume physicists biologists and chemists who have been involved in some of the most exciting discoveries in modern scientific thought explore issues which have shaped modern physics and which hint at what may form the next scientific revolution The major issues discussed are the understanding of time and space quantum and relativity theories and recent attempts to unite them and related questions in theoretical biology The Reality of the Unobservable E. Agazzi, M. Pauri, 2013-04-17 Observability and Scientific Realism It is commonly thought that the birth of modern natural science was made possible by an intellectual shift from a mainly abstract and speculative conception of the world to a carefully elaborated image based on observations There is some grain of truth in this claim but this grain depends very much on what one takes observation to be In the philosophy of science of our century observation has been practically equated with sense perception This is understandable if we think of the attitude of radical empiricism that inspired Ernst Mach and the philosophers of the Vienna Circle who powerfully influenced our century's philosophy of science However this was not the attitude of the founders of modern science Galileo for example expressed in a famous passage of the Assayer the conviction that perceptual features of the world are merely subjective and are produced in the anima by the motion and impacts of unobservable particles that are endowed uniquely with mathematically expressible properties and which are therefore the real features of the world Moreover on other occasions when defending the Copernican theory he explicitly remarked that in admitting that the Sun is static and the Earth turns on its own axis reason must do violence to the sense and that it is thanks to this violence that one can know the true constitution of the universe **Schools of Democracy** Julien Talpin, 2024-10-31 Schools of Democracy offers a vivid analysis of the long term impact of engagement in participatory budgeting institutions in Europe While democratic innovations flourish around the world there have been great hopes for their potential to revitalize representative government and solve the increasing apathy of the public Based on a rich ethnographic study in France Italy and Spain this book shows how participatory institutions can encourage personal involvement by creating the procedural and social conditions conducive to the formation of a competent and involved citizenry Rather than deliberation itself it seems that informal discussions and interactions between a diverse public allow mutual learning and the beginning of a political trajectory for people at the margins of the public sphere However this book also shows that citizens can become disappointed by the little decision making power they are granted as they leave the process often more cynical than before Contains A unique study on the long term individual impact of engagement in participatory institutions While most research deal with short term impact Schools of democracy addresses impact of participation after two years of engagement Unique access to the black box of participatory institutions While research on democratic innovations generally opt for an externalist perspective Schools of democracy details the routine of deliberative

interactions showing how ordinary citizens speak up in public assemblies From this perspective the book offers incredibly rich empirical material coming from ethnographic research on how participatory democracy works An original theoretical framework to the study of the individual impacts of participatory engagement While most research are based on an implicit rational choice perspective the pragmatist perspective adopted here sheds a different light on the studied phenomenon stressing the co construction of actors and their environment

Physical Reality and Mathematical Description C.P. Enz,J. Mehra,2012-12-06 This collection of essays is intended as a tribute to Josef Maria Jauch on his sixtieth birthd Through his scientific work Jauch has justly earned an honored name in the community of theo retical physicists Through his teaching and a long line of dis tinguished collaborators he has put an imprint on modern mathema tical physics A number of Jauch s scientific collaborators friends and admirers have contributed to this collection and these essays reflect to some extent Jauch s own wide interests in the vast do main of theoretical physics Josef Maria Jauch was born on 20 September 1914 the son of Josef Alois and Emma nee Conti Jauch in Lucerne Switzerland Love of science was aroused in him early in his youth At the age of twelve he came upon a popular book on astronomy and an exam ple treated in this book mystified him It was stated that if a planet travels around a centre of Newtonian attraction with a pe riod T and if that planet were stopped and left to fall into the centre from any point of the circular orbit it would arrive at the centre in the time $T/3$ Young Josef puzzled about this for several months until he made his first scientific discovery that this result could be derived from Kepler s third law in a quite elementary way

Critical Perspectives on Literature and Culture in the New World Order Washima Che Dan,Jason Sanjeev Ganesan,Noritah Omar,2012-11-15 The fifteen chapters in this volume explore both new and tested theoretical perspectives on literature and culture at large this multiplicity of discourses is a reflection of the implicit discontent in conforming to the New World Order and a contestation against hierarchical relationships between countries which inform the social cultural and political climates of weaker nations With the political and economic hegemony of stronger nations weaker nations run the risk of being dominated or at the very least having their own national identity and sovereignty steeped in ambivalence in the face of a globalised culture This volume hopes to bring together critical views in relation to the construction of cultural studies in the Western framework the application of literary theory in the readings of vernacular literature contestation of the mainstream scientistic methodology of cultural evaluation the role of English literature in Asian cultures the application of postcolonial theory in literature literary ethics in relation to Islamic literature as well as the Islamic and Western conceptions of democracy More than half of the articles in this collection centre on Islam as a guiding principle or as a context through which critical perspectives are made on literature and culture in today s globalised world order This inadvertent foregrounding of Islam reflects a continuing dialogue on and with Islam and its significant impact on existing academic discourses founded upon Western style scholarship
